ʿUmar's *dīwān* represents the most conspicuous and voluminous example of Ḥidjāzī *ghazal*, although it is not without its accretions and falsifications. The emergence of this phenomenon, together with its bed-fellow ʿUdhrī *ghazal*, has been variously explained, largely in socio-economic terms (the disintegration of tribal society, though this was not as profoundly impacted upon by Islam as has been supposed; the influx of Persian and Levantine slaves, with their artistic traditions, into al-Ḥidjāz; the emergence of a leisured aristocracy and a *jeunesse dorée*: see S. Enderwitz, *Liebe als Beruf. Al-ʿAbbās ibn al-Aḥnaf und das Ġazal*, Beirut 1995, 12-16) and in political terms (the relocation of imperial power from Medina to Damascus) and has been tied to the prevalence of Mecca and Medina as settings for ʿUmar's amorous escapades. There is no proof that ʿUmar's verse was composed in either place: they may be imaginative settings (*pace* J.-C. Vadet's characterisation of him as a pure Ḥidjāzī, in terms both literary and geographical: *L'Esprit courtois en Orient*, Paris 1968, 112); on the fictionality of ʿUmar's poetry, see further Enderwitz, *op. cit.*, 124-6. It is not known whether independent love poems were composed in the pre-Islamic period, although mediaeval literary opinion avers that the *nasīb* was incorporated into the polythematic ode early in the 6th century. Consequently, the poetic tradition in which ʿUmar was composing is obscure and modern explanations of the emergence of *ghazal* do not consider this; Wagner remarks that Abū Dahbal al-Djumaḥī [*q.v.*] and Ḳays b. Dharīḥ composed independent love songs before ʿUmar (*Grundzüge*, ii, 61). J.-C. Vadet's account (43-118) at least has the merit of considering aesthetic considerations, although he overstates the importance of the influence of singer on poet in terms of subject-matter, though not of metre, commissioning or popularising. R. Jacobi has discussed the role of Abū Dhu'ayb [*q.v.*] in the transition from *nasīb* to *ghazal* (*Die Anfänge der arabischen Ġazalpoesie: Abū Ḏu'aib al-Huḏalī*, in *Isl.*, lxi [1984], 218-50; eadem, *Time and reality in* nasīb *and* ghazal, in *JAL*, xvi [1985], 1-17), and ʿUmar's Ḥidjāzī *ghazal* can be explained exclusively in literary terms, as the appropriation (perhaps reclamation) of the *nasīb* as *mufākhara* [*q.v.*] (typified by Imru' al-Ḳays) from the *ḳaṣīda* (although ʿUmar also feels free to use themes and motifs of the *nasīb*, e.g. concluding one poem, Schwarz no. 9, with the deserted encampment) and from the past (in the manner of Abū Dhu'ayb, although ʿUmar's lack of sentimentality in his occasional treatment of the past is singular, e.g. Schwarz no. 299): his oft-mentioned poetic characterisation of women and their independence renders them more of a challenge for, and therefore upon possession more of a testimony to, his erotic (heroic) élan. ʿUdhrī *ghazal* is also a literary development from the pre-Islamic heritage, in counteraction to the ephemeralness of Ḥidjāzī love. It would be unwise to exclude consideration of the *ghazal* as a literary and antinomian response to the eschatological prescriptions of the Ḳur'ān.

A taxonomic analysis of the 333 poems and 109 fragments in ʿUmar's *dīwān* should be effected on the principles established by Th. Bauer for Abū Tammām [*q.v.*] (*Abū Tammām's contribution to ʿAbbāsid* ġazal *poetry*, in *JAL*, xxvii (1996), 13 ff.), focused on his four categories of courting, message, report (type 1: description; type 2: event) and complaint, thereby establishing the relative frequency of poems of amorous adventure (i.e. narratives, often of astonishing inventiveness and unpredictability) and of declarations of undying or unfulfilled love and facilitating a proper appreciation of the role of ʿUdhrī love in his *ghazal*. Such an analysis has partially been undertaken by Audebert (see *Bibl.*), though from different premises. The selective process of transmission may also have eliminated many poems which do not conform to the received picture of ʿUmar; still extant, for example, are some pieces of tribal *mufākhara* (e.g. Schwarz, nos. 197, 205), panegyric (e.g. Schwarz, no. 247) and a *marthiya* [*q.v.*] (Schwarz, no. 222), suggesting poetic activity of a more traditional sort. The complete picture of ʿUmar the poet has yet to be drawn.

ʿUMAR B. **ʿALĪ** [see IBN AL-FĀRIḌ].

ʿUMAR B. **AYYŪB** [see AL-MUẒAFFAR, AL-MALIK].

ʿUMAR B. **ḤAFṢ** [see MUHALLABIDS. iv].

ʿUMAR B. **ḤAFṢŪN**, leader of a famous long-running rebellion in the province of Reíyo (Málaga) in Muslim Spain who, in 267/880, rebelled against the Umayyad *amīrs* of Cordova, and two years before his death in 305/918, eventually surrendered conditionally to the *amīr*, later caliph, ʿAbd al-Raḥmān III al-Nāṣir.

Towards the end of the 3rd/9th century, mainly as a result of the weakness of the Umayyad amirate, al-Andalus experienced several uprisings, mostly by neo-Muslims (*muwalladūn*). The rebellion of the *muwallad* ʿUmar b. Ḥafṣūn was the most dangerous due to the fact that it dragged on for almost half a century, gradually assuming a national character, and that Ibn Ḥafṣūn was mainly supported by local Christians (*ʿadjam*) and *muwallads* and was frequently in collusion with the adversaries of the amīrate both within Spain and beyond.

According to Ibn Ḥayyān [*q.v.*], our main source on the rebellion, Ibn Ḥafṣūn's full name was ʿUmar b. Ḥafṣ (Spanish augmentative Ḥafṣūn) b. ʿUmar b. Djaʿfar al-Islāmī. ʿUmar's great grandfather, Djaʿfar, had converted from Christianity to Islam, hence the epithet *islāmī* attached to his name. Alfonso, Djaʿfar's great-grandfather, is described as a Visigothic count (*ḳūmis*).

ʿUmar's father owned a farm in the district of

Ronda but, after his bad-tempered son had caused the death of a neighbour's son, he moved with his family and settled in the Serranía de Ronda not far from Bobastro [see BARBASHTURU]. Following another misdemeanour, ʿUmar fled to Tāhart, capital of the Rustamids [*q.v.*], in North Africa where he was apprenticed to an Andalusian tailor for a few weeks before deciding to return home. Ibn al-Ḳūṭiyya's remark that ʿUmar's departure was prompted by his fear of being detained by the Rustamid ruler of Tāhart "whose allegiance was to the Umayyads" is a credible explanation for ʿUmar's sudden decision to return to al-Andalus, since close political and economic relations existed between the Umayyads of Cordova and the Rustamids throughout the 3rd/9th century.

On returning home, ʿUmar joined an uncle who enlisted some forty men with whose help ʿUmar established himself in Bobastro, an old castle halfway between Antequera and Ronda, standing on a high and precipitous rock overlooking the ravine of the Guadalhorce, the site of which was identified by Simonet as Las Mesas de Villaverde, some 7 km/4 miles to the east of Ardales and some 8 km/5 miles to the north of modern Carratraca. It was from Bobastro that ʿUmar b. Ḥafṣūn launched his rebellion in 267/880 against the *amīr* of Cordova, Muḥammad b. ʿAbd al-Raḥmān (*r.* 238-73/852-86). Having been persuaded to surrender three years later, Ibn Ḥafṣūn joined the *amīr*'s army and is said to have participated in an expedition in the Upper March against Alfonso III of Asturias and the *muwallad* rebel Muḥammad b. Ḳasī. Finding himself mistreated by the city prefect upon his return to Cordova, Ibn Ḥafṣūn defected a year later, reoccupied Bobastro and soon dominated the whole area between Algeciras and Murcia.

In an appeal to the people in the province of Reiyo—then mostly Christians and neo-Muslims—Ibn Ḥafṣūn is quoted as having said, "Already for too long you have endured the yoke of the sultan who robs you and overburdens you with taxes, while the Arabs humiliate you and treat you as slaves. My sole ambition is to avenge your wrongs and deliver you from your bondage." (*Bayān*, ii, 114). Ibn Ḥafṣūn's followers are said to have constituted the lowest stratum of society and, to secure their support, he promised them—in the manner of Robin Hood—land and spoils. The chroniclers, however, list a number of virtues which endeared Ibn Ḥafṣūn to his followers, such as humility, fair dealing, honouring the brave, readiness to forgive and protection of women.

In the second year of his reign, the *amīr* al-Mundhir (*r.* 273-5/886-8) overcame Ibn Ḥafṣūn, who sued for peace but soon reneged, whereupon the *amīr* laid siege to Bobastro during which, six weeks later, he died, probably poisoned at the instigation of his brother ʿAbd Allāh who succeeded him.

The latter's authority, however, barely extended beyond his capital, as Ibn Ḥafṣūn had occupied several fortresses and townships along the Guadalquivir, including Poley—known later as Aguilar—whence he launched ceaseless forays into the Campiña of Cordova. Meanwhile, on account of a personal grudge against the *amīr*, Servando (*Sharband*), whose father and namesake was the *comes* of the Mozarabs in Cordova, sought refuge with Ibn Ḥafṣūn, who entrusted him with launching incursions in the vicinity of the capital, in the course of which Servando was killed. Servando's defection, however, does not seem to have found any response amongst the Mozarabs of Cordova.

Ibn Ḥafṣūn reached the zenith of his power in 278/891 when he installed himself in Poley, and it was then that he began to exchange correspondence and gifts with Ibrāhīm b. Aḥmad, the Aghlabid *amīr* of Ifrīḳiya. Ibn Ḥafṣūn aspired to replace the Umayyad *amīr* and proclaim his allegiance to the ʿAbbāsid caliph in Baghdād, thereby assuming in al-Andalus a role akin to that of the Aghlabid *amīr*s, i.e. real independence with nominal allegiance to the ʿAbbāsids.

The decision of the *amīr* ʿAbd Allāh to lead his troops in person against Ibn Ḥafṣūn was a brave one that was to determine the very survival of the Umayyad dynasty in al-Andalus. Though twice the size of the *amīr*'s army, Ibn Ḥafṣūn's forces were routed in the encounter at Poley (1 Rabīʿ I 278/13 July 891). The *amīr* proceeded to lay siege to Bobastro, where Ibn Ḥafṣūn had taken refuge. Within only one year from the battle, however, Ibn Ḥafṣūn regained full control of the provinces of Reiyo, Elvira and Jaén.

In 285/898, Ibn Ḥafṣūn negotiated an alliance with the *muwallad* rebel in the Upper March, Muḥammad b. Lope b. Ḳasī, but it came to nothing as Ibn Ḳasī fell in an engagement with the Tudjībid governor of Saragossa (Ramaḍān 285/October 898).

Ibn Ḥafṣūn is said to have forsworn Islam openly in 286/899 and to have converted, together with all members of his family, to Christianity, the religion of his ancestors. As a result, most of his *muwallad* supporters deserted him and the jurists (*fuḳahāʾ*) proclaimed a *djihād* against him. Henceforth, Ibn Ḥafṣūn is invariably referred to by Andalusian chroniclers as the infidel (*kāfir*), apostate (*murtadd*), atheist (*mulḥid*) and polytheist (*mushrik*).

The charge of apostasy, however, was not levelled against Ibn Ḥafṣūn until after the fall of Bobastro some thirty years later. According to Ibn al-Khaṭīb (*Aʿmāl*, 32), Ibn Ḥafṣūn is said to have "relied completely on Christians and to have, allegedly, assumed the faith of his ancestors."

Although Ibn Ḥafṣūn may have secretly converted to Christianity, it is most unlikely that he publicly renounced Islam, for how can that be reconciled with his simultaneous proclamation of allegiance to the Idrīsids in northern Morocco, his alliance with Ibrāhīm b. Ḥadjdjādj, the Arab lord of Seville, and his proclamation of allegiance, a few years later, to ʿUbayd Allāh, the new Shīʿī caliph in Ifrīḳiya? Moreover, had Ibn Ḥafṣūn really apostasised, the Umayyads would no doubt have immediately exploited such an event in order to rally Muslim public opinion throughout al-Andalus against him.

In the last decade of ʿAbd Allāh's reign (r. 275-300/888-912), Ibn Ḥafṣūn lost the initiative. The *amīr* recaptured Jaén, Archidona (Belda) and Baza, while his troops ravaged the district of Bobastro.

On succeeding to his grandfather, the young *amīr* ʿAbd al-Raḥmān b. Muḥammad (*r.* 300-50/912-61) was confronted with several rebels, chief of whom was ʿUmar b. Ḥafṣūn, "head of dissension (*fitna*) and of fanatical solidarity (*ʿaṣabiyya*) with the Christians and *muwallads*" (*Ḥulla*, ii, 159).

The policy adopted by the new *amīr*, combining flexible diplomacy (*mudārāt*) with firmness, proved fruitful. In the first year of his reign, he recovered Ecíja and defeated Ibn Ḥafṣūn near Elvira. In the following year, Seville was recovered from Ibn Ḥadjdjādj, thereby depriving Ibn Ḥafṣūn of an important Arab ally. On entering Algeciras (301/914), the *amīr*'s commander set fire to several vessels used by Ibn Ḥafṣūn for traffic with Morocco. On the *amīr*'s orders, the navy was to patrol the coast from Algeciras to Murcia so as to stop provisions reaching the rebel from North

Africa, and as a precautionary measure against the Shīʿī threat.

Eventually, Ibn Ḥafṣūn sought peace (303/916) from the *amīr*, who entrusted the task of negotiating peace terms to his Christian physician and *wazīr*, Yaḥyā b. Isḥāḳ, and to his *ḥādjib*, Badr b. Aḥmad. It would seem that Ibn Ḥafṣūn was pressed to take this step by his Christian supporters, led by Djaʿfar b. Maḳsim (Maximo), bishop of Bobastro.

The terms agreed upon seem to have been quite favourable to Ibn Ḥafṣūn, for he and his descendants after him were to retain Bobastro as well as 162 other fortresses (*Muḳtabas*, v, 115).

Unvanquished, ʿUmar b. Ḥafṣūn died in Bobastro on 16 Shaʿbān 305/1 February 918, after a rebellious career which spanned almost forty years. He was survived by four sons, three of whom—Djaʿfar, Sulaymān and Ḥafṣ—successively ruled Bobastro and intermittently rebelled against the *amīr* of Cordova. Eventually, Ḥafṣ surrendered and joined the *amīr*'s expedition in Galicia. Bobastro finally fell on 23 Dhu 'l-Ḳaʿda 315/ 19 January 928. Two months later, ʿAbd al-Raḥmān entered Bobastro; ʿUmar's body was disinterred and it was found that he had been buried according to Christian rites, a point which was taken as clear evidence of his apostasy. His body was removed to Cordova and crucified between the bodies of two of his sons.

The great mosque built by Ibn Ḥafṣūn at the outset of his rebellion was demolished, as it had allegedly been built with the proceeds of Muslim spoils. New mosques were now built in Bobastro while existing churches were demolished. Fortresses throughout the province of Reiyo were likewise destroyed and their Christian occupants deported to the lowlands which they had occupied prior to Ibn Ḥafṣūn's rebellion.

ʿUmar b. Ḥafṣūn appears to have been an adventurer, an opportunist and man of ambition who aspired to achieve independence. His real aim throughout was to achieve for himself in al-Andalus what had been achieved by the Aghlabid *amīr*s of Ḳayrawān, i.e. *de facto* independence with nominal allegiance to a remote caliphate. Initially, circumstances were favourable to him, but after his defeat at Poley (278/891), his power steadily declined.

Al-Nāṣir's conciliatory but firm policy, the blockade of the Straits, the incessant attacks on Bobastro and its district, the recurrent famines and epidemics, the divisions within the ranks of his followers and the exhaustion of the people by the long-running struggle—all these factors combined led to the eventual failure of the rebellion. Yet, under the peace agreement concluded with al-Nāṣir, ʿUmar b. Ḥafṣūn retained Bobastro and quite a large number of fortresses for himself and his descendants. He was not beaten in battle nor was Bobastro captured by force. Al-Nāṣir probably saw fit to conciliate ʿUmar b. Ḥafṣūn by keeping him in control of Bobastro as his vassal so that he could free himself to deal with the other rebels and to concentrate on the new Shīʿī power which posed a far greater threat both to the Maghrib and al-Andalus.

(Amin Tibi)

ʿUMAR b. HUBAYRA [see ibn hubayra].

ʿUMAR b. IBRĀHĪM al-KHAYYĀMĪ [see ʿumar khayyām].

ʿUMAR b. SAʿĪD al-FŪTĪ (*ca*. 1796-1864) a distinguished scholar and *mudjāhid* of the Tidjāniyya *ṭarīḳa* [*q.v.*] in the western Sudan. ʿUmar was born in Halwar in Futa Toro (present-day Senegal) to a modest scholarly family of the Fulbe [*q.v.*] ethnic group. He was initiated into the Tidjāniyya in Mauritania by ʿAbd al-Karīm al-Nāḳil. A turning point in ʿUmar's life was his pilgrimage to Mecca, on which he set out, according to traditions cited by Ly-Tall (*Un Islam militant*, 83), in 1825. While in the Ḥidjāz (1828-30) ʿUmar was attached to Muḥammad al-Ghālī, the Tidjānī *khalīfa* for al-Ḥidjāz. In his book *Rimāḥ ḥizb al-raḥīm* (i, 194-5) ʿUmar relates that besides instructing him in the special teachings of the Tidjāniyya, Muḥammad al-Ghālī appointed him *khalīfa* of the Tidjāniyya for the western Sudan. On the way back from Mecca, ʿUmar spent about six years (1832-8) in Sokoto [*q.v.*], during which he had very close contacts with sultan Muḥammad Bello, whose daughter he married.

ʿUmar b. Saʿīd's career as a *mudjāhid* was related to the self-esteem which he developed as a result of his relations with Muḥammad al-Ghālī and Muḥammad Bello and to his acquaintance with the *djihād* tradition of Sokoto, but it did not result directly from these. For after leaving Sokoto and spending some time in Masina, ʿUmar settled down to the life of a religious teacher in a community of his own which

he created in 1840 in Jegunko in Futa Djallon [*q.v.*]. There he completed in 1845 his most important work, *Rimāḥ ḥizb al-raḥīm*. The project of launching a *djihād* seems to have taken shape in 'Umar's mind during a voyage which he made through Senegambia in 1846-7, during which he won followers and spent some time in his home town of Halwar. In 1849 he moved his community to Dingiray to the east of Jegunko in the territory of the Maninka kingdom of Tamba. Robinson suggests that through moving his community to a territory ruled by a non-Muslim king, 'Umar intended to create propitious conditions for starting his *djihād*. Indeed, after settling in Dingiray, he had it fortified and had his followers armed with weapons which he bought from British traders in Freetown and French traders along the Senegal river respectively. The 'Umarian community achieved its first military success against the forces sent in September 1852 by Yimba, the king of Tamba, to capture Dingiray (Robinson, *The holy war of Umar Tal*, 112-31).

The wars of 'Umar b. Sa'īd cannot be described in any detail here. Suffice it to say that from June 1854 he started his expansion northwards into Senegambia. Two defeats which he suffered in 1857 at Medine and in 1859 at Gemu at the hands of the French made him change the direction of his conquests towards the Middle Niger. After conquering the pagan kingdom of Segu [*q.v.*] in March 1861, 'Umar became involved in a conflict with Aḥmad b. Aḥmad, the Muslim ruler of Masina, and his ally the chief of the Ḳādiriyya [*q.v.*] Aḥmad al-Bakkā'ī al-Kuntī in Timbuktu. In this way 'Umar's *djihād* developed into a conflict with the Ḳādiriyya over hegemony in the Middle Niger region, in the course of which Aḥmad al-Bakkā'ī conducted a religious campaign against 'Umar, denouncing especially his launching of *djihād* against fellow Muslims (cf. Abun-Nasr, *The Tijaniyya*, 168-71). In May 1862 'Umar b. Sa'īd defeated and killed Aḥmad b. Aḥmad, but shortly afterwards he was besieged in the latter's capital Hamadullahi by the rebellious people of Masina supported by Aḥmad al-Bakkā'ī. 'Umar fled with a small party of followers from Hamdullahi on 6 February 1864, but was killed a few days later by his pursuers. Segu remained under the rule of 'Umar's son Aḥmad until the French forces under Archinard arrived there in 1893.

Through his writings (cf. Willis, *The writings of al-Hajj 'Umar*), but more importantly through making strict adherence to Islamic norms the basis of religious solidarity amongst his followers and justifying the launching of *djihād* against Muslim rulers through their deviation from these norms, 'Umar b. Sa'īd became an important reformer of Islamic religious life in the western Sudan. The Tidjāniyya had had followers in the western Sudan before him, but it was his great prestige as religious scholar and holy warrior which laid the foundations for its becoming the only *ṭarīḳa* which could rival the much older Ḳādiriyya for the allegiance of the Muslims in this region.

(JAMIL M. ABUN-NASR)

'UMAR B. SHABBA b. 'Abīda b. Rayṭa (Rā'iṭa) al-Numayrī al-Baṣrī, Abū Zayd, expert in *akhbār* on history as well as poets and poetry, very important source for some of the most prominent works of Arabic literature and himself author of *akhbār* collections which mostly survive in the quotations of later authors (173-262/789-878). His father's name was Zayd, "Shabba" being a nickname taken from a song that his father's mother used to sing for him when he was a boy. 'Umar was born at Baṣra as a *mawlā* of the Banū Numayr, as mentioned by Yāḳūt (*Irshād*, vi, 481-2) and al-Ṣafadī (*Wāfī*, xxii, 488-9). He must have received a thorough education before he went to Baghdād, where he lectured as a *muḥaddith* (al-Khaṭīb al-Baghdādī, *Ta'rīkh Baghdād*, xi, 208-10). Ibn Abī Ḥātim al-Rāzī (b. 240/854) emphasises his reputation as a reliable and serious scholar. He also reports that he himself, together with his father, used to write down, or copy, materials at 'Umar's lectures (*katabtu 'anhu*; see *al-Djarḥ wa 'l-ta'dīl*, Ḥaydarābād, iii, 116). 'Umar also taught the *ḳirā'āt* (Ibn al-Djazarī, *Ghāyat al-nihāya fī ṭabaḳāt al-ḳurrā'*, no. 2407), and as an *adīb*, he produced some poetry. Verses in honour of al-Ḥasan b. Makhlad (d. *ca.* 271/884-3), who served al-Mutawakkil and later became vizier under al-Mu'tamid, are preserved in biographical literature. His interest in literary matters is abundantly documented in later sources, and he is said to have copied the *dīwān* of al-'Abbās b. al-Aḥnaf (Sezgin, ii, 513-14).

Al-Khaṭīb mentions that 'Umar settled at Sāmarrā' near the end of his life. However, this must have been some twenty-five years before his death in Djumādā II 262/March 878, because, as he reports himself to Abū 'Alī al-'Anazī (i.e. the *adīb* al-Ḥasan b. 'Ulayl, d. 290/902), 'Umar was soon after his coming to Sāmarrā' submitted to the *miḥna* [*q.v.*], which was in fact ended by al-Mutawakkil as early as between 234/848-9 and 237/851-2. Al-'Anazī, who was a student of 'Umar b. Shabba at Sāmarrā', also reports that he did not bow to pressure, and as a punishment (some of) his books were torn to pieces. In protest against this ill-treatment, he abstained from lecturing for a certain period. Not all of his books were lost, however. Ibn al-Nadīm (*al-Fihrist*, ed. Tadjaddud, 125-6) says that when he died, his son Abū Ṭāhir Aḥmad, who was an able poet (al-Ṣafadī, vii, 261-2), sold his father's books.

Most important is 'Umar's role as an authority for *akhbār* on history and literary matters. He was a prolific author, as we learn from the titles of his books given in the *Fihrist* (*loc. cit.*) and in the lists of Yāḳūt, al-Dhahabī (*Siyar a'lām al-nubalā'*, xiii, 371-2) and al-Ṣafadī. The subject matter indicated by these titles concerns history, particularly focused on urban centres (Baṣra, al-Kūfa, Medina, Mecca), narrative material about poets and their poetry, and the *'arabiyya*. The abundant quotations from 'Umar in such works as the *Ta'rīkh* of al-Ṭabarī and, to a lesser degree, the *Ansāb al-ashrāf* of al-Balādhurī, Abu 'l-Faradj al-Iṣfahānī's *al-Aghānī* and *Maḳātil al-Ṭālibiyyīn*, and *al-*

Muwashshah of al-Marzubānī, contain material in conformity with these titles, and it is likely that they are taken from collections which ʿUmar b. Shabba produced and used in his teaching. However, only the *Akhbār al-Madīna*, which al-Dhahabī himself had seen in part, has survived in a late and damaged manuscript (*Taʾrīkh al-Madīna al-munawwara*, ed. Fahīm Muḥammad Shaltūt, 4 vols. Beirut 1410/1990). It contains *akhbār*, quoted with full *isnāds* and without any comments, about the life of the Prophet, of ʿUmar b. al-Khaṭṭāb and of ʿUthmān b. ʿAffān. The murder of the third caliph is not included; the title *Maktal ʿUthmān* mentioned in the *Fihrist* could be a continuation of this book. Al-Ṭabarī and al-Balādhurī, who both extensively quote ʿUmar for other topics, do not seem to have used this particular collection. It comes as a surprise that only one of the titles given by Ibn al-Nadīm and in the above-mentioned lists is found quoted by a later author: al-Ṭabarī (ii, 168) refers to the *Akhbār ahl al-Baṣra*. Yāḳūt also refers to this book in general terms, but does not quote from it (F.J. Heer, 32), and al-Sakhāwī knew of this book as well (Rosenthal, 462).

The huge amount of quotations from ʿUmar in the *Aghānī* proves Abu ʾl-Faradj's substantial dependence on these materials. He does not mention any title of a book by ʿUmar, but received the material from different informants who had probably produced recensions of ʿUmar's collections, *Ṭabaḳāt al-shuʿarāʾ* and the *Aghānī*. In a similar manner, materials pertaining to the *kitāb Muḥammad wa-Ibrāhīm ibnay ʿAbd Allāh b. Ḥasan* are preserved in the quotations of Abu ʾl-Faradj's *Maḳātil al-Ṭālibiyyīn* (S. Günther) and al-Ṭabarī's *Taʾrīkh* (T. Nagel). Al-Ṭabarī's work also contains fragments, or materials, from ʿUmar's *Umarāʾ al-Kūfa* as well as from his *Kitāb al-Kuttāb*, which seems also to have been used by al-Djahshiyārī for his *Kitāb al-Wuzarāʾ* (S. Leder).

The fact that ʿUmar's works are not directly quoted is in part due to the rules of *isnād* quotation. We may also infer that ʿUmar, who applied the methods of the transmission of *ḥadīth*, passed on to his disciples *akhbār* which he had gathered and arranged according to different topics throughout his entire life. He thus spread his materials in various collections by way of *riwāya* [*q.v.*], instead of bringing books into circulation which were "his" works in terms of elaborated structure, introduction, etc. The existence of a variety of collections comprising roughly the same materials must also be considered in order to explain parallels between al-Ṭabarī and al-Balādhurī, as well as Ibn Ḳutayba and Abu ʾl-Faradj. These have as their common source neither ʿUmar's books nor the authorities he quotes, but arise from collections which are described as accessible to experts in these matters but which are not specified.

ʿUMAR BĀ MAKHRAMA [see MAKHRAMA. 3].

ʿUMAR KHAYYĀM, renowned Persian scholar and poet of the Saldjūḳ period (*ca.* 439-517/1048-1123).

1. Biography

Al-Imām Abū Ḥafṣ ʿUmar b. Ibrāhīm al-Khayyāmī is thus named in the *Mīzān al-ḥikma* which ʿAbd al-Raḥmān al-Khāzinī composed in 515/1121, often mentioning Khayyām for his scientific works. Abū Ḥafṣ is a *kunya* customarily associated with the name ʿUmar, and al-Khayyāmī is the form which would be expected in an Arabic work; it would be pointless to speculate on the origin of this name, as to whether, for example, this was a man belonging to a family of tent-makers or not, just as someone with the surname al-ʿAṭṭār is not necessarily associated with the manufacture of perfume. In Persian, this name naturally becomes Khayyām. Al-Khāzinī (see Dihkhudā, *Lughat-nāma, s.v.*) definitely had personal links with Khayyām. In the indices of catalogues, his name will be found, according to the case, in entries beginning with ʿU, ʿO, Kh, X or H.

Thanks to two other contemporaries of Khayyām, Niẓāmī-i ʿArūḍī-i Samarḳandī (*Madjmaʿ al-Nawādir* or *Čahār maḳāla*, written *ca.* 551/1156, ed. Ḳazwīnī, 100-4) and ʿAlī b. Zayd al-Bayhaḳī (*Tatimmat Ṣiwān al-ḥikma*, written after 548/1153, ed. Shafīʿ, fasc. i, 112-4, 163), some dates and biographical elements are available regarding this scholar and the renown which he enjoyed in his time. ʿAlī Bayhaḳī, called Ibn Funduḳ (who is also the author of the important history of eminent families of Bayhaḳ), gives him the title of *al-Dustūr al-Faylasūf Ḥudjdjat al-Ḥaḳḳ*. The dates are as follows: in 506/1112 Niẓāmī, who was then in the service of Khʷādja Imām ʿUmar Khayyāmī, heard his master predicting his death in circumstances which subsequently came about. According to Niẓāmī again, at Marw, in 508/1114, the reputation of Khayyām exceeded that of all the astrologers and astronomers at the court of the sultan. In 530/1135, Niẓāmī had occasion to visit the tomb of his former master, a clearly described and moving experience. According to one manuscript "it was four years" (longer according to another) since the death of Khayyām. The three appreciative accounts of Khayyām given by Niẓāmī, in his chapter on astronomers/astrologers, are inspired by the admiration which he felt for his one-time master. For his part, ʿAlī Bayhaḳī (499-565/1105-69), appreciably younger than Khayyām, presents a first biography of the scholar. He remembers having accompanied his father in 507/1113 to a salon (*madjlis*) conducted by Khayyām, who questioned him (or more likely, his father, see M. Ḳazwīnī, introd. to *Tārīkh-i Bayhaḳī*, 19-22, regarding a quotation from Abarkūhī on this point) on a *bayt* relating to an astronomical topic. "This was a man expert in philosophy (*ḥikmat*), in mathematics in all its forms, and in medicine." He was a native of Nīshāpūr, he writes, like his father and his grandfather. Skilled in teaching and in the composition of works, he was of strict character and valued his knowledge highly. Through the intermediary of a disciple of Ibn Sīnā, he was influenced by the latter's doctrine, as will be shown below. He was a scholar who was frequently consulted. Among the examples given by ʿAlī Bayhaḳī, one is the response which he gave to a question put to him by the great

master of Muslim scholasticism al-Ghazālī. He often made his way to Iṣfahān to visit the observatory constructed there by Malik Shāh after 467/1076 (see further on this, below). Finally, Bayhaḳī gives a detailed horoscope of the birth of Khayyām, on the basis of which Swāmī Govinda Tīrtha (1941) calculated that Khayyām must have been born on 18 Dhu 'l-Ḳaʿda 439/18 May 1048. Similarly, on the later basis of information given in the *Ṭarab-khāna* of Yār Aḥmad (written in 867/1460), it has been reckoned possible to date his death at 12 Muḥarram 526/14 December 1131) (on this point see the doubts of M. Muʿīn, 1333/1954). The date of 439 is entirely plausible; that of 526 is dubious. General opinion places the death of Khayyām around 517/1123. It seems that after the death of Malik Shāh, he lived some distance away from the court.

To these items of information others may be added, such as the known date of two of his treatises (469/1077 and 472/1080), or indeed the mention of Khayyām made by the renowned Maḥmūd al-Zamakhsharī (467-538/1074-1143) in his treatise *al-Ẓādjir li 'l-ṣighār*, where he comments that Khayyām enjoyed frequenting his circle, that he was familiar with the thought of the Arab poet Abu 'l-ʿAlā' al-Maʿarrī (a pertinent literary observation) and, finally, that he was of obstinate character (*lidjādja*). More important in the life of Khayyām was the date 467/1074. Dealing with the events of this year, the historian Ibn al-Athīr, in his *Kāmil* (written before 631/1233), was the first to speak of the congress of scholars organised by Malik Shāh from 465/1072 onwards for the purpose of reforming the calendar [see DJALĀLĪ], setting the date for the festival of Nawrūz [*q.v.*] and planning the construction of an astronomical observatory at Iṣfahān. The object was both scientific and economic (fixing the date for the levying of taxes). "Among them," says Ibn al-Athīr, "there were ʿUmar b. Ibrāhīm al-Khayyāmī, Abu 'l-Muẓaffar al-Iṣfizārī, Maymūn b. al-Nadjīb al-Wāsiṭī and others." Thus the meeting was probably not attended by Niẓām al-Mulk or Ḥasan al-Ṣabbāḥ, despite the legend to this effect retailed by e.g. Ḥamd Allāh Mustawfī in his *Tārīkh-i Guzīda*. Also worth mentioning is a letter written to Khayyām by the Persian poet and mystic Ḥasan (or Madjdūd) Sanā'ī-i Ghaznawī (d. 525/1131 [see SANĀ'Ī]), a character of no lesser eminence than he himself, who had suffered bad experiences during a visit to Nīshāpūr, in particular when he was accused of having induced his servant to rob a money-changer. He complained to Khayyām, as a personage of influence in the town capable of defending his interests (the letter, written in elegant Persian, was published by Mudjtabā Mīnuwī, reproduced in ʿAbbāsī, 1338/1959, 223-8). In brief, the biography which may be composed on the basis of information from contemporaries or from those who lived shortly after Khayyām is that of an important scholar, of as yet unsuspected poetical talents. Later biographers were to exploit these early elements, reproducing them and sometimes amplifying them imaginatively, as did, in the early 7th/13th century, al-Shahrazūrī in his first article on Khayyām, and al-Ḳifṭī in his *T. al-Ḥukamā'*.

2. The Quatrains

The recent celebrity of the quatrains attributed to Khayyām is inversely proportional to the authenticity of many of them. Care is required, however, when tackling the puzzle posed by the hypothetical reconstruction of the poetical corpus of Khayyām not to obscure a major literary fact, that of the Khayyāmian tradition. In fact, the study of authenticity runs the risk of scuttling a rich tradition which has worked for several centuries according to the procedure and the mentality of an initial literary nucleus which can scarcely be other than the creation of a single individual, who certainly seems to be ʿUmar Khayyām, as may be deduced from a number of indications. While it was easy to preserve the scholar's scientific production, the retention of poems of a more personal nature, nudging at the frontiers of orthodoxy, could only be done with caution. There exists no text of reference offering the essential poetical works of Khayyām. There exist sparse quotations, painstakingly collected by anthologists, forming a small corpus which is very coherent in form and in content. Beyond this, there was an abundance of quatrains of the same type, regarded as worthy, for a limited period of time, of the tradition thus constituted, and demanding to be understood. Subsequently, the situation deteriorated; inferior imitations were produced, quatrains of other poets, dependent on other inspirations, were blended into the corpus, and the final stage saw the clever fabrication of "ancient" manuscripts.

Quatrain is the term used, inaccurately, to denote the Persian *rubāʿī* [*q.v.*]. It consists, as is well known, of two distiches (*bayt*), composed in turn of two hemistiches (*miṣrāʿ*). The four hemistiches have the same basic metre, specific to the quatrain (reading from right to left): - - \- -\ o - o\ - o o\ - -. This quantitative metre has five feet. It is obligatory that feet no. 1 and no. 4 are strictly invariable. In the entirety of the Khayyāmian tradition, foot no. 2 consists of two shorts and one long; exceptions (two longs alone) are rare. Foot no. 3, in the same tradition, alternates freely, within the same quatrain, between short-long-short and long-short-short; it is unusual to find two longs in this position. In the same tradition and within the same quatrain, foot no. 5 can be formed of two longs or of two shorts and one long. No rule exists to impose order on variation; for example, the third *miṣrāʿ* is not necessarily required to be distinguished from the three other *miṣrāʿ* by a specific variation of the metre. As for the rhyme, S.ʿA. Mir Afḍalī (1374/1995) has shown statistically that before the 7th/13th century, this third *miṣrāʿ* is not yet necessarily at variance with the rhyme of the *rubāʿī*. Of the 1,358 Persian quatrains known between the 5th/11th century and the 6th/12th century, 1,347 have the rhyme *a-a-a-a*, and only eleven have *a-a-b-a*. It is to this tradition that quatrains of the time of Khayyām belong, and here there is an additional means of pursuing the quest for authenticity. The rhyme in *a-a-b-a* is thus not absent, but it is not common, as will be seen. The rhyme scheme *a-a-b-a* was subsequently to become the rule, however, either as a result of the work of new poets, or on account of new arrangements of ancient quatrains by copyists.

The history of the quatrains of ʿUmar Khayyām has been marked by a particular event, this being a free translation of these poems into English which enjoyed unparallelled success. Khayyām was not unknown in Europe; his name was mentioned in Basel in 1583. In 1816, H.G. Keene produced the first English translation of the quatrains, revived in German by Von Hammer Purgstall a few years later. But E.B. Cowell, who taught Persian to Edward Fitzgerald (1809-83) and was Professor of Sanskrit at Cambridge, discovered in 1856 in the Bodleian Library at Oxford a manuscript from the Ouseley collection (no. 140), dating from the 9th/15th century and containing 158 quatrains explicitly attributed to Khayyām. From 1859 onwards, Fitzgerald began to publish his translation,

on the basis of this manuscript and with the aid of a more recent Indian copy containing 510 quatrains. Fitzgerald's fifth version appeared in 1889. Only the first bore the rubric *translated*, without the name of the translator; the others were to be signed and described as *rendered*—a more accurate term in that this was a poetical rendering into English of what Fitzgerald understood to be the message of the quatrains. The number and the choice of quatrains varied from one version to the other. In total, the English poetical work ran to 310 editions and millions of copies. For a translation, it was a phenomenal success.

The reverberations were considerable, but it was not until 1897 and the appearance of Z. Žukovski's article on what he called "the wandering quatrains" (in *al-Muẓaffariyya. Festschrift Baron V. Rosen*) that the question was raised as to the authenticity of 82 quatrains attributed to ʿUmar K̲h̲ayyām. E. Denison Ross (1900), then E.G. Browne (synthesis in *LHP*, ii, 246-59), took up the question, the latter concluding, with others, that an adequate answer could not be found. After the edition and translation of numerous quatrains by F. Rosen in 1925, on the basis of a dubious manuscript known as the "Berlin" one, the copy of a copy containing 329 items arranged alphabetically, Arthur Christensen (*Critical studies*, 1927) re-examined the entire question. Facing the major difficulty posed by the fact of only late manuscripts of the quatrains existing, the best option was to choose the most reliable manuscripts and seek to establish connections between the texts in terms of the succession of quatrains established in each case. The absence of alphabetical arrangement among the quatrains, for example, is, as is well known, a sign of the antiquity of a text. On the other hand, a quatrain may be considered authentic if it is found in at least five texts of the best group of these manuscripts. By means of successive eliminations, Christensen arrived at a total of 121 quatrains showing characteristics of authenticity in form and content. The excellent *EI*[1] article published by V. Minorsky in 1936 s.v. *ʿOmar K̲h̲aiyām*, shows the stage which had been reached in his studies at that point. But in Persia as in Europe, research was henceforward directed towards ancient texts capable of delivering, at least in quotation, original works. Here, in chronological order, are the ancient pieces and the significant evidence. A characteristic trait showing the antiquity of a quatrain is the fact that it does not contain the name of K̲h̲ayyām. General use of the *tak̲h̲alluṣ* [*q.v.*] dates from the 7th/13th century, and not being by any means a panegyric poet, K̲h̲ayyām had no need to impress a patron with self-generated publicity. When K̲h̲ayyām's name appears in a quatrain, it is natural to suspect pseudepigraphy or the substitution by a copyist of *k̲h̲ayyām* for a word such as *ayyām*. K̲h̲ayyām is not always named by the author who cites a quatrain, and it at this point that recourse must needs be had to tradition.

First to be mentioned is the fact that, in the anthology which he composed in 572/1176 (*K̲h̲arīdat al-Kaṣr*), ʿImād al-Dīn al-Kātib al-Iṣfahānī mentions K̲h̲ayyām among the poets of K̲h̲urāsān who wrote in Arabic. The poem of four Arabic *bayts* which he quotes is certainly consistent with the thinking of the poet, in its evocation of the quest for reconciliation of self with the realities of destiny. This would be supplemented by other Arabic *bayts* of K̲h̲ayyām which al-S̲h̲ahrazūrī was subsequently to cite in the second article which he devoted to K̲h̲ayyām in his *Nuzhat al-arwāḥ*, written before 611/1214 (quotations and translations in ʿAlī Das̲h̲tī, *Damī bā K̲h̲ayyām*, 92-98).

But even before 534/1139, thus before Niẓāmī-i ʿArūḍī, and a few years after the death of K̲h̲ayyām, Aḥmad-i Samʿānī produced a remarkable Persian quatrain in his *Rūḥ al-arwāḥ* (ed. N. Māyil-i Harawī, 78, 293), which the entire tradition, from the 7th/13th century onward, has attributed to K̲h̲ayyām. A masterpiece of Persian literature, the work dealt with the divine names, and the quatrain concluded the chapter on the name of Creator (*al-bārī*); it is quoted again in the chapter dealing with divine mercy. It takes the form of an ironical perspective on those who inquire about the causes of the world without thinking of the cause of His action and dealing only with pretexts (*rubāʿī* no. 19 in Das̲h̲tī, *Damī bā K̲h̲ayyām*, with significant variants. References here will be to this work at times, but with account being taken, as the case requires, of more ancient quotations).

Farīd al-Dīn ʿAṭṭār (d. 586/1190) is the well-known author of major spiritual *mat̲h̲nawī*s in Persian; his *Ilāhī-nāma* is the one which he wrote concerning the end of his life. Like K̲h̲ayyām, he was from Nīs̲h̲āpūr. One of many anecdotes in his poem (215, 5169-83) is that of the man who could see what was happening in tombs. To test him, a dignitary led him to the tomb of ʿUmar K̲h̲ayyām. There the man saw the scholar in a state of utter confusion having to confront his ignorance, although throughout his life he had prided himself on his knowledge. Subsequently ʿAṭṭār extends the sayings of the visionary in the form of a long homily: since neither the beginning nor the end of life is clear, no one will find in this inferior world either head or tail. The sky is a ball without beginning or end, the earth is a foul valley where all men lose their way, the world is misery, the Wheel [of fate] plays with us. Such is ʿAṭṭār's version of the nucleus of the thinking promulgated by K̲h̲ayyām's quatrains—a curious version, indeed.

Ẓahīrī-i Samarḳandī wrote some ten years before 600/1203 his *Sindbād-nāma*, a fine example of Persian prose embellished with pieces of verse. Among the latter, and without the author being named, five quatrains are found which tradition attributed to K̲h̲ayyām at a very early stage. These *rubāʿī*s (Das̲h̲tī, nos. 29, 16, 12, 22, 18), of ancient composition, add to the theme of the precariousness of a world devoid of reason, that of the consequences of withdrawing from it; since no one will return to the world below to reveal the secrets of other places, it is imperative that all enjoy their share of good living, in particular the pleasures of wine and romance. Not to do so would be a mistake. The poems also evoke the theme of the earth as dust; the cup and the pitcher are made from the remains of humans who were proud. Ẓahīrī repeated *rubāʿī* no. 29 in his *Ag̲h̲rāḍ al-siyāsat* (155).

It is with Fak̲h̲r al-Dīn Rāzī [*q.v.*] that the name of K̲h̲ayyām appears as the author of a quatrain (Das̲h̲tī, no. 1, with perceptible variants). In the last part of a treatise written in 600/1203 (*al-Tanbīh ʿalā baʿḍ al-asrār*...), in a commentary on sura XCV which relates to the last things, the author quotes this audacious *rubāʿī* which he attributes to K̲h̲ayyām by name: "Disposer of the elements,/ Why did the Master of the world/ Vow the destruction of these assemblages of atoms?/ If they were fair of form/ And well-conceived, why then/ Dismantle them? And if not.../ if not, who is to blame?" (following the Fr. tr. of G. Lazard). Coming from such an authority, the quotation and the attribution to K̲h̲ayyām carry considerable weight. The *rubāʿī* poses a question poetically, but this is to be understood as a rhetorical question, the response to which is not in doubt—or possibly

as a metaphysical question to which there is no answer. It is impossible to forget the existence and the breadth of the tendency of "free thinkers in classical Islam" (see on this subject, D. Urvoy, Paris 1966), when contemplating this famous quatrain.

This same *rubāʿī* was to be taken up by another Rāzī, Nad̲j̲m al-Dīn Dāya, in the work in Persian which he completed in 620/1223 (*Mirṣād al-ʿibād*, 31), adding to it another *rubāʿī* (Das̲h̲tī, no. 2) which he also attributed to K̲h̲ayyām, as a means of further justifying his indignation as a believer confronting such manifestations of atheism. The second *rubāʿī* cited ("In the circle whither we enter and whence we depart") could have followed the passage dedicated by ʿAṭṭār to K̲h̲ayyām.

The 7th/13th century was the time when there appeared, in the pattern which has been seen to evolve, the best-formed quatrains. Without naming K̲h̲ayyām, Rāwandī, in his *Rāḥat al-ṣudūr* of 599/1202 (425), presents a Bacchic quatrain ("A mouthful of old wine is better than the new empire", absent from Das̲h̲tī). Before 622/1225, Warāwīnī, in his *Marzbān-nāma* (ed. Raws̲h̲an, 501), without naming K̲h̲ayyām, quotes the fine quatrain (absent from Das̲h̲tī) spoken by a fisherman, complaining of his old age to a fish. In 629/1231, ʿAbd al-Ḳādir Āharī, in *al-Aktāb al-kuṭbiyya* (ed. Dānis̲h̲-Paz̲h̲ūh, 121), attributes to K̲h̲ayyām two Ṣūfī quatrains, one of which is definitely the work of Sanāʾī. On the other hand, without naming K̲h̲ayyām, he quotes from two of his quatrains, one being that cited (above) by the two Rāzīs (Das̲h̲tī, no. 1), the other retained by tradition "Heaven has nothing to offer me [here below]" (absent from Das̲h̲tī).

A new development took place in the K̲h̲ayyāmian tradition with the proliferation of anthologies. That of K̲h̲alīl-i S̲h̲irwānī, the *Nuzhat al-mad̲j̲ālis* (written before 649/1251), a collection of 4,000 *rubāʿīs*, includes a *bāb* devoted to K̲h̲ayyām by name and containing 31 quatrains, presented as a choice made from those of the poet. While five are problematical, the other 26 quatrains are of the best quality (see M. Farzāna, *K̲h̲ayyām-s̲h̲ināk̲h̲t*, Tehran 1974, 153-65). There must have been other anthologies in which K̲h̲ayyām had his place. One which has survived and which dates from the following century (741/1340), was written by Muḥammad b. Badr al-D̲j̲ād̲j̲armī, *Muʾnis al-aḥrār* (ii, 1144-6). It is composed of a choice of the poems of a great many authors, among whom K̲h̲ayyām is mentioned and his work illustrated by the quotation of 13 quatrains, some of which have been mentioned above, and all of which are of superior quality. But five out of the 13 quatrains have already discarded the rhyme scheme *a-a-a-a* in favour of *a-a-b-a*.

Henceforward, K̲h̲ayyām enters the storehouse raided by other men of letters for quotations which serve their purpose. Thus ʿAṭāʾ Malik D̲j̲uwaynī, the historian of the Mongols, in his *Tārīk̲h̲-i D̲j̲ahāngus̲h̲āy* (i, 128, written before 681/1281) puts into the mouth of a spectator of the atrocious massacres committed by the Mongols at Nīs̲h̲āpūr the superb *rubāʿī* beginning *Tarkīb-i piyāla ki*... (Das̲h̲tī, no. 3), attributed to K̲h̲ayyām by name. For his part another eminent historian, Ras̲h̲īd al-Dīn Ṭabīb (d. 718/1318) in his *D̲j̲āmiʿ al-tawārīk̲h̲* (in the section devoted to the Ismāʿīlīs, ed. Dānis̲h̲-Paz̲h̲ūh, Tehran 1356/1977, 110-11) quotes an anecdote explaining the reasons for the assassination of Niẓām al-Mulk by Ḥasan Ṣabbāḥ. The whole episode is supposed to be based on the fact that these two individuals, in their childhood, were close friends of ʿUmar K̲h̲ayyām; when he was at the zenith of his power, Niẓām al-Mulk kept the promise he had made to help his friends in regard to K̲h̲ayyām only, not to Ḥasan Ṣabbāḥ. This fictitious account is the origin of the legend which was to develop of the three companions (cf. H. Bowen, *The* sargudhasht-i sayyidnā, *the "Tale of the three school-fellows"*..., in *JRAS* [1931], 771-82), and it may have been inspired by the story of the three companions of the fig-tree recounted in the 4th/10th century by al-D̲j̲ahs̲h̲iyārī (*K. al-Wuzarāʾ wa 'l-kuttāb*, ed. Cairo, 96). It is found fully developed in the work of Dawlat S̲h̲āh (*Tad̲h̲kirat al-s̲h̲uʿarāʾ*, 153). Sayfī-i Harawī wrote in 720/1320 a history of Harāt (ed. Ṣiddiḳī, 129) in which he quoted, without naming K̲h̲ayyām, a quatrain subsequently held by tradition to be attributable to bim "The misery of the world is poison (*zahr-ast*), and wine is my antidote to poison". Yet another historian, Mustawfī-i Ḳazwīnī, in his *Tārīk̲h̲-i Guzīda* (written in 730/1329), devoted a feature to K̲h̲ayyām, presented as a scholar and a poet, and quoted two of his *rubāʿīs*, one the famous "Every atom upon the earth has been a being on the face of the sun" (Das̲h̲tī, no. 4), and the other a more dubious one, supposedly composed at the time of his death by "K̲h̲ayyām who stitched the tents of wisdom...".

Also worthy of mention among the original recorders of the quatrains of K̲h̲ayyām is ʿUbayd-i Zākānī [*q.v.*], the satirical poet of the 8th/14th century. In his *Ak̲h̲lāk al-as̲h̲rāf*, ed. Iḳbāl-i Ās̲h̲tiyānī, Tehran 1953, 14, 19, without naming K̲h̲ayyām, he supplies the quatrain (Das̲h̲tī no. 16) already recorded by Ẓahīrī in his *Sindbād-nāma*, and another of dubious authenticity which tradition does not retain.

Though the links in the chain are lacking, it is not hard to envisage the process whereby, over two centuries, the collection of quatrains attributed to ʿUmar K̲h̲ayyām was considerably expanded. The celebrated Oxford manuscript used by Fitzgerald, dating from 865/1460, contains 158 *rubāʿīs*. In manuscripts also dating from the 9th/15th century, in Istanbul, in the B.N. of Paris or in private collections in Tehran and Lucknow, collections have been found ranging from 56 to 315 quatrains. Subsequently, the tally expanded still further, exceeding the figure of 500. But an interesting turn of events, which put the brakes on this expansion, came between 1947 and 1952, when three manuscripts came on the market, dating respectively from 604/1208, 613/1216 and 658/1259. Also announced in Tehran in 1959 was the existence of a manuscript dating from 654/1256. K̲h̲ayyām was named as the sole author of quatrains totalling 252 items. V. Minorsky took the bearings of this issue (*The early collections of O. Khayyam*, in *Yādnāme-yi Jan Rypka*, Prague-The Hague 1967, 107-23) on which there is little point dwelling, although Minorsky's encouraging conclusions, which include the following, may be noted: the comparative tables between these manuscripts, drawn up by A.J. Arberry, will serve as references for research, and credit is due to the imitators of K̲h̲ayyām for having preserved a living tradition based on a root which was well documented.

The English translation by A.J. Arberry of the Cambridge manuscript, erroneously dated to 604/1208, then the French translation by Pierre Pascal, with an edition of the manuscript in Rome in 1958, then the edition of the manuscript by Muḥammad ʿAbbāsī in Tehran in 1959 and by Aliev and Osmanov, with Russian translation, at Moscow in the same year, are useful works in that they present the provisional corpus of quatrains relating, with a few evident exceptions, to the K̲h̲ayyāmian tradition. The figure of 252 *rubāʿīs* is clearly disproportionate in terms of the num-

ber of *rubāʿīs* found in texts between the 6th/12th and 8th/14th centuries which could have been composed by K͟hayyām—an approximate total of 25 items, of which fewer than ten are explicitly mentioned by the sources as being the work of the poet himself, if the *Nuzhat al-mad͟jālis* of S͟hirwānī is left out of the equation.

What is needed is a revised edition of the Cambridge manuscript which takes account of the readings offered by the ancient texts. It would be necessary to eliminate the quatrains which are not part of the K͟hayyāmian tradition, such as nos. 131-2, 134, 151-8, etc. (Moscow ed.). Also required is a clearer identification of what is most central in the K͟hayyāmian tradition, not only in the text itself, but in the evident influence of this tradition on the thinking of major authors such as Ḥāfiẓ. It is seen, for example, that the invisible is that which is questioned by the man whose knowledge reveals his ignorance. This invisible is presented as inadmissible, since it is a secret kept elsewhere; it is a destiny which, in justifying itself, denounces the one whom it overwhelms. All men need a share of terrestrial good fortune, and the therapy for guilt is to enjoy this share immediately. Religious practice is then devoid of cause and effect (no. 140), profitable time is only that of the moment (no. 200, for example), and thinking of God evokes the idea that in His place the poet would have made the world otherwise (no. 228, for example). Several quatrains place the poet among those who are in neither total certainty nor total doubt, but steer a path between the two extremes.

3. Mathematics

The main contributions by K͟hayyām in science are related to mathematics and astronomy. His first extant mathematical treatise is a "Treatise on the division of a quadrant of a circle" (*Risāla fī taḳsīm rubʿ al-dāʾira*), which was devoted to the theory of algebraic equations. Algebra, as important part of mathematics, appeared in the treatise of Muḥammad b. Mūsā al-K͟h*ʷ*ārazmī under the name *al-d͟jabr wa 'l-muḳābala* [*q.v.*]. Al-K͟h*ʷ*ārazmī himself solved only linear and quadratic equations, but some classical and mediaeval mathematicians solved separate cubic equations; thus the first cubic equation $x^3 = 2a^3$ was solved in the 4th century B.C. by Menaechmus and led him to the invention of conic sections.

The single manuscript of this treatise by K͟hayyām is located in the Library of Tehran University. It was published, with a French translation by R. Rashed and A. Djebbar. In it, a geometric problem of division of a quadrant of a circle was reduced to the cubic equation $x^3 + 200x = 20x^2 + 2000$. The complete classification of cubic equations with positive roots was also given, and the equation in question was solved by intersection of an equilateral hyperbola and a circle. K͟hayyām found also the approximate numerical solution of this equation. There are also Persian, English and Russian translations.

The complete theory of cubic equations was set forth by K͟hayyām in his Arabic "Treatise on the proofs of problems of algebra and almucabala" (*Risāla fī 'l-barāhīn ʿalā masāʾil al-d͟jabr wa 'l-muḳābala*) written in Samarḳand and dedicated to the judge Abū Ṭāhir, extant in manuscripts in Paris, Cairo, London, Leiden and the Vatican, and published by F. Woepcke. There are also English, Russian, and Persian translations. This treatise contains the complete classification of linear, quadratic, and cubic equations with positive roots. This classification consists of 25 equations: one linear $ax = b$; five quadratic $ax^2 = bx$, $ax^2 = c$, $ax^2 + bx = c$, $ax^2 + c = bx$, and $ax^2 = bx + c$; five cubic equations which can be reduced to linear and quadratic: $ax^3 + bx^3$, $ax^3 = bx^2$, $ax^3 = cx$, $ax^3 + bx^2 = cx$, $ax^3 + cx = bx^2$; and 14 cubic equations which cannot be reduced to linear and quadratic: $ax^3 = d$, $ax^3 = bx^2 + cx$, $ax^3 = bx^2 + d$, $ax^3 = cx + dx$, $ax^3 + bx^2 = cx$, $ax^3 + bx^2 = d$, $ax^3 + cx = d$, $ax^3 = bx^2 + cx + d$, $ax^3 + bx^2 + cx = d$, $ax^3 + bx^2 + d = cx$, $ax^3 + cx + d = bx^2$, $ax^3 + bx^2 = cx + d$, $ax^3 + cx = bx^2 + d$, $ax^3 + d = bx^2 = cx$. In all these equations, all coefficients, a, b, c, d are positive. For quadratic equations, K͟hayyām gives solutions according to the treatises of al-K͟h*ʷ*ārazmī and T͟hābit b. Ḳurra; for cubic equations which are not reduced to linear and quadratic ones he gives solutions by means of conic sections: parabolas with diameters parallel to axes 0x or 0y, circles, and equilateral hyperbolas

with axes or asymptotes parallel to axes 0x and 0y. For instance, the equation $x^3 + d = bx^2$ he solves by means of the parabola $y^2 = D(b-x)$ and the equilateral hyperbola $xy = D$, where $D^3 = d$. For each equation he considers cases, when this equation has one, two, or no positive roots (for our example in these cases, the hyperbola and parabola touch at a point, intersect at two points, and do not meet, respectively). The case when a cubic equation has three positive roots, Khayyām does not notice.

Before his "Treatise on the proofs of problems of algebra and almucabala", Khayyām wrote a treatise on arithmetic. In this he mentioned that the Indians know methods for extracting square and cubic roots based on small induction and knowledge of the products of the first nine numbers, and that he had written a treatise with the proof of these Indian rules and generalised them for finding "bases of square-squares, square-cubes, cube-cubes and so on, as much and as many as you like", that is, for the extraction of roots of any integer power. Since such methods in the works of Naṣīr al-Dīn al-Ṭūsī and Djamshīd al-Kāshī are based on the binomial formula for $(a + b)^n$, this treatise apparently contained also the exposition of the binomial formula. This treatise is not extant, but its title was apparently "Difficult problems of arithmetic" (*Mushkilāt al-ḥisāb*); this last is written on the title page of the Leiden University Library ms. containing a manuscript of Khayyām's geometric treatise. Therefore in V. Minorsky's *EI*[1] art. *ʿOmar Khaiyām* it was written erroneously that a manuscript of this treatise is extant and located at Leiden.

Khayyām's geometric treatise is his "Commentary on difficulties in introductions to the Book of Euclid" (*Sharḥ mā ashkala min muṣādarāt kitāb Uklīdis*), finished at Iṣfahān in 469/1077, with manuscripts located in Paris, Leiden and in the Ḥaydarābād Sālār Djang Library; the Arabic text was published by T. Erani in Tehran and by A.I. Sabra in Alexandria. There are also Russian and incomplete English translations of this treatise. The treatise is devoted to commenting on Euclid's *Elements* and consists of three chapters: (1) on parallel lines, (2) on the definition of ratio and (3) on compound ratios, these three problems being indeed the most difficult ones in the *Elements*.

The first relates to Euclid's postulates. In his introduction to the first book of his *Elements*, Euclid formulates five postulates, that is, geometric axioms: (1) any two points can be joined by a straight line, (2) any straight line can be continued indefinitely, (3) there is a circle with any centre and any radius, (4) all right angles are equal and (5) if a line intersects with two lines in a plane and forms interior one-side angles less than two right angles, these lines, if they are continued, will meet. The fifth postulate is formulated in a more complicated way than the first four, and many mathematicians tried to prove it as a theorem. In the introduction to this chapter, Khayyām formulates five "principles borrowed from the Philosopher". This Philosopher is undoubtedly Aristotle, since four of these five principles are in Aristotle's works. Only the fourth principle is not found there: "Two convergent straight lines meet and it is impossible for two convergent straight lines to diverge in the direction of convergence"; evidently this "principle" was formulated by Aristotle in a work no longer extant. This principle is equivalent to postulate V of Euclid, but is more obvious. Khayyām proposes a proof of Euclid's postulate V based on it. Note that many proofs of postulate V were based on the logical error of *petitio principii*, that is, it implicitly contains an assertion equivalent to the postulate to be proved. Khayyām was one of the first mathematicians whose proof did not contain this error and who explicitly replaced postulate V by an equivalent assertion. In his proof, Khayyām first considered a quadrilateral with equal sides, with two right angles at the base and two equal angles at the upper side, and three hypotheses on these upper angles, i.e. the hypotheses of acute, obtuse, and right angles, and he refutes the first two hypotheses by means of the fourth "principle of the Philosopher". From the existence of the rectangle he easily proves the postulate V. Note that the hypotheses of acute and obtuse angles are fulfilled in hyperbolic and elliptic non-Euclidean geometries respectively, and in his proof Khayyām actually proves the first theorems of these non-Euclidean geometries. The Khayyām quadrangle was later used by Naṣīr al-Dīn al-Ṭūsī, J. Wallis and G. Saccheri, and is therefore known also as the "Saccheri quadrangle".

The second of these problems is the problem of definition of the equality of two ratios of continuous magnitudes. In ancient Greece, there were two solutions of this problem, those of Theaetetus and Eudoxus. The way of Theaetetus was forgotten by the time of Khayyām, and Khayyām discovered it anew and proved the equivalence of both definitions. Note that Theaetetus's definition admits the calculation of approximate rational values with any required degree of precision.

The third of these problems is the problem of the definition of "compound ratios". In Book V of his *Elements*, Euclid defined "double", "triple", and "multiple" ratios for a/c, if $a/b = b/c$, for a/d if $a/b = b/c = c/d$, etc., and in Book VI he wrote that a ratio a/b is "compound" from ratios c/d and e/f if there are magnitudes k, l, m such that $a/b = k/m$, $c/d = k/l$, and $e/f = l/m$. For the creation of a new theory of these ratios, Khayyām introduced an abstract 1 and connects with each ratio a/b of continuous magnitudes an abstract magnitude g, such that $(1/g) = (a/b)$. He calls the magnitude g "number" but "not a number absolute and true" (for him "absolute and true" numbers were only integer numbers). Thus he introduces generalised numbers which now are called "real numbers". He calls a ratio "compound" from two given ratios if the "generalised" number for the first ratio is the product of analogous numbers for the second and third ratios; undoubtedly, since he could calculate approximate rational values of ratios, he understood by "the product of two generated numbers" the number determined by a product of approximate rational values of ratios forming the compound ratio. The notion of real numbers appeared in Europe only in the works of Descartes, Wallis, Newton and Leibniz, and became the basis for the creation of differential and integral calculus.

Thus Khayyām's commentary on Euclid played a very important and creative role for the discoveries of European mathematicians such as non-Euclidean geometry and calculus.

4. Astronomy and the calendar

In 466/1074 Khayyām was invited by the Saldjūḳ sultan Malik Shāh [*q.v.*] to his capital for organising an astronomical observatory and for reforming the Persian solar calendar necessary for agricultural work. The new observations of the motion of the sun led to a more accurate measurement of the length of the solar year, and the spring equinox of 471/1079 became the first day of the new era called "Malikī" or "Djalālī" (in honour of Malik Shāh, who also had the honorific of Djalāl al-Dawla). The reform was not

carried out finally, but the alternation of leap years in this calendar was normally 4, 8, 12, 16, 20, 24, 28, 32 (this calendar diverges from the astronomical solar calendar by one day every 5,000 years, whereas this divergence is reached after only 3,333 years in the Gregorian calendar). The observatory was destroyed after Malik Shāh's death in 485/1092.

In this observatory, Khayyām compiled his "Astronomical tables for Malik Shāh" (*Zīdj Malik-Shāhī*) mentioned by Ḥādjdjī Khalīfa. Only one fragment of these tables is extant: the catalogue of 100 of the brightest stars, located in an anonymous manuscript written by the Ismāʿīlīs (now in the B.N., Paris); there is a Russian translation of this catalogue.

After the destruction of his observatory, Khayyām wrote in Persian his *Nawrūz-nāma* "Book of the New Year", devoted to the Persian solar calendar. There is a single manuscript in Berlin; the text was published in Tehran in 1933. Undoubtedly, this treatise was written to attract the attention of the successors of Malik Shāh to problems of the Persian solar calendar and to prompt them to restore the observatory.

5. Mechanics, natural sciences, music

In the period when the capital of the Saldjūḳ sultanate moved to Marw, the works of Khayyām relating to mechanics were written. There worked in Marw, at the court of Sultan Sandjar, Khayyām's pupil ʿAbd al-Raḥmān al-Khāzinī [*q.v.*], the author of the "Astronomical tables for Sandjar" and a treatise on mechanics, "The balance of wisdom". Al-Khāzinī's "Balance of wisdom" contains the texts of two of Khayyām's treatises on mechanics "The balance of wisdoms" (*Mīzān al-ḥikam*) and "On right balance" (*Fī 'l-ḳusṭās al-mustaḳīm*). Both are devoted to the theory of the level balance, and there are also separate manuscripts of the first treatise under the title "On the art of defining quantities of gold and silver in a body consisting of them" (*Fī iḥtiyāl maʿrifa miḳdāray al-dhahab wa 'l-fiḍḍa fī djism murakkab minhumā*). Khayyām solved this problem by weighing the alloy in air and in water, and he named the balance for this weighing the "balance of wisdom", whence also the title of al-Khāzinī's book. In the second treatise, a balance with a moveable weight is considered. The first of these treatises has been published in Arabic text and translated into English, German, and Russian; the second is also published in Arabic text and in Russian translation.

The treatise on music "Reasoning on kinds [formed] by quarts" (*al-Ḳawl ʿalā 'l-adjnās allatī bi 'l-arbaʿa*) is extant in two Arabic manuscripts in Manisa and in Tehran University Library; it is published in Arabic text and Russian translation. Perhaps this treatise is a fragment of the "Treatise on difficulties from the book on music" (*Sharḥ al-mushkil min kitāb al-mūsīḳā*) mentioned in the treatise of Khayyām on geometry.

The historians al-Bayhaḳī and al-Tatawī mention also natural scientific (physical or biological) and geographical treatises of Khayyām, *Mukhtaṣar fī 'l-ṭabīʿiyyāt* "Concise treatise on nature" and *Lawāzim al-amkina* "Necessary information on places". Khayyām was also a physician and treated the sons of Malik Shāh, Berkyaruḳ, Muḥammad and Sandjar.

6. Philosophy

Besides philosophical quatrains, Khayyām also wrote philosophical treatises, in which he appears as a pupil of Ibn Sīnā (Avicenna), that is, as an adherent of Eastern Aristotelianism. The first treatise "On being and obligation" (*Risālat al-kawn wa 'l-taklīf*), was written in 472/1080 at the request of the judge and *imām* of Fars, Abū Naṣr Muḥammad b. ʿAbd al-Raḥīm al-Nasawī, who was also a pupil of Ibn Sīnā. Al-Nasawī asked Khayyām to explain his opinion on God's wisdom in the creation of the world and man, and on the obligation of men to pray. This request may possibly be explained by the contents of some quatrains composed by Khayyām or ascribed to him, and the judge, as a pupil of Ibn Sīnā, wanted to free Khayyām from suspicions of heresy. Khayyām substantiates the necessity of God, like Aristotle and Ibn Sīnā, as being the final cause, the cause of all causes, because the chain of causes must have an end, that is, it cannot be infinite or circular. He names this chain of causes the "chain of order" and says that the upper links of this chain are noble (the uppermost link is God), and the lower links are not noble (the lowest link is dust). The necessity to pray Khayyām explains by the necessity always to remember God and to obey His laws.

The second treatise, "An answer to three questions: the necessity of contradiction in the world, determinism and permanence" (*Djawāb ʿan thalāth masāʾil: ḍarūra al-taḍādd fī 'l-ʿālam wa 'l-djabr wa 'l-baḳāʾ*) is connected with the first treatise. Apparently Khayyām's answer satisfied the imām, and he proposed to Khayyām three new, more difficult, questions. The first is the problem of evil in the world. Khayyām believes that even an all-powerful God cannot operate without evil and to refuse a great good owing to a small evil is itself a great evil. An analogous problem was discussed later by Leibniz in his *Theodicy*. Regarding determinism, Khayyām says only that "determinism first looks as if it were nearer to truth, but indeed declines into the absurd and is very far from the truth". The problem of permanence, that is, the stability of phenomena, is one of the most important problems of all philosophical systems; Khayyām, like all Muslim philosophers, was reduced to explaining permanence by the will of God.

In this treatise, Khayyām considers the important problem of universal notions. Ibn Sīnā believed that universal notions are threefold: "before things", in the mind of God, like Plato's ideas, "in things", and "after things", in the mind of men, that is, as an abstraction of concrete things. Khayyām considers only two forms of the existence of general notions, "in things" and "in the soul", that is, in the mind of men. In mediaeval Europe, the doctrine of Ibn Sīnā was apprehended by the "realists", who believed that universal notions really exist, i.e. in the mind of God, e.g. by Aquinas, and the doctrine analogous to that of Khayyām, i.e. the doctrine that universal notions are only names, was the doctrine of the "nominalists".

Both these treatises are written in Arabic. Their Cairo manuscripts are now lost, but were printed at Cairo in 1335/1917 in the collection of treatises of Ibn Sīnā, Khayyām, and other Muslim philosophers called *Djāmiʿ al-badāʾiʿ*, and reprinted in the books of al-Nadwī and, with English translation, of Swami Govinda Tirtha. There are also Persian and Russian translations.

The third of his philosophical treatises, "The light of intelligence concerning the subject of universal knowledge" (*al-Ḍiyāʾ al-ʿaḳlī fī mawḍūʿ al-ʿilm al-kullī*), also in Arabic, is likewise printed in the above-mentioned collection, and reprinted by al-Nadwī. There are also Persian and Russian translations. The manuscripts of Khayyām's fourth philosophical treatise, "On existence" (*Risāla fī 'l-wudjūd*), also in Arabic, are located in Berlin and the Tehran Madjlis Library, reprinted by al-Nadwī, and, with English translation, in the book of Swami Govinda Tirtha. There are also Russian translations.

His fifth philosophical treatise is written in Persian, with manuscripts in London, Paris, the Tehran Madjlis Library and in the Khayyām Library. These manuscripts have three titles: *Risāla fī kulliyyāt al-wudjūd*, *Darkhwāst-nāma*, and *Risāla-yi silsilat al-tartīb*. It is also published in the books of al-Nadwī and, with English translation, by Swami Govinda Tirtha. There are also French and Russian translations. It was written for the son of Mu'ayyid al-Mulk, vizier to the later Saldjūks, and contains a detailed exposition of Ibn Sīnā's theory of "chain of order": the links of this chain are connected with celestial spheres, each link has a mind and soul, and is moved by activity and love. It also contains the classification of existing bodies and, following al-Ghazālī, a classification of "men who strive to know truth", comprising (1) the *mutakallimūn*, (2) scientists and philosophers, (3) the Ismā'īlīs and (4) the Ṣūfīs (although Khayyām himself was a scientist and philosopher, in this treatise, following al-Ghazālī, he believes that the highest place belongs to the Ṣūfīs).

(B.A. ROSENFELD)

'UMAR MAKRAM, AL-SAYYID (*ca.* 1755-1822), the charismatic leader of the common people in Cairo between 1791 and 1809. He mediated the return to power in 1791 of the banished *amīrs* Ibrāhīm Bey [*q.v.*] and Murād Bey, with whom he maintained a long and friendly relationship, became Egypt's *naḳīb al-ashrāf* [*q.v.*] in November 1793 and continued a political career that took him to a peak of political influence in the chaotic period between the arrival of the French in 1798 and his banishment in 1809.

He helped to organise popular resistance to the French, fled Cairo twice, in 1798 and 1800, and returned triumphantly with the Ottoman governor in 1801. Re-appointed *naḳīb al-ashrāf* in April 1802, he played a major role in organising the armed resistance of the citizenry against the Ottoman governor Khurshīd Aḥmad Pasha, in offering the governorship to Muḥammad 'Alī [*q.v.*] in 1805, in rallying the people behind the new governor when the central government tried to transfer him the following year, and in leading resistance to the British in 1807. He was one of Muḥammad 'Alī's major intermediaries with the dissident Mamlūk *amīrs* who controlled the countryside and became a primary agent in assigning and collecting taxes and "loans" for Muḥammad 'Alī.

As al-Sayyid 'Umar's popularity increased among the common people, whom he tried to protect from the excesses of the period, he felt secure enough to oppose some of Muḥammad 'Alī's demands for increased taxes, and in a particular dispute that erupted in 1809 refused to attend the governor in the citadel. Perceiving him as a political threat, Muḥammad 'Alī courted al-Azhar's [*q.v.*] scholars who, jealous of al-Sayyid 'Umar's popularity, political influence and wealth, connived with the governor to dismiss and banish him. He was expelled to Damietta in Augnst 1809 and moved to Ṭanṭā in April 1812. His dismissal ended the influence which the *'ulamā'* exerted on Muḥammad 'Alī. He was permitted to return to Cairo in January 1819 prior to undertaking the Pilgrimage, but was still popular among the people. He was banished again to Ṭanṭā in April 1822 and died there that same year.

Bibliography: Djabartī, *'Adjā'ib al-āthār*, ed. Būlāḳ, tr. M. Perlman and T. Philipp; Muḥammad Farīd Abū Ḥadīd, *al-Sayyid 'Umar Makram*, Cairo 1951; 'Abd al-'Azīz Muḥammad al-Shinnāwī, *'Umar Makram, baṭal al-mukāwama al-sha'biyya*, Cairo 1967.

(D. CRECELIUS)

'UMAR AL-NU'MĀN, an Arabic romance of a chivalric nature which forms part of the *1001 Nights* (nights 44 to 146 in the Būlāḳ ed., Chauvin no. 277), but also with independent attestations.

The intrigue, which is particularly complex (résumé in Chauvin, *Bibliographie*, vi, 112-24), falls within the general framework of the Arab-Byzantine wars, like the romance of Dhu 'l-Himma [*q.v.*], but unlike this last, has no reference to any recognisably historical substratum; the events narrated are in a vague past "before the caliphate of 'Abd al-Malik b. Marwān" but after the advent of Islam. This said, the romance deals with several themes and motifs common to Dhu 'l-Himma (see R. Paret, *Der Ritter-Roman von 'Umar an-Nu'mān und seine Stellung zur Sammlung von 1001 Nacht*, Tübingen 1927, ch. ii; M. Canard, *Delhemma, Sayyid Baṭṭāl et 'Omar al-No'mān*, in *Byzantion*, xii [1937], 183 ff.), as also with the great Arabic epic romances, like 'Antara, Baybars and even Sayf b. Dhī Yazan [*q.v.*]. In addition to what can be called proper chivalric themes, an important role is given to ruses, manipulations and disguising; in the story, these are essentially the devices of Dhāt al-Dawāhī, mother of the Byzantine king of Caesarea, an implacable enemy to 'Umar and his family. This elderly personage, malevolent and diabolically full of ruses, clearly reminds one of Dalīla, the protagonist of the story of the same name of the *1001 Nights* (Chauvin, no. 147); but it also closely recalls, except for the sex, the *ḳāḍī* 'Uḳba of Dhu 'l-Himma and the priest Djawān of Baybars. As against this maleficent personage, the first part of the story brings forward the chivalric figure of the Byzantine Amazon Abrīza, granddaughter of Dhāt al-Dawāhī, who gives hospitality to Sharr Kān, eldest son of 'Umar al-Nu'mān, and protects him against her own father's troops before accompanying him to Baghdād. This thematic material appears, however, combined with a complicated family intrigue, sc. the

latent conflict between 'Umar's two sons, Sharra Kān, son of a legitimate wife, and Ḍaw al-Makān, son of a concubine, which is to be resolved in the next generation, and after many vicissitudes, by the marriage of the daughter of the first, Ḳuḍiya Fa-Kān (herself the issue of an involuntary incestuous marriage with Nuzhat al-Zamān, full sister of Ḍaw al-Makān), with the son of the second, Kān wa-Kān. This last regains the throne of his grandfather 'Umar, which had been seized by a usurper, with the help of the Byzantine king of Caesarea, Rūmazān, who avers that he himself was born of a fleeting liaison between 'Umar and Abrīza. This schema is in fact a more complicated version of the story of Nūr al-Dīn and Shams al-Dīn (Chauvin, no. 270).

The insertion of the romance of 'Umar al-Nu'mān into the *Nights* has especially engaged the attention of orientalists because of the questions which it raises concerning the elaboration of the collection. For one thing, the story contains in effect several tales set within a frame, with the number varying with the different recensions. The most frequently found are: "The awakened sleeper" (Chauvin, no. 155), "The hashish eater" (no. 278) and "Tādj al-Mulūk" (no. 60, itself containing "'Azīz and 'Azīza", no. 71). Several mss. add to this list "Ghānim" (no. 188), which the late Egyptian recension (ZER, the "Zotenberg Egyptian Recension"), notably represented by the Būlāḳ edition, places, in its own series, just before "'Umar al-Nu'mān" (cf. Paret, *op. cit.*, ch. iii). Secondly, the presence and the position of "'Umar" in the *Nights* constitutes a test which allows us to classify the ms. recensions. The tale seems to be absent from the oldest recension, represented by the Galand ms. (ed. M. Mahdi, 3 vols., Leiden 1984; cf. especially, ii, 294-5), admittedly incomplete. On the other hand, it figures in the mss. considered as intermediate in date between the oldest recension and ZER (cf. D.B. Macdonald, *A preliminary classification of some MSS of the Arabian Nights*, in *A volume of Oriental studies presented to E.G. Browne*, Cambridge 1922, 304-21, and idem, *The earlier history of the Arabian Nights*, in *JRAS* [1924], 353-97). Amongst this group figures the Tübingen ms., which allows us to restore a long passage of "'Umar" which has disappeared from ZER (cf. Paret, *op. cit.*, ch. i). In these mss., however, it seems to be further on in the text than in ZER and, in particular, in Būlāḳ. One of them, the Benoît de Maillet ms., shows in this place serious disturbances in the numbering of the nights, indicating that the copyist combined several different recensions of the collection, one of which contained, amongst other things, the romance of 'Umar al-Nu'mān (cf. A. Chraïbi, *Note sur l'édition des Mille et une nuits de M. Mahdi*, in *SI*, lxxii [1990], 172-97). It all seems as if this ms. bears witness to a stage when "'Umar al-Nu'mān" began to be integrated within the "standard" recension of the *Nights* without having yet found the definitive place which it has in ZER.

Bibliography: Given in the article.

(J.-P. GUILLAUME)

'UMAR-SHAYKH MĪRZĀ, the name of two Tīmūrid princes.

1. 'Umar-Shaykh Mīrzā I, usually given as the eldest son of Amīr Tīmūr and said to have been born in 1354. He receives scattered notices in the histories of Tīmūr, such as Sharaf al-Dīn 'Alī Yazdī's *Ẓafar-nāma*, for a good showing in battle in Turkistan and at the Battle of Ḳundurča.

In 795/1393 he was appointed governor of Shīrāz. He was killed at Khurmātū in Kurdistān in Rabī' I 796/January 1394. First buried in Shīrāz, his body was later taken to Kish (Shahr-i sabz) for interment. Among his sons who played prominent roles in Tīmūrid history were Pīr Muḥammad, Rustam and Iskandar, and he was the ancestor of Sulṭān Ḥusayn Mīrzā of Harāt.

Bibliography: *Mu'izz al-ansāb* (ms., B.N. Paris); Sharaf al-Dīn 'Alī Yazdī, *Ẓafar-nāma*.

2. 'Umar-Shaykh Mīrzā II Küragān, born in 860/1456 in Samarḳand, the fourth of the Tīmūrid sultan Abū Sa'īd Mīrzā's many sons. To cement relations between the Tīmūrids and the Čaghatayid *khāns* of Mogholistān, Abū Sa'īd Mīrzā married three of his sons to three daughters of Yūnus Khān of Mogholistān. In this exchange, 'Umar-Shaykh Mīrzā was married to Ḳutlugh-Nigār Khānïm in 880/1475-6, and by this marriage he gained the title of *küragän* (Čingizid son-in-law). Ḳutlugh-Nigār Khānïm became the mother of Khānzāda Begim, who was married to the Uzbek Muḥammad Shaybānī (or Shībānī) Khān, and of Bābur [*q.v.*], who founded the Mughal dynasty in India.

As a child, 'Umar-Shaykh Mīrzā was appointed governor of Kābul. Later, duplicating Amīr Temür's appointment of his son 'Umar-Shaykh as governor of the Farghāna Valley, Abū Sa'īd Mīrzā appointed his son 'Umar-Shaykh as governor there under the tutelage of Khudāberdī Tūghčī Temürtash. After Abū Sa'īd's death in 1469, 'Umar-Shaykh Mīrzā quarrelled often with his brother Sulṭān-Aḥmad Mīrzā, who had inherited the throne in Samarḳand, and usually summoned his father-in-law Yūnus Khān to assist him. Once 'Umar-Shaykh Mīrzā had induced Yūnus Khān to come and had assigned him a livelihood in Akhsī; but when Sulṭān-Aḥmad retreated, 'Umar-Shaykh Mīrzā rebelled against Yūnus Khān, and the two fought (at a date unspecified in the sources) at the Battle of Täkkä Segritkü, in which 'Umar-Shaykh was taken prisoner but was magnanimously set free by his father-in-law.

On 4 Ramaḍān 899/8 June 1494, 'Umar-Shaykh Mīrzā's dovecote in Akhsī(kat) on the Syr Darya collapsed with him in it, and he was hurled down the ravine into the river to his death. His *amīrs* immediately appointed Bābur as his successor. Bābur characterises his father as a pious Ḥanafī who was devoted to the Naḳshbandī Khwādja 'Ubayd Allāh, fond of literature, so fat that he could scarcely fasten his coat and generous to a fault.

Bibliography: Bābur, *Bābur-nāma*; Khwāndamīr, *Ḥabīb al-siyar*; Mīrzā Ḥaydar Dughlāt, *Tārīkh-i Rashīdī*.

(W.M. THACKSTON)

'UMĀRA B. WATHĪMA b. Mūsā b. al-Furāt al-Fārisī, Abū Rifā'a, mediaeval Islamic historian, b. at Fusṭāṭ, where his father had installed himself, d. 23 Djumādā II 289/4 June 902.

Few biographers mention him separately from his father. His birth date is unknown, nor is anything definite known of his life. On the other hand, we owe to him one of the oldest compilations on the history of the Biblical prophets, the oldest which has survived in Islam in book form: the *K. Bad' al-khalḳ wa-ḳiṣaṣ al-anbiyā'* (ed. R.G. Khoury, *Les légendes prophétiques en Islam*, 1978). 'Umāra was part of the school of disciples of the great Egyptian masters, such as Abū Ṣāliḥ 'Abd Allāh b. Ṣāliḥ al-Djuhanī (d. 222/836 or 223/837), the secretary to al-Layth b. Sa'd, the great Maecenas and "uncrowned prince" of Egypt, with access to the celebrated private library of another great master, 'Abd Allāh b. Lahī'a, one which contained many original mss. and copies of originals of Egyptian provenance and from other Islamic lands

(see Khoury, *ʿAbd Allāh b. Lahīʿa*, 26 ff.). ʿUmāra's other masters were connected with his own father, who was the most important amongst them and on whom we have much more information; ʿUmāra transmitted the whole of his book. For more detail on the father and his book, and for bibliography, see WATHĪMA B. MŪSĀ.

(R.G. Khoury)

ʿUMĀRA al-YAMANĪ, Abū Ḥamza b. ʿAlī b. Aḥmad al-Ḥakamī, Nadjm al-Dīn, Arabic poet and prose writer, b. 515/1121 at Murṭān in Yaman, killed at Cairo in 569/1174.

In 531/1136-7 he began to study Shāfiʿī *fikh* at Zabīd, and then worked as a teacher, as a jurisprudent giving *fatwā*s and as a trader, travelling between Zabīd and Aden, this being in the time of Nadjāḥid rule there [see NADJĀḤIDS]. As well as connections with these last, he thus also acquired connections with the Shīʿī Zurayʿid ruler in Aden Muḥammad b. Saba' as well as with ʿAlī b. Mahdī of the Mahdids [*q.v.*], and was already addressing verses to local figures. Threats to his life compelled him to leave for Mecca and the protection of its *amīr* al-Ḳāsim b. Hāshim b. Fulayta, on whose behalf he started travelling to Fāṭimid Egypt in 549/1155, arriving in Cairo just after the murder of the caliph al-Ẓāfir and the regency of the Armenian commander Ṭalā'iʿ b. Ruzzīk [*q.v.*] for the child al-Fā'iz. After a second journey in 552/1157 he was to remain there for the rest of his life. Although still apparently adhering nominally to his Sunnī and Shāfiʿī *madhhab*, he adjusted to the intellectual and religious climate of Fāṭimid Egypt and began addressing eulogies to both the caliph and Ṭalā'iʿ; in those for the latter, like his master a Shīʿī, he mourned the *Ahl al-Bayt*, and after Ṭalā'iʿ's death, which he hymned in several impressive *marthiya*s or threnodies, he praised his son Ruzzīk. When the vizieral line of Ṭalā'iʿ was overthrown, ʿUmāra remained *persona grata* at the Fāṭimid court, having adapted to the new régime under the Arab Shāwar [*q.v.*], and likewise wrote eulogies of him.

Much information on ʿUmāra's contemporaries can be gleaned from his poems (*Dīwān*, ed. H. Derenbourg, very incomplete, his *Memoirs* (*al-Nukat al-ʿaṣriyya fī akhbār al-wuzarā' al-miṣriyya*) and nine *rasā'il* or epistles (see Derenbourg, *ʿOumâra du Yémen, sa vie et son œuvre*, i, *Autobiographie et récits sur les vizirs d'Egypte. Choix de poésies*, Paris 1897; ii (*Partie arabe*) *Poésies, épitres, biographies, notices en arabe par ʿOumâra et sur ʿOumâra*, 1902; (*Partie française*) *Vie de ʿOumâra du Yémen* [unfinished], 1904. The *Memoirs*, in particular, written in the first person and interspersed with ʿUmāra's own poetry, paint an interesting picture of court life and intrigues in Cairo. Another prose work of his is the *Ta'rīkh al-Yaman* (also known in its time as *al-Mufīd fī akhbār Ẓabīd*), ed., tr. and notes by H.C. Kay, *Yaman, its early mediaeval history by Najm ad-Dīn ʿOmārah al-Hakamī, also the abridged history of its dynasties by Ibn Khaldūn and an account of the Karmathians of Yaman by Abu ʿAbd Allah Baha ad-Din al-Janadi*, London 1892. It covers events in both northern and southern Yaman and a period of time stretching from before the author's time into his lifetime. It was written in 563/1167-8 at the instigation of al-Ḳāḍī al-Fāḍil [*q.v.*], who had been Ruzzīk's chancellor and was later to become chief secretary for the Ayyūbid Ṣalāḥ al-Dīn. ʿUmāra's *Memoirs* contain what are sometimes sharp evaluations of leading personages in the state, whilst his poetry ranges from eulogies of these statesmen to satires on those who tried to keep him from the ruler or who were niggardly in paying his court allowances and a few *ghazal*s or love poems, including a moving elegy on his wife's death.

When the Ayyūbids came to power in Egypt, ʿUmāra tried to adjust to the new régime under Shīrkūh and then Ṣalāḥ al-Dīn [*q.vv.*], but did not have much success with his poems addressed to them, hence composed an *ʿayniyya* of complaint, *shikāya*, to the sultan; a *lāmiyya* lamenting the fall of the Fāṭimids and expressing Ismāʿīlī religious concepts cannot have helped his position. In one verse of a poem, lamenting the last Fāṭimid caliph al-ʿĀḍid's death, he regretted the increase of what he called "the welfare of the depraved one" (*ṣalāḥ al-fāsid*), thereby giving offence to Ṣalāḥ al-Dīn himself (see ms. St. Petersburg, fol. 56b). Another verse was seized on by the orthodox *ʿulamā'*, who secured a *fatwā* against ʿUmāra accusing him of *kufr* (though al-Maḳrīzī, *al-Muḳaffā al-kabīr*, ed. Muḥammad al-Yaʿlāwī, Beirut 1991, viii, 755, considered this verse to have been inserted by the poet's enemies). This in itself might explain ʿUmāra's conviction and subsequent crucifixion by the sultan in 569/1174, but it is also possible, allege the historians, that he took part in an intended coup against the Ayyūbids; in any case, the intercession of al-Ḳāḍī al-Fāḍil, who had speedily learnt to serve new masters, could not save him.

Bibliography (in addition to references in the article): 1. Sources. There are relevant passages in the historians of the late Fāṭimid and early Ayyūbid periods, see Ibn Wāṣil, *Mufarridj al-kurūb*, ed. Shayyāl, i-ii, index; Abū Shāma, *Rawḍatayn*, Cairo 1288, i, 124 ff., 219 ff.; Maḳrīzī, *al-Muḳaffā al-kabīr*, viii, 740-56, and *Ittiʿāẓ al-ḥunafā'*, Cairo 1973, iii, 224-5; ʿImād al-Dīn al-Iṣfahānī, *Kharīdat al-ḳaṣr, ḳism shuʿarā' al-Shām*, iii, 101-41; Ibn Khallikān, ed. ʿAbbās, iii, 431-6, no. 489; Nuwayrī, *Nihāya*, xxviii, Cairo 1992, 325 ff.

De Smet (eds.), *Egypt and Syria in the Fatimid, Ayyubid and Mamluk eras*, Leuven 1995, 139-62; Brockelmann, I², 406-7, S II, 570. A historical novel dealing mainly with ʿUmāra was written by ʿAlī al-Djārim, *Sayyidat al-ḳuṣūr, ākhir ayyām al-Fāṭimiyyīn bi-Miṣr*, Silsilat Ikra', Cairo n.d.

(P. Smoor, shortened by the Editors)

al-ʿUMARĪ [see IBN FAḌL ALLĀH AL-ʿUMARĪ].

ʿUMAYR b. SHUYAYM [see AL-ḲUṬĀMĪ].

UMAYYA b. ʿAbd al-ʿAzīz, **ABU 'L-ṢALT** al-Dānī al-Ishbīlī, Spanish Muslim scholar who has left especially significant works in the fields of medicine, the natural and astronomical sciences and music (460-528/1068-1134).

1. Life

Probably born at Denia, he acquired a vast knowledge from his teacher, the *ḳāḍī* al-Waḳḳāshī [*q.v.*], inheriting from him an encyclopaedic knowledge of the sciences. He may have studied at Seville, but in 489/1096 arrived in Fāṭimid Egypt, where the caliph's vizier al-Afḍal had a lively interest in astronomy and soon introduced Abu 'l-Ṣalt to the caliphal court. It was in Egypt that he lectured and composed his most important works. But in *ca.* 500/1106-7 he fell into disgrace, allegedly, says Ibn Abī Uṣaybiʿa, because he failed to make materialise his promise to raise and keep afloat a ship with its valuable cargo which had

sunk off Alexandria. He was imprisoned by the angry caliph for three years, which he used for study and composition. On being freed, he intended to return to al-Andalus via al-Mahdiyya [*q.v.*], capital in Tunisia of the Zīrids, but was so well received by the ruler ʿAlī b. Yaḥyā that he remained at his court, as eulogist and chronicler, for the rest of his life, dying there. Abu 'l-Ṣalt had a son, ʿAbd al-ʿAzīz, who was also a great poet. On both the historical and literary levels, Abu 'l-Ṣalt was an important source for many later authors, such as Ibn Abī Uṣaybiʿa, Ibn al-Ḳifṭī, etc., and in their works numerous fragments of his works are given.

He was an abundant and eclectic author—medical man, philosopher, astronomer, musician, historian and poet, though he had no interest whatever in the religious sciences.

2. Works

Medicine. (a) *K. al-Adwiya al-mufrada*, of which Latin and Hebrew trs. were made, partial ed. Ibrāhīm b. Murād, in *al-Ḥayāt al-Th̲aḳafiyya*, iv/3 (1979), 153-68, ed. al-Kh̲aṭṭābī, in *al-Agh̲dh̲iya wa 'l-adwiya*, 8. See Steinschneider, in *Archiv für Pathologische Anatomie und für Klinische Medicin*, xciv (1883), 28-50. (b) *K. al-Intiṣār li-Ḥunayn b. Isḥāḳ ʿalā Ibn Riḍwān.* (c) *Fi 'l-ṭibb wa 'l-tandj̲īm wa 'l-alḥān.* (d) *K. al-Intiṣār fī uṣūl al-ṭibb.* On his place in the history of medicine, see Leclerc, *Histoire de la médecine arabe*, Paris 1876, ii, 74-5.

Philosophy. (a) *Taḳwīm al-dh̲ihn*, a treatise on Aristotelian logic, Span. tr. and study by A. González Palencia, *Rectificación de la mente*, Madrid 1915.

History. (a) *al-Risāla al-miṣriyya*, describing all he saw and those he met in Egypt, dedicated to the Zīrid prince Yaḥyā b. Tamīm, father of ʿAlī b. Yaḥyā, often cited by al-Maḳrīzī in his *Kh̲iṭaṭ*, ed. Cairo 1951, and also in Hārūn, *Nawādir al-makh̲ṭūṭāt*, i, 5056, partial tr. in A.L. de Prémare, in *MIDEO* (1964-6), 179-208. (b) *al-Dībādj̲a fī mafākh̲ir Ṣanhādj̲a*, on the Zīrid dynasty, known from citations in later North African historians; see Idris, *Zīrīdes*, i, Introd. pp. xvii ff. (c) *Fi 'l-adab wa 'l-ʿarūḍ wa 'l-taʾrīkh̲.* (d) *Taʾrīkh̲*, cited by Ibn al-Abbār and al-Balafīḳī.

Literature. (a) *K. Ḥadīḳa*, a poetical anthology on the model of al-Th̲aʿālibī's *Yatīma*, extracts cited by ʿImād al-Dīn in his *Kh̲arīdat al-ḳaṣr, ḳism sh̲uʿarāʾ Miṣr*, Cairo 1951-2, and ed. al-Dasūḳī and ʿAbd al-ʿAẓīm, Cairo 1964. (b) *K. al-Mulaḥ al-ʿaṣriyya*, dedicated to the poets of al-Andalus. (c) Eulogising poems addressed to al-Afḍal and Yaḥyā b. Tamīm, plus many other poems on varied themes. All these are now lost, but with numerous extracts in Ibn Abī Uṣaybiʿa and al-Maḳḳarī. (d) *Dīwān*, ed. M. al-Marzūḳ, Tunis 1974, and see J. Calvo Puig, in *Canfali* (1985), 16. (e) Different meanings of the word *nukta.* (f) *Dīwān rasāʾilihi.* (g) *Fi 'l-funūn.*

Astronomy. (a) *R. fi 'l-ʿamal bi 'l-asṭurlāb*, analysis in J.M. Millás Vallicrosa, *Assaig d'història de les idees fisiques i matèmatiques a la Catalunya medieval*, Barcelona 1931, 75-81. (b) *Ṣifat ʿamal ṣafīḥa dj̲āmiʿa taḳawwama bihā dj̲āmiʿ al-kawākib al-sabʿa*, the last of the equatoria of al-Andalus, studied by E.S. Kennedy, in *Physis*, xii (1970), 73-81, repr. in *Studies in the exact sciences*, Beirut 1983, 481-91, and by M. Comes, *Ecuatorios Andalusíes: Ibn al-Samḥ, al-Zarqalluh y Abū-al-Ṣalt*, Barcelona 1990, 1991. (c). *K. al-Wadj̲īz fī ʿilm al-hayʾa*, a summary of astronomy, regarded, however, as useless by the Fāṭimid astronomer Ibn al-Ḥalabī. (d) *Adj̲wiba ʿan masāʾil suʾila ʿanhā fa-adj̲āba*, the solution of six astronomical problems with the help of geometrical drawings.

Geometry. (a) *K. fi 'l-handasa* (*wadj̲īz*). (b) *al-Iktiṣār fi 'l-handasa.* (c) A *mukh̲taṣar* of Euclid's *Elements*, according to Ibn Kh̲aldūn.

Music. (a) *R. fi 'l-mūsīḳā*, see on it H. Avenary, in *Musica Disciplina*, vi (1952), 27-32, and in *Yuval*, iii (1974), 7-84; also I. Adler, *Hebrew writings concerning music in manuscripts and printed books from Geonic times up to 1800*, in *Répertoire internat. des sources musicales*, série B, ix/2, Munich 1975, 9-35.

According to the Arabic sources, Abu 'l-Ṣalt played the lute very well, and he seems to have introduced Andalusī music into Tunisia. He seems also to have undertaken the composition of an encyclopaedia on the scientific disciplines of the *Quadrivium*, and from some indications in Hebrew translations of his works, it apparently dealt with geometry, astronomy, arithmetic and music. The major part of the Hebrew translation made in 1395 by Benvenist ben Lavi of an arithmetical commentary by Abu 'l-Ṣalt (and also of a musical text) is in fact a translation of the relevant section of Ibn Sīnā's *Sh̲ifāʾ*. See T. Langermann, *Un nouvel extrait de l'ouvrage des nombres amiables. Le témoignage des textes hebreux médiévaux*, in *Arabic Science and Philosophy*, vi (1996), 63-87. On Abu 'l-Ṣalt and the history of science in Muslim Spain, see J. Samsó, *Las ciencias de los antiguos en al-Andalus*, Madrid 1992, 310-17. Abu 'l-Ṣalt is cited by many Jewish authors, such as Samuel of Marseilles and Isaiah ben Isaac ben Nathan of Cordova (both 14th century) and Profiat Duran (15th century).

UMAYYA b. ʿAbd Sh̲ams, ancestor of the Umayyads, the principal clan of the Ḳuraysh of Mecca. His genealogy (Umayya b. ʿAbd Sh̲ams b. ʿAbd Manāf b. Ḳuṣayy) and his descendants are given in Wüstenfeld, *Geneal. Tabellen*, U, V, and Ibn al-Kabbī, in Caskel-Strenziok, i, nos. 8 ff. Like all other eponyms of Arab tribes and clans, his actual existence and the details of his life have to be accepted with caution, but too great scepticism with regard to tradition would be as ill-advised as absolute faith in its statements. As those Umayyads who were living at the beginning of the Muslim epoch were only in the third generation from their eponym (e.g. Abū Sufyān b. Ḥarb b. Umayya), there is nothing improbable in the latter's being a historical personage; besides, there is nothing in tradition to suggest he was a mythical individual or a later invention. The name Umayya is common in Arab nomenclature, and is found in both northern and southern tribes; the meaning which anti-Umayyad polemic gives to it (a diminutive of *ama* "slave-girl") would make it a sobriquet; we also have the positive form Banū Ama as the name of a tribe (cf. Ibn Durayd, *Kitāb al-Ish̲tiḳāḳ*, 34).

The early genealogy of the Umayyad clan

Kuṣayy
|
ʿAbd Manāf
|
ʿAbd Shams
|
Umayya

Ḥarb — Abu ʾl-ʿĀṣ(ī) — al-ʿĀṣ(ī) — Abu ʾl-ʿĪṣ — Abū ʿAmr

Ḥarb → Abū Sufyān → Muʿāwiya I (= the ʿAnābisa)

Abu ʾl-ʿĀṣ(ī) → ʿAffān → ʿUthmān; Ḥakam → Marwān I

Abū ʿAmr → (= the Banū Abī Muʿayṭ)

(ʿUthmān ... Abu ʾl-ʿĪṣ: = the Aʿyāṣ)
Umayya was the cousin on the father's side of Hāshim b. ʿAbd al-Muṭṭalib, and tradition relates that, being jealous of the latter's influence, he challenged him to a *munāfara*, the judge of which was to be a *kāhin* of the Khuzāʿa. Being defeated, Umayya had to exile himself from Mecca for ten years (cf. al-Ṭabarī, i, 1090; Ibn Saʿd, i/1, 43-4). This story is evidently only an anticipation of the rivalry between the Umayyads and Hāshimids (ʿAlids and ʿAbbāsids) which forms the centre of the political struggle in the Arab empire during the first two centuries of the Hidjra (see al-Maḳrīzī, *K. al-Tanāzuʿ wa ʾl-takhāṣum fīma bayna Banī Umayya wa-Banī Hāshim*, ed. Vos, Leiden 1888, Eng. tr. and commentary, C.E. Bosworth, *Al-Maqrīzī's "Book of contention and strife..."*, Manchester 1981); it looks like a legend of learned origin. Similarly, the story of the embassy of Umayya and his nephew ʿAbd al-Muṭṭalib b. Hāshim and other chiefs of the Ḳuraysh to the Ḥimyarite king Sayf b. Dhī Yazan after the latter had defeated the Abyssinians (al-Azraḳī, in *Chron. d. Stadt Mekka*, ed. Wüstenfeld, i, 99; *Aghānī*[1], xvi, 75-7; Ibn ʿAbd Rabbihi, *al-ʿIḳd al-farīd*, Cairo 1293/1876, i, 131-3, etc.) is only intended to enhance the prestige of the Ḳuraysh and to prophesy the coming of Islam. Lastly, the truth seems very problematic to us of the stories of alleged eye-witnesses who had seen Umayya, a decrepit old man going through the streets of Mecca leaning on his son Abū ʿAmr (according to the historian al-Haytham b. ʿAdī, this was really his slave whom he afterwards adopted; cf. al-Ṭabarī, i, 967; *Aghānī*[1], i, 7-8).

We come down to historical ground with the statement (Azraḳī, 71, etc.) that Umayya, like his father ʿAbd Shams, commanded the Meccan army in time of war (*al-ḳiyāda*), a post which was later transmitted to his son Ḥarb and his grandson Abū Sufyān. Although we perhaps should not interpret this literally as implying a permanent military post (it seems to have been rather an occasional appointment), and although we find alongside of descendants of Umayya as military leaders, numerous members of other clans and even *ḥulafāʾ* (clients) (see on this question, Lammens, *Les "Aḥābīs" et l'organisation militaire de la Mecque*, in *L'Arabie occidentale avant l'hégire*, Beirut 1928, 273-93), there is nothing improbable in the story, especially if we regard the *ḳiyāda* as the direction of the military affairs of the community rather than the actual command of troops in the field. As a matter of fact, the descendants of Umayya never lacked talent either for military organisation or for politics.

At the beginning of Islam, the clan of the Banū Umayya appears as the most powerful in Mecca; it was represented by two main branches: the Aʿyāṣ and the ʿAnābisa (plural *a potiori* from the name ʿAnbasa common in the family). The former claimed to be descended from a son of the eponym whose names come from the same or a similar root (a common occurrence in Arabic nomenclature): Abu ʾl-ʿĪṣ, al-ʿUwayṣ, al-ʿĀṣī and Abu ʾl-ʿĀṣī; the others were represented by families of Ḥarb, Abū Ḥarb, Sufyān, Abū Sufyān (with his name ʿAnbasa, uncle of the celebrated Abū Sufyān b. Ḥarb), ʿAmr and Abū ʿAmr (the latter, whose name is said to have been Dhakwān, was probably, as already mentioned, an adopted son of Umayya). From a son of Abu ʾl-ʿĀṣī, al-Ḥakam, are descended, through Marwān b. al-Ḥakam, the Umayyad caliphs who succeeded Marwān, as well as the *amīrs* (later caliphs) of Andalusia. Some branches of the family of the caliphs settled in Egypt and Persia; although the greater part of the family was exterminated in 132/750 by the ʿAbbāsids, some of its members survived into much later times: among these were Abu ʾl-Faradj al-Iṣbahānī, the author of the *Kitāb al-Aghānī*, a descendant of a brother of Marwān I; his Shīʿī views contrasted strangely with his descent. Another son of Abu ʾl-ʿĀṣī ʿAffān, was the father of the caliph ʿUthmān; his descendants are numerous (among them the poet al-Ardjī; cf. *Aghānī*[1], i, 153-66), and several of them held important offices under the Umayyads. Of the line of al-ʿĀṣ b. Umayya, the most celebrated member is Saʿīd b. al-ʿĀṣ b. Saʿīd b. al-ʿĀṣ, governor of Kūfa under ʿUthmān, whose misdeeds were one of the main causes of the rebellion against the latter. The family of Abu ʾl-ʿĪṣ also produced a number of notable individuals under the Umayyads who were all descended from Asīd b. Abi ʾl-ʿĪṣ.

As to the ʿAnābisa branch, its most illustrious family is undoubtedly that of Ḥarb, whose son Abū Sufyān

plays so remarkable a part in the story of the origin of Islam. Through his son Muʿāwiya, he is the founder of the dynasty of Sufyānid caliphs, which early became extinct with Muʿāwiya II, son of Yazīd I. Another son of Yazīd, Khālid, has a legendary reputation as the founder of Arabic alchemy, and a grandson, Abū Muḥammad Ziyād b. ʿAbd Allāh b. Yazīd al-Sufyānī, was slain by the ʿAbbāsids at Medina in 132/750 (al-Ṭabarī, iii, 54). Yazīd b. Abī Sufyān, who was Muʿāwiya's predecessor in command of the army of Syria in ʿUmar's reign, left no descendants. Of the other sons of Abū Sufyān, ʿUtba, ʿAnbasa, Yazīd, Muḥammad, ʿAmr, only the two first had issue. A collateral branch of the Banū Umayya, descended from Abū ʿAmr b. Umayya, whose paternity, as we have seen, was not absolutely certain, included among its members al-Walīd b. ʿUḳba b. Abī Muʿayṭ b. Abī ʿAmr, governor of Kūfa under ʿUthmān and later a favourite of Muʿāwiya during his caliphate, also known as a poet (*Aghānī*[1], iv, 175-90). His father ʿUḳba had been made prisoner at the battle of Badr and put to death by Muḥammad, who could not forgive the insults which he had heaped upon him at the beginning of his preaching in Mecca; the shameful memory of the father weighed heavily on the son, and is often revived in ʿAlid polemics against the Banū Umayya. A son of al-Walīd, Abū Ḳaṭīfa ʿAmr, is also known as a poet (*Aghānī*[1], i, 7-18). All the members of the line of Abū ʿAmr settled in ʿIrāḳ and al-Djazīra.

(G. Levi Della Vida-[C.E. Bosworth])

UMAYYA B. ABI 'L-ṢALT b. Abī Rabīʿa, pre-Islamic poet and member of the Thaḳīf [*q.v.*] tribe of al-Ṭāʾif, related, through his mother Ruḳayya bt. ʿAbd Shams, to the Meccan aristocracy, with whom he enjoyed a close affinity, if his panegyrics on the notables ʿAbd Allāh b. Djuʿdān and Ḥarb b. Umayya [*q.v.*] and his threnody for the Meccans slain at Badr [*q.v.*] are genuine.

Umayya's existence has never been questioned (he is lauded in a poem by Surāḳa b. Mirdās [*q.v.*]), although every aspect of the traditional picture of him (given by Ibn Ḳutayba, *al-Shiʿr*, 279 as "he had read the ancient scriptures of the scriptures of Allāh and loathed the worship of effigies... In his poetry he would tell tales (*ḳiṣaṣ*) of the prophets and produce many terms unfamiliar to the desert Arabs which he had derived from the ancient scriptures and stories which he had derived from those of the People of the Book") has been subjected to sceptical scrutiny. Some 900 of his verses are extant, his poetry having been collected in *dīwān* form by Muḥammad b. Ḥabīb. T. Seidensticker, *The authenticity of the poems ascribed to Umayya Ibn Abī al-Ṣalt*, in J.R. Smart (ed.), *Tradition and modernity in Arabic language and literature*, Richmond 1996, 87-101, argues "that there might well be some authentic material" (96) among them.

Five elements should feature prominently in an assessment of what may plausibly be expected of Umayya's poetry: the religio-cultural environment of al-Ṭāʾif, Umayya's traditional identification as a *ḥanīf* [*q.v.*], his dealings with Muḥammad, the fragmentariness of his poetic remains and the motives for falsification. Umayya was a contemporary of Muḥammad, and they were reputedly hostile rivals: this would preclude influence on the latter by the former, as stipulated by Cl. Huart, *Une nouvelle source du Qoran*, in *JA*, ser. 10, vol. iv (1904), 125-67: see E. Wagner, *Grundzüge der klassischen arabischen Dichtung. Band II. Die arabische Dichtung in der islamischer Zeit*, Darmstadt 1988, 8-9. Umayya's non-traditional, so-called "religious" verse (if genuine) may attest to the circulation, in Mecca and its environs, if not throughout the peninsula, of the *ḳiṣaṣ* [see ḲIṢAṢ AL-ANBIYĀʾ] elements of the Ḳurʾān. There is at times considerable divergence between Umayya's poetic version of a tale and that in the Ḳurʾān. Legendary material contained in *tafsīr* [*q.v.*] is often adduced as a source, though this material must itself have a source, and J.W. Hirschberg's championing of pre-Islamic Haggadic material remains attractive (*Jüdische und christliche Lehren im vor- und frühislamischen Arabien*, Cracow 1939). Discussions of Ḳurʾānic echoes and ideas in Umayya's poetry should take account of research into such features of the poetry of the Mukhadramūn [*q.v.*]: see J.E. Montgomery, *The vagaries of the Qaṣīdah* (forthcoming), ch. 6, and might necessitate a revision of Umayya's *floruit* and his (spurious?) laudation of the Prophet. Only snippets of his verse have survived and although some long poems have been reconstructed, it is impossible to draw any conclusions as to their narrative style and techniques and also to determine whether the legendary "religious" material ever formed part of a (traditionally conceived) polythematic *ḳaṣīda* [*q.v.*]. F. Schulthess (*Umajja ibn Abi ṣ Ṣalt*, Leipzig 1911, 5-6) thought that he could discern in the clumsiness of Umayya's versification proof that he had taken his narrative materials from prose versions. Any emotional or character analysis of Umayya on the basis of such shakily attested texts is unwise.

Bibliography: Given in the text. See further the Bibl. given by Seidensticker in the article cited.

(J.E. Montgomery)

UMAYYA B. KHALAF b. Wahb b. Ḥudhāfa al-Djumaḥī, rich trader and chief of the clan of Djumaḥ in Mecca at the time of the Prophet.

He is known in early Islamic historical writing and the *Sīra* as an opponent of Muḥammad at the opening of his prophethood. He was a member of the delegation of Ḳuraysh to Abū Ṭālib complaining about Muḥammad's activities in Mecca. At the time of the first revelations he is said to have mocked the Prophet and defamed him, *hamazahu wa-lamazahu*. Consequently, Ibn Isḥāḳ [*q.v.*] sees this as having been the occasion for the revelation of sūra CIV (*al-Humaza*). Traditional Ḳurʾān exegesis is not so sure as Ibn Isḥāḳ about this (see e.g. al-Ṭabarī on sūra CIV). According to the *Sīra* and to exegesis, he was moreover one of the Meccan *ashrāf* to whom sūra CIX was addressed. His name is regularly linked with Bilāl [*q.v.*], Muḥammad's *muʾadhdhin* and one of the best-known representatives of the *mustaḍʿafūn*, the social group of the weakest Meccans, whom Umayya is said to have caused to be tortured after Bilāl's conversion. It was to be Bilāl—but according to other accounts, Khubayb b. Yasāf—who killed Umayya with his own hands at the battle of Badr [*q.v.*]. Although the relevant reports on this are controversial, they nevertheless state indubitably that Umayya's killing at Badr was understood as an

act of revenge on the part of the so-called *mustaḍʿafūn*. Umayya appears, moreover, in history as the *raʾīs al-kufr*.

UMAYYADS (Banū Umayya), the dynasty of caliphs which, from its centre in Syria, ruled the whole of the Arab Islamic territories from 41/661 to 132/750. All of the caliphs during this period are descendants of Umayya b. ʿAbd Shams [*q.v.*], a pre-Islamic notable of the tribe of Ḳuraysh of Mecca, but they represent two distinct lines within the clan of Umayya: the first three caliphs, descended from Abū Sufyān b. Ḥarb [*q.v.*], are referred to as Sufyānids; the remaining eleven, descendants of Marwān b. al-Ḥakam b. Abi 'l-ʿĀṣ [*q.v.*], as Marwānids. For convenience, a list of the Umayyad caliphs and the dates generally given for their caliphate is provided below; for detailed information on each caliphate see the article s.v.

41-60/661-80	Muʿāwiya I b. Abī Sufyān
60-4/680-3	Yazīd I b. Muʿāwiya I
64/683	Muʿāwiya II b. Yazīd I
64-5/684-5	Marwān I b. al-Ḥakam
65-86/685-705	ʿAbd al-Malik b. Marwān I
86-96/705-15	al-Walīd I b. ʿAbd al-Malik
96-9/715-17	Sulaymān b. ʿAbd al-Malik
99-101/717-20	ʿUmar II b. ʿAbd al-ʿAzīz
101-5/720-4	Yazīd II b. ʿAbd al-Malik
105-25/724-43	Hishām b. ʿAbd al-Malik
125-6/743-4	al-Walīd II b. Yazīd II
126/744	Yazīd III b. al-Walīd I
126/744	Ibrāhīm b. al-Walīd I
127-32/744-50	Marwān II b. Muḥammad b. Marwān I

1. The Umayyads in Western scholarship

Serious modern study of the period of the Umayyad caliphs began with the publication of Wellhausen's *Das arabische Reich und sein Sturz* in 1902. In that work, Wellhausen sought to recover the earliest layers of Muslim tradition relating to the period, to assess the historical value of variant accounts of events, and to write Umayyad history on the basis of the most reliable surviving evidence. It was made possible by the completion of the Leiden edition of the *Taʾrīkh* of al-Ṭabarī, which drew on, and made available to its readers, a large selection of no longer extant material from the late Umayyad and early ʿAbbāsid period compiled by traditional scholars. Wellhausen's book conveys a rather favourable image of the Umayyads and their officials as pragmatic politicians, creators and leaders of an empire based on the idea of Arab domination over non-Arabs, and largely unconcerned with religious matters unless forced to be by their pietist opponents. That image was shared by a number of Wellhausen's contemporaries and presented in a more exaggerated form in the many publications of the Belgian Jesuit scholar Lammens.

Although studies of aspects of Umayyad history not very different in method from that of Wellhausen (but making use of the greater number of traditional sources made available since his time) continue to appear, understandings of the period have naturally changed and developed in what is now more than ninety years since his book was published.

Wellhausen had assumed that an event could be reconstructed once the earliest available account of it had been discovered. Much of the work of Goldziher and Schacht, however, has shown that the religious and legal traditions about early Islam often represent a retrojection of later ideas and circumstances, and recent work, notably that of Albrecht Noth, has focused on the literary character of the traditional historiography, drawing attention to its stereotyped themes and forms and its nature as a continuously developing tradition difficult to assign to individual scholars, times or places. These arguments, although not specifically concerned with the period of the Umayyads, have nevertheless led some to question the basis upon which Wellhausen sought to isolate individual biases and viewpoints within the tradition and also the possibility of recreating the Umayyad period in detail from source material which dates, in the form in which we have it, from after the dynasty had been overthrown. Discussions of the motivation or moral evaluation of events or of individuals are especially difficult given the fundamentally hostile attitude to the Umayyads in the tradition (see below).

Responding to such problems, Patricia Crone has suggested the adoption of a prosopographical approach and exploitation of the minutiae which the Muslim literary sources contain about things such as the tribal and family background of individuals and their connexions through marriage. Another response has been a renewal of interest in other types of evidence (which Wellhausen also used)—non-Muslim literary materials, coins, inscriptions, art and archaeology. The Umayyad period is the first one of Islamic history for which such evidence is relatively substantial.

Wellhausen and others shared a view of the Umayyad empire as an expression of Arab national consciousness (as Levi Della Vida in his article *Umaiyads* in *EI*[1] termed it) and an embodiment of the principle of the rule of Arabs over non-Arabs. That has sometimes been conceived in racial terms and the overthrow of the Umayyads portrayed as the defeat of the Arabs by their subject peoples, particularly the Persians. While it still seems true, however, that the Umayyad state was founded on the principle of the rule of conquerors (Arabs) over conquered (non-Arabs), the term "Arab" is now understood as much as a cultural as an ethnic category, and the way in which under Umayyad rule Arabs and non-Arabs became assimilated to form a new Islamic society seems the most significant aspect of the period. As people of originally non-Arab descent formed genealogical links with Arab clans and tribes, as Arabic became the normal means of communication in large areas ruled by the Umayyads, and as the Arabs moved out of their garrisons and merged into the societies they had conquered, so a new "Arab" identity came to be formed, although its bearers would probably not have referred to themselves as Arabs.

The idea that the caliphs had little concern for religion, already criticised by Levi Della Vida, seems to have been the result of a too ready acceptance of the Muslim traditional view that the Umayyads generally were enemies of Islam. The work of Patricia Crone and Martin Hinds has drawn attention to the Umayyad (and later) caliphs' claim that they were God's deputies on earth. But questions about the way

in which Umayyad rule contributed to or affected the development and spread of Islam remain. In general, it is likely that Islam as it came to crystallise in the first two centuries of the ʿAbbāsid caliphate owes much to circles opposed to the Umayyads, although they responded to initiatives coming from the dynasty and its supporters. Schacht's discussion of "Umaiyad practice as the starting-point of Muhammadan jurisprudence" (in his *Origins of Muhammadan jurisprudence*, ²Oxford 1967, 190 ff.) portrays the early Muslim legal scholars endorsing, modifying or rejecting Umayyad practice as they thought fit. In particular the anachronism of regarding the Umayyads as representatives of Sunnī Islam is obvious, since the Sunnī tradition did not emerge in a developed form until after the fall of the dynasty, and the Umayyad conception of caliphal authority was at odds with that developed later by the Sunnī scholars. We can only see the Umayyads' own understanding of the religion of which they claimed to be the leaders indirectly, because Muslim tradition reflects the views of the dynasty's opponents rather than that of the caliphs. In his article in *EI*¹, Levi Della Vida stated that "it was precisely under their regime and partly under their stimulus that Islam established itself as a universalist religion", but it is not easy to generalise about the exact relationship between Umayyad rule and the development of various aspects of Islam.

Stress on the way in which Islam, both as a religion and as a culture, was still developing, and on the importance of the Umayyad period for its development, has brought a greater interest in elements of continuity between the pre-Islamic and Islamic Middle East. The Umayyad caliphate itself is now often understood as part of the period of transition between the classical world of Greece and Rome and that of Islam, frequently referred to as Late Antiquity.

2. The Umayyads in Muslim tradition

The image of the Umayyads which Muslim tradition presents is generally a negative one although sometimes alleviated by material which is implicitly or explicitly more favourable and which may be accounted for in various ways. Among a number of Ḳurʾānic passages sometimes explained as alluding to them, the most commonly cited is probably "the tree cursed in the Ḳurʾān" (*al-shad̲j̲ara al-malʿūna fi ʾl-ḳurʾān*) in sūra XVII, 60.

Symbolically, the enmity between the branch of Ḳuraysh to which the Umayyads belonged (the Banū ʿAbd S̲h̲ams) and the Banū Hās̲h̲im, the branch which engendered the Prophet, the ʿAlids and the ʿAbbāsids, is represented by the blood which flowed when the Siamese twin brothers ʿAbd S̲h̲ams and Hās̲h̲im, sons of ʿAbd Manāf, were separated by a sword cut. The historical conflict between the Umayyads and representatives of the "House of the Prophet" is thus portrayed as having its roots in the time of the two ancestors. According to the tradition, although they had been outdone in generosity and nobility of spirit by their Hās̲h̲imī rivals, by the time of the rise of the Prophet's power in Medina the Umayyads and Banū ʿAbd S̲h̲ams in general had established themselves as the leaders of the Ḳuras̲h̲ī opposition to Islam. Abū Sufyān, the father of the first Umayyad caliph, is shown as leader of the Meccan armies which attacked the Prophet at the battles of Uḥud and al-K̲h̲andaḳ [*q.vv.*], while the story of Muʿāwiya's mother, Hind bt. ʿUtba [*q.v.*], who chewed the liver of the slain uncle of the Prophet, Ḥamza b. ʿAbd al-Muṭṭalib, at Uḥud, is notorious.

As the power, authority and prestige of the Prophet in Medina increased in spite of their opposition, tradition tells us, the leading Umayyads reluctantly and at a late stage bowed to the inevitable and accepted Islam with questionable sincerity. Accounts vary concerning the precise moment when individual Umayyads like Abū Sufyān and his two sons Yazīd and Muʿāwiya finally professed Islam, but generally it is associated with the events leading up to the Prophet's conquest of Mecca. The derogatory name *al-ṭulaḳāʾ*, sometimes applied to the Umayyads by their opponents in the traditional reports, is explained as a reference to the fact that, in theory, they had become the property of the Prophet as a result of his conquest of Mecca but he had then magnanimously chosen to set them free (*ṭallaḳahum*). The Ḳurʾānic phrase *al-muʾallafa ḳulūbuhum* (IX, 60 [*q.v.*]), with reference to one of the categories of those entitled to receive payments from the collection of alms (*ṣadaḳāt*), is also often (but not always) associated with the Umayyads' acceptance of Islam: it is explained that the Prophet wished to attract certain prominent opponents, among them Abū Sufyān, to Islam by making them gifts, that being a necessity for maintaining their adherence.

Having accepted Islam, certain Umayyads, including Abū Sufyān, are reported to have been entrusted with important tasks and offices by the Prophet and the early *Rās̲h̲idūn* caliphs [see AL-K̲H̲ULAFĀʾ AL-RĀS̲H̲IDŪN, in Suppl.]; in particular, Yazīd and Muʿāwiya were sent by Abū Bakr [*q.v.*] among the leaders of the army sent to Syria. Nevertheless, the traditional texts, in varying degrees, imply that the rise of Muʿāwiya to the caliphate in Syria was a result of trickery and scheming as much as of his own talents. The murder of the caliph ʿUt̲h̲mān, it is sometimes suggested, was exploited, perhaps desired or even orchestrated, by his Umayyad relatives in order to call ʿAlī's title to the caliphate into question, and the rather ambiguous reports about the raising of the *maṣāḥif* at Ṣiffīn [*q.v.*] and the ensuing meeting of the arbitrators [see AD̲H̲RUḤ] merge to convey the impression that Muʿāwiya and his supporters duped the pious but gullible proponents of ʿAlī.

The negative portrayal of the Umayyads in tradition is evident above all in the refusal to recognise their rule as true caliphate and to insist that it was merely kingship (*mulk*): they were secular kings like the Byzantine and Sāsānid rulers. This accusation is associated particularly with Muʿāwiya's introduction of the principle of hereditary succession when he named his son Yazīd to succeed him, the assumption being that the Sunnī theory of an elective caliphate had previously been established and that Muʿāwiya was acting against it. A similar assumption underlies the view that the use by the Umayyads of the title *K̲h̲alīfat Allāh* was a corruption of the proper title *K̲h̲alīfat Rasūl Allāh* motivated by arrogance. The same motive is also adduced to account for such things as the custom of the Umayyads and their governors to sit on the *minbar* [*q.v.*] while delivering a *k̲h̲uṭba* and, furthermore, to put the *k̲h̲uṭba* before the prayers on the two *ʿīds*. Individual Umayyads, like Yazīd, are attributed with habits and characteristics such as drunkenness and wantonness which were repulsive from an Islamic point of view, but the emphasis on these in some reports is perhaps more a reflection of, than a reason for, the traditional refusal to accept the Umayyads as caliphs in a full sense.

As for the policies and actions of the Umayyads, there are several which, for Muslims of later time, would carry the message that these were not properly Islamic rulers. The army sent by Yazīd to the

Ḥidjāz, which sacked Medina and went on to besiege Mecca, bombarding the holy city with rocks from catapults (*manḏjanīḳ*) and damaging the Kaʿba so badly that it had to be demolished and rebuilt, is an obvious example. A similar bombardment is reported when Mecca was again besieged by an Umayyad army commanded by al-Ḥadjdjādj some ten years later. The killing of the grandson of the Prophet, al-Ḥusayn b. ʿAlī, together with a large number of his household and supporters, at Karbalāʾ [*q.v.*] is another crime laid at their door. The recurrent refusals to allow the non-Arabs to enter Islam as *mawālī* [see MAWLĀ] would appear similarly as un-Islamic. The caliph al-Walīd II was even accused of shooting at the Ḳurʾān with an arrow.

Literary works were produced containing lists of these and other misdeeds of the Umayyads before and after their entrance into Islam, sometimes comparing them with the succeeding dynasty of ʿAbbāsid caliphs. Among such works were the *Risāla fī ʾl-nābita* (*Risāla fī banī Umayya*) of al-Djāḥiẓ [*q.v.*] and the *Kitāb al-Nizāʿ wa ʾl-takhāṣum fīmā bayna banī Umayya wa-banī Hāshim* of al-Maḳrīzī [*q.v.*]. A similar but shorter text was the so-called *Kitāb fī shaʾn banī Umayya* which was issued by the ʿAbbāsid al-Muʿtaḍid in 284/897 at the same time as he ordered the cursing of Muʿāwiya from the *minbars* (al-Ṭabarī, iii, 2164-78).

Any general summary of the image of the Umayyads in Muslim tradition must also, however, take account of elements which might alleviate the negative judgments resulting from the above. Among the caliphs of this dynasty, ʿUmar II b. ʿAbd al-ʿAzīz and, to a lesser extent, Yazīd III b. al-Walīd, are presented more favourably and given legitimacy as caliphs in the tradition. The former in particular, a grandson of the first ʿUmar on his mother's side, is a significant figure in Sunnī tradition and is sometimes referred to as the fifth of the Rightly-Guided Caliphs. Even certain Umayyad caliphs to whom tradition does not grant legitimacy might be respected for aspects of their achievements. Thus the ʿAbbāsid al-Manṣūr is said to have admired the fiscal prudence and administrative capacity of the Umayyad Hishām, while some positive judgement of both Muʿāwiya and ʿAbd al-Malik is implied in the designation "year of unity" (*ʿām al-djamāʿa*) for the years in which they ended the discord and civil war (*fitna*) which each had faced before establishing himself as caliph.

Any attempt to understand the image of the Umayyads in Muslim tradition must take account of a number of factors. In the first place, the historical tradition which has come down to us largely emanates from circles hostile to the dynasty, was transmitted and committed to writing mainly by religious scholars, and achieved the form in which we know it under the caliphate of the ʿAbbāsids. On the other hand, the rise to predominance of the Sunnī form of Islam and the increasing differentiation between it and the Shīʿī tradition, opposition between Sunnī traditionalists and some of the ʿAbbāsid caliphs, and a general concern for the historical legitimation of the Sunnī Islamic community as the direct descendant of that of the Prophet, may have been factors working to moderate the general hostility of the tradition to the Umayyads.

Above all, however, in attempting to understand the treatment of the Umayyads in tradition account has to be taken of the changing nature of Islam. The Umayyads were judged according to criteria which were a concomitant of the development of Islam during their rule.

3. Historical survey

Given the origins and character of the historical tradition, and the date in which it achieved the form in which we know it, discussions of Umayyad history need to be tentative. It is reasonable to suppose, however, that the events reported in the Muslim literary tradition, the names referred to and, generally, the dates supplied, reflect an historical reality. When it is possible to check the basic details against the evidence of such things as coins, inscriptions and non-Muslim literary works, they are generally confirmed.

The Sufyānid period

The most likely explanation for the emergence of Syria [see AL-SHĀM] as the political centre of the Arab empire following the First Civil War was the fact that it had been the seat of Muʿāwiya, the victor in the Civil War, for over 20 years before he obtained the caliphate. Beyond that, and partly explaining Muʿāwiya's victory, there were conditions which made Syria different from the other territories conquered by the Arabs. Syria must have had a relatively large Arab population, some of it dating from before the conquest, distributed across the whole country rather than enclosed within garrison cities. Furthermore, central Syria was dominated by one tribal group, the Ḳuḍāʿa [*q.v.*], rather than divided between a multiplicity of competing ones. Taken together, these facts would have allowed Muʿāwiya to establish his court in an existing administrative centre, to continue the administrative tradition which had existed under Byzantine rule, and to avoid the need constantly to play off the local tribal groups against one another.

From Syria, Muʿāwiya and his immediate successors exercised control through a small number of powerful governors. Prominent among them were the Thaḳafīs [see THAḲĪF] Ziyād b. Abīhi [*q.v.*] and then Ziyād's son ʿUbayd Allāh b. Ziyād [*q.v.*]. These governors appointed sub-governors and sought to control the Arab tribes by means of the powerful tribal notables, the *ashrāf* [see SHARĪF]. The non-Arabs, the majority of the population, were regarded mainly as a source of revenue for the élite, the Arabs.

It has become common to portray this period as one during which the caliphs were little more than glorified tribal *shaykhs*, indicated by the standard references to Muʿāwiya's *ḥilm* [*q.v.*] and the delegations (*wufūd*) of tribal notables to his court. Muʿāwiya himself may have encouraged this image, for the so-called Maronite Chronicle refers to his refusal to wear a crown (*CSCO*, Scr. Syri, 3rd series, iv, 71 (text) = 56 (tr.)), and the reference to him as *protosymboulos* by the Byzantine chronicler Theophanes is well known. Nevertheless, it is obvious that the human and material resources available to Muʿāwiya made his power and authority much greater than that of even the most important tribal leaders.

In their administration, the Sufyānid caliphs seem to have continued largely with the personnel and systems which they had inherited from the Byzantines and Sāsānids. Government records [see DĪWĀN] continued to be maintained in the languages used before the coming of the Arabs, and coins minted under the previous régimes continued in circulation [see DĀR AL-ḌARB]. The Maronite Chronicle refers to the refusal of the Syrians to accept a coin issued by Muʿāwiya since it did not bear a cross (*CSCO*, Script. Syri, 3rd series, vol. iv, 71 = 55-b).

Apart from that connected with Ḥudjr b. ʿAdī [*q.v.*], the period saw little opposition to Umayyad rule until after the death of Muʿāwiya. During his own lifetime he had been largely successful in preparing the suc-

cession of his son Yazīd, but on the latter's accession opposition was manifested, not by tribal figures, but by a small group of descendants of some of the leading companions of the Prophet in Medina. Chief among them were al-Ḥusayn b. ʿAlī and ʿAbd Allāh b. al-Zubayr [*q.vv.*]. Al-Ḥusayn's revolt was crushed at Karbalāʾ, but Ibn al-Zubayr fled to Mecca and was still refusing to accept Yazīd's caliphate when the latter, who had sent an army to the Ḥidjāz [see AL-ḤUṢAYN B. NUMAYR; MUSLIM B. ʿUKBA] in order to enforce recognition of him by Ibn al-Zubayr and others, died. Although Yazīd was succeeded in Syria by his son Muʿāwiya II, the new caliph received limited recognition and was shortlived. The death of Yazīd in effect marked the temporary collapse of the Umayyad caliphate and opened the period of the Second Civil War.

The Second Civil War

The period between the death of Yazīd b. Muʿāwiya and the final defeat of Ibn al-Zubayr in 73/692 saw the takeover of the caliphate by Marwān b. al-Ḥakam and then his son ʿAbd al-Malik, of the Abu 'l-ʿĀṣ branch of the Umayyad family. Those two oversaw the gradual reimposition of Umayyad control in all of the territories which had been ruled by Muʿāwiya. The way in which the succession was transferred to Marwān and then to his descendants was complex and is to some extent obscure, but ultimately depended on the fact that he was supported by the leader of the Ḳuḍāʿa, Ḥassān b. Mālik [*q.v.*], and on the victory of the forces of the Ḳuḍāʿa over those of the rival confederation of Ḳaysī tribes, supporting Ibn al-Zubayr, at the battle of Mardj Rāhiṭ [*q.v.*] in 64/684.

Marwān, who ruled only for about nine months, restored Umayyad control over Egypt, but ʿAbd al-Malik's achievement in destroying Zubayrid rule in ʿIrāḳ and the Ḥidjāz was a more drawn-out process, interrupted by the need to enforce his authority in Syria, where his right to the caliphate was challenged by his relative ʿAmr b. Saʿīd al-Ashdaḳ [*q.v.*]. The defeat of Muṣʿab b. al-Zubayr [*q.v.*] in ʿIrāḳ in 71/691, however, was followed by the dispatch of an army under al-Ḥadjdjādj [*q.v.*] against the rival caliph himself, who was killed in the fighting which led to al-Ḥadjdjādj's capture of Mecca in the following year.

The Second Civil War was significant for the future of the Umayyad caliphate in a number of ways. First, the breakdown of Umayyad authority and the struggles over the succession had been accompanied by the polarisation, for the first time, in Syria, in ʿIrāḳ and in Khurāsān, of the Arabs into two main hostile tribal groups. These had different names in different regions: in Syria, Kalb (the dominant tribe of Ḳuḍāʿa) and Ḳays, in ʿIrāḳ and the east, Tamīm and Azd [*q.vv.*] or, more generally, Muḍar and Yaman [*q.vv.*]. The formation of these groups, probably ultimately a result of migrations and struggles for influence, land, and wealth which had been taking place under the Sufyānids, now acquired a new importance as the various parties involved in the civil war sought to establish and maintain their position by winning the support of one tribal group or another.

Secondly, the movement led by al-Mukhtār [*q.v.*], who had seized control of al-Kūfa during the Zubayrid interregnum in ʿIrāḳ, although it had been suppressed, had demonstrated the potential importance of the *mawālī* for the first time and, furthermore, provided the basis from which sprang the later movement of the Hāshimiyya [*q.v.*], instrumental in organising the revolt which was eventually to overthrow the Umayyad caliphate.

Thirdly, the collapse of Umayyad authority revealed the weakness of the rather loose and decentralised administrative structure which had characterised the Sufyānid period. Throughout the territories over which the Umayyads claimed authority, the lack of commitment to the Umayyads on the part of many of the *ashrāf* had been demonstrated. The extension of central authority and movement towards a more formally-organised army under the Marwānids was probably a reaction to that.

The Marwānid restoration

The caliphates of ʿAbd al-Malik and his son al-Walīd, linked by the presence of al-Ḥadjdjādj as governor of ʿIrāḳ and the east from 75-95/694-714, were distinguished by significant developments in the administration and in the public face of the Umayyad state. It is to this period that the introduction of the first properly Islamic coinage and the beginning of the keeping of the government records in Arabic are dated, and the Dome of the Rock in Jerusalem [see AL-ḲUDS], built by ʿAbd al-Malik in 72/691-2, represents the emergence of a recognisably Islamic style of architecture. Furthermore, its inscriptions are the first dateable evidence of substantial Ḳurʾānic material and of the use of the word *islām*, apparently as the designation of the religion which the caliph represented. Other major public buildings dating from this period are the Aḳṣā mosque, the mosque of Damascus (incorporating the former church of St. John), and the mosque of the Prophet in Medina [see MASDJID].

The breakdown of order in ʿIrāḳ during the Second Civil War had allowed the appearance of a significant Khāridjī threat [see AZĀRIḲA; KHĀRIDJITES; SHABĪB B. YAZĪD] and al-Ḥadjdjādj's first major task in ʿIrāḳ was to defeat it, using the military talents of al-Muhallab [*q.v.*]. To that end he put considerable pressure on the local *ashrāf* who were refusing to participate in the campaigns against the Khāridjīs and, furthermore, brought troops from Syria to ʿIrāḳ. Thus a new way of ensuring Umayyad authority in the provinces was introduced. Subsequent reinforcements brought from Syria made necessary the construction of a new garrison town to quarter them [see WĀSIṬ].

It was probably the resentment of the *ashrāf* at the intensification of government pressure which was the main cause of the revolt which al-Ḥadjdjādj had to face from ʿAbd al-Raḥmān b. al-Ashʿath and the army with which he had been sent to Afghānistān [see IBN AL-ASHʿATH]. This revolt, which attracted diverse elements opposed to the government and took on a significant religious tone, eventually aimed at removing not only the ʿIrāḳī governor but also the caliph ʿAbd al-Malik himself, and it came close to achieving its aims. Its defeat only led to the further strengthening of government control.

A significant element in Ibn al-Ashʿath's revolt was the non-Arab *mawālī*. Some 19th century scholars even interpreted his movement as an expression of their discontent, and, although that interpretation no longer seems tenable, it is true that under al-Ḥadjdjādj the problem of the non-Arabs who wished to enter Islam (whatever that involved at the time) became increasingly apparent. We hear of the attempt by many non-Arab cultivators to leave their lands and enter the garrison cities of ʿIrāḳ, attempting to join the Arab soldiers there as clients and claiming the status of *mawālī*. Al-Ḥadjdjādj's response was to round them up and have them sent back to their lands. The motive for this flight from the land to the towns was certainly a desire to avoid taxation as well as to find an alternative source of income, and al-Ḥadjdjādj's actions represent a realisation of the consequences for

the treasury if the non-Arabs were allowed to abandon their lands and villages in this way. The manifestation of the problem at this time may well reflect the increasing fiscal demands of the state as well as greater efficiency in tax collection in the early Marwānid period.

The nature and development of the taxation system [see ḌARĪBA; DJIZYA; KHARĀDJ] under the Umayyads has been a subject of debate. D.C. Dennett sought to refine what he saw as the over-simple presentation of Wellhausen, and argued that there was a variety of systems of taxation, differing from province to province, but that, almost everywhere, at the level of the taxpayer there was a dual system of poll tax and land tax. In spite of the detail amassed by Dennett and the clarity with which it is presented and interpreted, however, it is difficult to see that his conclusions make a great difference to our understanding of the actions of the non-Arabs who wished to leave their lands and accept Islam. Acceptance of Islam would only result in a substantial alleviation of or escape from taxation if it was acompanied by flight from the land.

The development of factionalism in the army and the continuing problem of the mawālī

Hostility between Muḍar and Yaman became more prominent in the eastern territories of the caliphate in connection with the career of Yazīd b. al-Muhallab al-Azdi [see MUHALLABIDS]. As a result of his efforts to establish a strong position for his family and tribe in Khurāsān, Ibn al-Muhallab came to be regarded as a champion of the Yaman in general. His complicated and vacillating relationship with the Umayyad caliphs and their representatives culminated in his revolt, centred on Baṣra, in the caliphate of Yazīd II. Although, like Ibn al-Ashʿath, he won the support of diverse elements, his identification with the Yaman had the result that his defeat was regarded as a humiliation for them, and the coming of the Ḳaysī ʿUmar b. Hubayra [see IBN HUBAYRA] as governor to ʿIrāḳ resulted in the installation of predominantly Ḳaysī governors in the east. Furthermore, the army which had been sent from Syria to defeat the revolt, being drawn from the Syrian-Mesopotamian frontier region, was also predominantly Ḳaysī. Revenge for the Muhallabids was one of the slogans of the Yamanī supporters of the movement which overthrew the Umayyad caliphate in 132/749-50.

From this point onwards, the appointment of governors in ʿIrāḳ and the east was associated with changes in the position of one of the factions relative to the other. The appointment of Khālid b. ʿAbd Allāh al-Ḳasrī [*q.v.*] at the beginning of the caliphate of Hishām b. ʿAbd al-Malik, however it was intended, was interpreted as a reversion to a pro-Yamanī policy, while the removal of Khālid in favour of Yūsuf b. ʿUmar al-Thaḳafī in 120/738 signalled the restoration of Muḍarī domination.

The nature of the groups designated by names such as Yaman and Muḍar has been debated. The assumption that they represented real tribal alliances has been challenged by Patricia Crone's argument that they should be understood as factions in the army, certainly related to the tribal groups whose names they bear, but not identical with them. A group in the army called Tamīm would be likely to have originated from the tribe of Tamīm but their aims and interests were not identical with those of Tamīmīs outside the army. M.A. Shaban's suggestion that the groups had distinct political programmes, the Yaman being broadly against military expansion and in favour of liberal policies towards the *mawālī*, the Muḍar favouring an imperialist and pro-Arab policy, has also been strongly argued against by Crone.

The acceptance of Islam by non-Arabs, at various times and places, continued to be a problem and seems to have taken on a more religious significance with the passage of time. The attempts of Umayyad governors to deny or restrict the rights claimed by the *mawālī* came increasingly to be portrayed by opponents of the dynasty as attempts to deny access to Islam in a religious sense, and the pious depicted the Umayyads as enemies of Islam. Complaints about the behaviour of the governor of Khurāsān al-Djarrāḥ b. ʿAbd Allāh al-Ḥakamī [*q.v.*], who sought to limit or ignore the claims of the local *mawālī* to be freed from payment of the *kharādj* and to receive pay for their fighting alongside the Arabs in the army, were led by Abu 'l-Ṣaydā' al-Ḍabbī, who is portrayed as a spokesman of the pious. In response to the complaints, the caliph ʿUmar II removed al-Djarrāḥ from his governorate. A similar episode about a decade later when al-Ashras b. ʿAbd Allāh al-Sulamī was governor of Khurāsān led to a rising which, in conjunction with an invasion by the Turks, resulted in the loss of territory and considerable military embarrassment. It is remarkable that local non-Arab leaders are reported to have urged the Umayyad governor to be firm against the demands of the *mawālī*, fearing that they would be unable to met the financial demands made on them by the government if large numbers of their communities were allowed to become "Arabs" and share in the privileges of the Arabs. Discontent among the *mawālī* could be used by Arab opponents of the Umayyads [see AL-ḤĀRITH B. SURAYDJ] and was eventually a powerful element in the movement which overthrew their caliphate.

It is generally accepted that ʿUmar II pursued a more sympathetic policy towards the demands of the *mawālī* than did other Umayyad rulers. In tradition, he appears as a champion of the equality of Arabs and non-Arabs within Islam. The nature of the evidence, however, makes it difficult to be precise about the measures he adopted. The fiscal decree reported by Ibn ʿAbd al-Ḥakam (see H.A.R. Gibb, *The fiscal rescript of ʿUmar II*) leaves many unanswered questions and its authenticity is debatable, and the shortness of his caliphate perhaps limited the effect of any measures he introduced. However we regard his caliphate, the episode associated with al-Ashras al-Sulamī shows that he did not solve the problem, and it is reported that when Naṣr b. Sayyār [*q.v.*] became governor of Khurāsān he found many Muslims paying taxes while some non-Muslims were able to avoid them.

The Third Civil War

The ingredients of the Third Civil War, which began with the rebellion against al-Walīd II in 126/744 and lasted until Marwān II had, by about 129/747, established control over the central provinces of the caliphate, were in some respects similar to those of the second. It did not, however, conclude with the re-establishment of Umayyad rule on a firm footing but with the beginning of its end. Although Marwān II emerged victorious, the events leading up to that can, in retrospect, be seen to have fatally weakened the Umayyad caliphate in its heartlands and made it incapable of resisting successfully the revolt which shortly afterwards began in its far north eastern province of Khurāsān. The most important consequences were that the Yamanī-Muḍar factionalism, which after the First Civil War had been confined to the eastern caliphate, now infected Syria again, and that the unity of the Umayyad house itself was shat-

tered. Different members of the family competed and fought for the caliphate, and possibly fortuitous and accidental alignments between contenders and factions came to harden so that by the time of his victory Marwān II was positively identified with the interests of Ḳays (Muḍar). In general, the result of the period between 744 and 747 was to reduce Syria to the level of the other provinces. The special conditions which had given strength to Muʿāwiya, and supported the dynasty thus far, no longer pertained. In the fighting major Syrian centres like Ḥimṣ, Damascus and Jerusalem were damaged, and it is of more than symbolic significance that Marwān II established his court at Ḥarrān [*q.v.*] in the Djazīra rather than in Syria.

The fall of the dynasty

Although there are still many obscurities and unanswered questions about the development and nature of the movement which destroyed the Umayyad caliphate [see ʿABBĀSIDS], in general terms the fall of the dynasty can be understood as a result of the conjunction of a number of the themes which had developed during its period of power.

One of those was the factionalism among the fighting men. Mistrust of Marwān II and his Ḳaysī régime (his governor in ʿIrāḳ was Yazīd b. ʿUmar b. Hubayra, whose father had supplanted the Azdī Ibn al-Muhallab in the same post) by Yamanīs in the Khurāsānī army led to a revolt against the governor of the province, Naṣr b. Sayyār. The governor was pushed out of the provincial capital, Marw, and, although an agreement between him and his opponents among the soldiers was patched up when they heard the news of the rising of the Hāshimiyya in the villages outside Marw, it was not long before the leader of the Hāshimiyya was able to exploit the divisions and, in effect, to recruit the Yamanīs to his cause.

The Hāshimiyya was another manifestation of support for the claims of ʿAlids and members of the *ahl al-bayt* to the imāmate against those of the Umayyads. In particular, it was linked with the movement led by al-Mukhtār in Kūfa at the time of the Second Civil War. Support for the Hāshimiyya appears to have come initially from the mixed Arab and non-Arab population of Khurāsān, alienated by Umayyad policies towards the non-Arabs who wished to accept Islam. By the time the revolt in Khurāsān began in 129/747, the driving force behind, if not the official leader of, the Hāshimiyya there was Abū Muslim [*q.v.*].

By allying with the Yamanī faction in the army, led by the Azdī ʿAlī b. Djudayʿ al-Kirmānī, Abū Muslim was able to enter Marw and shortly afterwards to send an army commanded by Ḳaḥṭaba b. Shabīb al-Ṭāʾī [*q.v.*] westwards in pursuit of Naṣr b. Sayyār and his supporters who had fled to Nīshāpūr. That army, having taken Nīshāpūr, continued its progress through north-western Persia and into ʿIrāḳ, defeating Umayyad armies at Ḳūmis and Nihāwand, and eventually took Kūfa, where, in Rabīʿ II 132/November 749, Abu ʾl-ʿAbbās al-Saffāḥ was proclaimed as the first ʿAbbāsid caliph.

At the beginning of the following year, the defeat of the Umayyad army at the decisive battle on the Upper Zab led to the flight of Marwān II through Syria to Egypt, pursued by an ʿAbbāsid force. Of the Syrian towns, only Damascus offered much resistance to the new power. Tracked down in Egypt, Marwān II and a few followers were killed.

4. Arabisation and Islamisation under the Umayyads

The importance of the period of the Umayyad caliphate lies chiefly in the fact that it was during it that the lands extending from central Asia to the Maghrib and al-Andalus were first significantly Islamised and Arabised, both processes which could be analysed as consisting of various components and achieving various levels of fulfilment. The most obvious indicator of Islamisation would be acceptance of Islam by an individual or a community, while Arabisation would be most obviously indicated by adoption of Arabic as the normal language for everyday use. At this most obvious level, it is clear that at the beginning of the Umayyad period there must have been a relatively small number of people who regarded themselves as Muslims or who spoke Arabic; by the fall of the dynasty both categories had expanded considerably. Our evidence for both processes is patchy and questionable and our conclusions necessarily impressionistic, but that general conclusion seems sound.

Although often connected, Islamisation and Arabisation in this period were not necessarily simultaneous processes, and not all the regions under Umayyad rule were affected by them to the same extent or at the same speed. Islam developed as a way of life in which religion was an important but not the only element, so that for some communities Islamisation might be envisaged as a process of cultural adaptation not necessarily involving a formal acceptance of Islam; and the development and spread of Arab identity in the regions under Arab rule had consequences not always identical with the spread and development of the Arabic language itself.

When one reads about individuals or groups entering or accepting Islam in the Umayyad period (or attempting to do so), it is therefore advisable to avoid the primarily religious connotations of the word "conversion"; the concept of Islamisation allows us to envisage a process of social change which may or may not have included a conscious change of religious identity but which would often have prepared the way for it. In its primary sense, the Arabic word *islām* means "submission" and, at a time when Arab armies were establishing their political and military control over large areas of western Asia and north Africa, the ambiguity of the word seems obvious. In a similar way, the concept of Arabisation may usefully include such things as the adoption of the Arabic script and of a substantial Arabic vocabulary by a people, such as the Persians, who nevertheless did not come to speak Arabic.

Neither process should be envisaged as a simple imposition by the conquerors on the conquered or as a mere borrowing from the rulers by their subjects. Both Islamisation and Arabisation took place as a society and culture embracing Arabs and non-Arabs, conquerors and subjects, formed, and both elements of the population were affected by them. To say that the Arabs were subject to Arabisation and Islamisation just like the non-Arab peoples over whom they ruled may seem paradoxical, but makes sense if one considers that both Islam and the forms of Arabic known to us were an outcome of the emergence of the new society and culture. As the Arabic language [see ʿARABIYYA] came to be used by non-Arab populations under Arab rule, the language evolved into different forms and dialects as it was developed and expanded for new purposes and subjected to local variations of pronunciation, vocabulary and grammar. In the same way, Islam should be understood as a religion and way of life which developed as the Arabs and non-Arabs gradually coalesced into a common society, both influencing and contributing to it.

In our Muslim literary sources the territorial expansion of Arab Muslim rule is the aspect of Islamisation and Arabisation under the Umayyads which receives the most consistent attention. In the west, following the foundation of the *miṣr* of al-Ḳayrawān [*q.v.*] in 50/670, the Berbers of the Maghrib were gradually subdued and recruited to fight alongside the Arabs. By the late 1st/early 8th century, in the caliphates of ʿAbd al-Malik and al-Walīd, Arab control of the region was secure enough for Arab and Berber armies to cross to the Iberian peninsula and begin the conquest of what was to become al-Andalus. Around the same time, major advances were made in Afghānistān and Transoxania. Al-Ḥadjdjādj was responsible for sending armies under generals such as Ibn al-Ashʿath, Ḳutayba b. Muslim and Muḥammad b. al-Ḳāsim [*q.vv.*] which laid the foundations for the subsequent development of caliphal authority and of Islam in central Asia. The caliphate of Hishām saw the strengthening of Arab Muslim control in Soghdia and Ṭukhāristān against a threat from the Turkish tribes of the Türgesh [see TURKS]. In contrast, the Umayyad attacks upon Byzantine territory to the north of Syria, involving attacks on Constantinople [see ḲUSṬANṬĪNIYYA] itself, were unsuccessful.

The entry into Islam of the non-Arab population under the rule of the Umayyads is less fully documented. In the traditional Muslim sources, it is alluded to mainly by reports about the actions of Umayyad governors and officials trying to hinder the non-Arabs from acquiring the status of *mawālī*. In Christian sources, the spread of Islam is suggested by occasional reports telling of the people of a particular town or region abandoning their faith at a particular time, by discussions concerning whether a person who had apostasised to the religion of the Arabs and wished to return to Christianity needed to be rebaptised (an abjuration ritual for such cases has been preserved, see E. Montet, in *RHR*, liii [1906] and F. Cumont, in *ibid.*, lxiv [1911]), and by appeals by Christian religious authorities for their followers to avoid too close a contact with the Arabs (e.g. Athanasius of Balad, cited in Crone and Cook, *Hagarism*, 13).

One difficulty lies in envisaging what was involved in the acceptance of Islam. Since the religion and culture of Islam was forming at the same time that it was spreading, Islamisation involves development as well as extension. The Sunnī form of Islam, with its emphasis on the *sunna* of the Prophet as a source of law and upon the religious scholars as the tradents and interpreters of the law, seems to have begun to develop in the later Umayyad period and in opposition to the actions and claims of the Umayyad caliphs [see FIḲH]. So far as one can tell from the sources, there was relatively little attention paid, at least by the earlier Umayyad caliphs and their representatives, to the Prophet as a source of authority. That the Umayyad idea of caliphal authority gave the caliph superiority over the Prophet is suggested not only by the *Khalīfat Allāh* title but by specific reports in the literary sources which have caliphal representatives stressing the superior position of a *khalīfa* over a *rasūl* (see e.g. Khālid al-Ḳasrī quoted in al-Ṭabarī, ii, 1199). Movements sometimes regarded as manifestations of Shīʿism under the Umayyads are so diverse in aims, practices and doctrines that, taken together with the fact that there is no Sunnism with which to contrast them, it is difficult to see them as having much more in common than the idea that legitimate authority belonged to the family of the Prophet rather than that of the Umayyads (W.M. Watt, *Shīʿism under the Umayyads*, in *JRAS* [1960]). It was only in ʿAbbāsid times that the Sunnī and Shīʿī traditions stabilised in the forms we consider as characteristic.

Evidence of development in the area of ritual and practice under the Umayyads is relatively sparse and susceptible of various interpretations [see e.g. ḤADJDJ; ḲIBLA; RAMAḌĀN; ṢALĀT; ṢAWM]. The same might also be said regarding matters of theology and belief, but the evidence at least suggests that debates and arguments about such questions as the status of the Muslim who has sinned [see ĪMĀN], anthropomorphism [see TASHBĪH], and human free will and divine predestination [see ḲADARIYYA] were taking place in the Umayyad period and possibly affected, at least in the forms they took, by the policies and claims of the caliphs.

Perhaps the most obviously striking feature of the Umayyad concept of Islam which is not compatible with later understanding, however, is that it was the religion of the Arabs and that entry to it involved assimilation to Arab society. For a non-Arab non-Muslim to enter Islam, it was necessary to become the client of an Arab and thereby become attached to an Arab tribe. Religious and ethnic identity were thus closely linked in a way similar to that in Judaism. The move from this concept to one which distinguished between religious adherence and ethnic identity, and made Islam a religion open to all whether Arab or not, is the most important development of the Umayyad period. It occurred beyond the control of the caliphs and has much to do with the weakening of Umayyad authority and the image which the dynasty came to acquire in Muslim tradition.

Bibliography: It is not possible to give here a complete bibliography for the whole period. The following refers especially to material published since the appearance of the article by Levi Della Vida, *Umaiyads*, in *EI*[1] (which should be consulted) and to that relating to the Umayyad period generally. For more complete lists, the reader should consult the bibliographies provided in the studies listed below.

1. Traditional Muslim literature. In addition to the well-known chronicles and other types of traditional literature produced by Muslim scholars such as al-Ṭabarī (a complete English tr. of whose *Taʾrīkh* has been published: *The History of al-Ṭabarī*, 39 vols., Albany N.Y.), al-Yaʿḳūbī, al-Dīnawarī, *et alii*, two works mentioned by Levi Della Vida have now been substantially published: various volumes of the *Ansāb al-ashrāf* of al-Balādhurī are now available (i, ed. M. Ḥamīd Allāh, Cairo 1959; iii, ed. ʿAbd al-Azīz al-Dūrī, Beirut 1978; iii, ed. M.B. al-Maḥmūdī, Beirut 1974-7; iv a, ed. M. Schloessinger, revised and annotated by M.J. Kister, Jerusalem 1971; iv a, ed. Iḥsān ʿAbbās, Wiesbaden 1979; iv b, ed. M. Schloessinger, Jerusalem 1938; v, ed. S.D. Goitein, Jerusalem 1936; vi b, ed. Kh. ʿAthāmina, Jerusalem 1993; for the section on the caliphate of al-Walīd II, see D. Derenk, *Leben und Dichtung des Omaiyadenkalifen al-Walīd ibn Yazīd*, Freiburg im Breisgau 1974; for an Italian tr. of the section on Muʿāwiya, see O. Pinto and G. Levi Della Vida, *Il Califfo Muʿāwiya I secondo il "Kitāb Ansāb al-Ašrāf"*, Rome 1938); and al-Bayyāsī, *Al-Iʿlām bi ʾl-ḥurūb al-wāḳiʿa fī ṣadr al-Islām*, ed. Sh.Dj. Aḥmad Maḥmūd, ʿAmmān (?) 1987. Other significant texts to have appeared include al-Djahshiyārī, *K. al-Wuzarāʾ wa ʾl-kuttāb*, ed. al-Saḳḳā *et alii*, Cairo 1938; Djāḥiẓ, *Risāla fī ʾl-Banī Umayya*, French tr. by Ch. Pellat, *La «Nâbita» de Djâhiẓ*, in *AIEOr. Alger*, 1952; Muṣʿab al-Zubayrī, *Nasab Ḳuraysh*, ed. E. Lévi-Provençal,

Cairo 1953; Ṣafadī, *K. Umarā' Dimashk*, ed. Ṣalāḥ al-Dīn al-Munadjdjid, Damascus 1955; W. Caskel and G. Strenziok, *Ǧamharat an-nasab. Das genealogische Werk des Hišām b. Muḥammad al-Kalbī*, 2 vols., Leiden 1966; Khalīfa b. Khayyāṭ, *Ta'rīkh*, 2 vols., ed. ʿA.Ḍ. al-ʿUmarī, Nadjaf 1967; idem, *Kitāb al-Ṭabaḳāt*, ed. ʿA.Ḍ. al-ʿUmarī, Baghdād 1967; Ibn Aʿtham al-Kūfī, *K. al-Futūḥ*, 8 vols., Ḥaydarābād 1968-75; Maḳrīzī, *al-Nizāʿ wa 'l-takhāṣum fīmā bayna Banī Umayya wa-Banī Hāshim*, English tr. by C.E. Bosworth, *Maqrīzī's "Book of contention and strife"*, Manchester 1980; Dhahabī, *Ta'rīkh al-islām*, ed. Tadmurī, Beirut 1991; M. Hinds, *An early Islamic family from Oman: al-ʿAwtabī's account of the Muhallabids*, Manchester 1991. The extensive *Ta'rīkh Madīnat Dimashk* of Ibn ʿAsākir, which contains substantial material of importance for Umayyad history, is still incompletely published, but the text of the Damascus ms. is available in a lithograph (19 vols., Dār al-Bashīr, ʿAmmān n.d.), and see Ibn Manẓūr, *Mukhtaṣar Ta'rīkh Dimashk li 'bni ʿAsākir*, Damascus 1989.

UMAYYADS. In Spain.

The Umayyads of Spain ruled in al-Andalus 138-422/756-1031, the following being a table of the rulers:

138/756	ʿAbd al-Raḥmān I b. Muʿāwiya, Abu 'l-Muṭarrif al-Dākhil
172/788	Hishām I b. ʿAbd al-Raḥmān I, Abu 'l-Walīd
180/796	al-Ḥakam I b. Hishām I, Abu 'l-ʿĀṣī
206/822	ʿAbd al-Raḥmān II b. al-Ḥakam I, Abu 'l-Muṭarrif al-Mutawassiṭ
238/852	Muḥammad I b. ʿAbd al-Raḥmān II, Abū ʿAbd Allāh
273/886	al-Mundhir b. Muḥammad I, Abu 'l-Ḥakam
275/888	ʿAbd Allāh b. Muḥammad I, Abū Muḥammad
300/912	ʿAbd al-Raḥmān III b. Muḥammad, Abu 'l-Muṭarrif al-Nāṣir
350/961	al-Ḥakam II b. ʿAbd al-Raḥmān III, Abu 'l-Muṭarrif al-Mustanṣir
366/976	Hishām II b. al-Ḥakam II, Abu 'l-Walīd al-Mu'ayyad, first reign
399/1009	Muḥammad II b. Hishām II, al-Mahdī, first reign

400/1009	Sulaymān b. al-Ḥakam, al-Mustaʿīn, first reign
400/1010	Muḥammad II, second reign
400/1010	Hishām II, second reign
403/1013	Sulaymān, second reign
407/1016	*ʿAlī Ibn Ḥammūd, al-Nāṣir, Ḥammūdid*
408/1018	ʿAbd al-Raḥmān IV b. Muḥammad, al-Murtaḍā
408/1018	*al-Ḳāsim Ibn Ḥammūd, al-Maʾmūn, Ḥammūdid*, first reign
412/1021	*Yaḥyā b. ʿAlī, al-Muʿtalī, Ḥammūdid*, first reign
413/1023	*al-Ḳāsim, Ḥammūdid*, second reign
414/1023	ʿAbd al-Raḥmān V b. Hishām, al-Mustaẓhir
414/1024	Muḥammad III b. ʿAbd al-Raḥmān, al-Mustakfī, d. 416/1025
416/1025	*Yaḥyā, Ḥammūdid*, second reign
418-22/1027-31	Hishām III b. Muḥammad, al-Muʿtadd, d. 428/1036
Mulūk al-Ṭawāʾif	

1. The establishment of the new dynasty

The governors of the Iberian peninsula, whether they were directly dependent on Damascus or whether they had assumed jurisdiction from the governor of Ifrīḳiya, enjoyed considerable autonomy because the area was so remote. The fall of the Umayyad dynasty in Syria, overthrown by the ʿAbbāsids, only served to reinforce this autonomy.

It took on the appearance of actual independence from the time of the government of Yūsuf b. ʿAbd al-Raḥmān al-Fihrī, who combined all the conditions necessary to become the founder of a dynasty in Andalusia. He was a Ḳurashī [*q.v.*], the great-grandson of the great ʿUḳba b. Nāfiʿ, the son and nephew of the conquerors of al-Andalus, whose uncle, Ḥabīb b. Abī ʿUbayda, was one of those who killed ʿAbd al-ʿAzīz, the son and successor of Mūsā b. Nuṣayr, and he was elected governor with the almost unanimous support of the Arabs of al-Andalus. But this unanimity rapidly disappeared thanks to the sectarian politics of his lieutenant al-Ṣumayl b. Ḥātim.

Another, even more far-reaching factor was added to this, the arrival on the scene of the young Umayyad, ʿAbd al-Raḥmān b. Muʿāwiya, the grandson of the caliph Hishām b. ʿAbd al-Malik: he had fled ʿAbbāsid persecution and had been wandering around the north of Africa accompanied by a faithful servant, his emancipated slave, Badr. He had tried as a fugitive to establish himself in Ifrīḳiya but the governor of that province, ʿAbd Allāh b. Ḥabīb al-Fihrī, forced him to continue his flight, fearing correctly that if he allowed him to settle in that province the same fate would overtake him as destiny had reserved for his cousin Yūsuf b. ʿAbd al-Raḥmān. Seeing that his hopes of seizing government in Ifrīḳiya were dashed ʿAbd al-Raḥmān commenced his wanderings amongst the various Berber tribes of the Maghrib, an experience which convinced him not to try to restore Umayyad government in these regions. The task of creating a "state" from nothing and of unifying the numerous Berber tribes was evidently much more laborious than that of seizing a province which was already supporting a certain political organisation. Given that Ifrīḳiya, because of the rapid and determined action of its governor, was out of the question, there was only one possible region left to satisfy the ambitions of the fugitive, and that was al-Andalus.

When Badr had crossed the Strait of Gibraltar to investigate his master's chances of success, the welcome he received from the Umayyads was enthusiastic and they themselves contacted the strongman of al-Andalus, al-Ṣumayl, to negotiate the conditions under which the Umayyads could come to the Peninsula. At the start, al-Ṣumayl was in favour of this, but he quickly realised that his presence in al-Andalus would lead sooner or later to the end of the controlled anarchy which prevailed there, and in which he was able to function perfectly. He therefore announced that he was totally opposed to the project, after which the Umayyads decided to support the faction opposed to al-Ṣumayl. This was traditionally identified as the Yemenite party, though they were almost exclusively Umayyads, who did all the work until ʿAbd al-Raḥmān b. Muʿāwiya had crossed the Strait and had become firmly established. From this time onwards, numerous people joined his cause, but previously nobody besides his close followers had been able to show clearly the position he held.

At the end of the summer of 138/755, ʿAbd al-Raḥmān landed at Almuñecar and took refuge without delay in the home of one of his followers, ʿUbayd Allāh b. ʿUthmān at Torrox, which was in a very mountainous and inaccessible region. Until then the governor Yūsuf b. ʿAbd al-Raḥmān knew nothing about the whole affair and ignored the advice of al-Ṣumayl, who had urged him to act speedily against the newcomer before he managed to gain firmer support. He decided to wait until the end of the winter, for his troops had only recently returned from one campaign and were reluctant to undertake another. This delay proved fatal for the governor, who was obliged to watch the gradually increasing forces of the Umayyad pretender, until the final foreseeable result, the overthrow of Yūsuf and of al-Ṣumayl, who came again to the region of Cordova on 10 Dhu 'l-Ḥidjdja 138/14 May 756. At first the life and also the liberty of the Fihrite were respected, but when he quickly attempted revolt he was again defeated and then at last killed.

From this time onwards the destiny of the Umayyads of al-Andalus was to be closely bound up with the town of Cordova. The revolt of Cordova, that is, of its suburb (*al-Rabaḍ*), was to be the most dangerous of those which the first three sovereigns had to oppose before they could achieve peace in the territory, but it was also to be the last. It was Cordova which much later, in the most difficult moments of the reign of ʿAbd Allāh, allowed the dynasty to survive and wait for better times. It was also Cordova that became weary of the interminable succession of transitory caliphs during the *fitna* and decided to terminate the government of the Umayyads. It is very significant that after the Cordovans had proclaimed that their city had ceased to be the capital of the Umayyad dynasty, no serious attempt was made in any other town to restore the Umayyad caliphate. The Umayyads disappeared from the scene; but out of this divorce Cordova came off worse and never again regained the political role which it had enjoyed during the first three centuries of Muslim presence in the Iberian peninsula.

It is possible to distinguish three major stages in the histroy of the Umayyads of al-Andalus. The third is obviously the *fitna* and the troubled years which followed it, from the first removal from power of Hishām II in 399/1009 until the abolition of the caliphate in 422/1031. As for the first two stages they coincided broadly with the traditional division into the period of the *amīrs* and the period of the caliphs, even though the validity of such a categorisation may be challenged inasmuch as it neither uniquely nor

principally draws attention to the adoption of the title of caliph by ʿAbd al-Raḥmān III. These two periods are at one and the same time relatively similar and yet different; they are similar because both reproduce the usual cycle of ascension, then splendour, then decadence; but they are also different because of, among other things, the localisation of the centre of interest of its governors and the problems which they confronted.

For the first Umayyads, the *amīrs*, the object of their attention was al-Andalus, and all their activity was carried out within its frontiers. Later, once their successors the caliphs had restored peace in the Peninsula at the beginning of the reign of ʿAbd al-Raḥmān III, they embarked on aggressive foreign politics which were designed to obtain control of the distant Mag̲h̲rib. This initially produced relative success but later was indirectly one of the causes of the *fitna*.

2. The Umayyad amīrate

From the accession to the throne of ʿAbd al-Raḥmān I to the death of his grandson, al-Ḥakam I in 206/822, the history of al-Andalus is reduced to a recital of the perpetual succession of revolts and uprisings which culminated in the famous day of the Suburb of Cordova. For three quarters of a century, tireless efforts were made by the three Umayyad sovereigns in the face of all sorts of opposition to ensure the total domination of the territory. To do this ʿAbd al-Raḥmān b. Muʿāwiya had to quash revolts by the partisans of Yūsuf, by some of those who had fought on his side against Yūsuf, by the Berbers, and even by partisans of the ʿAbbāsid cause, not forgetting the internal conspiracies within the Umayyad family itself. The result of all these revolts, and perhaps the cause of some of them, was that ʿAbd al-Raḥmān did not want to show preference by relying for support on one of the many parties fighting at that time for the domination of the country. He quickly formed an army made up of slaves and Berbers which freed him from his exclusive dependence on the *d̲j̲undīs*. However, it seems that he did not suppress the system of military service which the members of the different *d̲j̲undīs* had to perform in turn.

At the end of his reign in 172/788, the dynasty appeared to be firmly established and all difficulties surmounted. His opponents had been killed or conquered and no exterior threat was looming. However, the reign of al-Ḥakam I was to provide proof that all dissidents had not been stifled as had been thought, and before that the brief period of government of His̲h̲ām I produced dynastic problems which took a long time to resolve.

His̲h̲ām I [*q.v.*] was not the eldest son of ʿAbd al-Raḥmān. He was born in al-Andalus and was thirty years old when his father died, whereas his brother was more than forty. Most of the chronicles show that His̲h̲ām had been named by his father as his successor, yet the possibility cannot be dismissed that his accession to the throne may have owed much to the speed with which he came to Cordova when he heard of the death of his father. His̲h̲ām was in Mérida and his brother Sulaymān at Toledo. Whatever the reasons, it is certain that the elder son was not pleased with how events had gone. Helped by a younger brother ʿAbd Allāh, nicknamed al-Balansī (the man from Valencia), he started a revolt in Toledo, a city which had always been ready to offer asylum to anyone prepared to rebel against the might of Cordova. Toledo had already revolted once in the reign of ʿAbd al-Raḥmān I, and it was to continue to do so repeatedly, but this latest attempt by Sulaymān and ʿAbd Allāh failed and was quickly stifled. Both of them were exiled to North Africa, from where they would return on the death of their brother His̲h̲ām to contest the throne with their nephew al-Ḥakam. Sulaymān was killed, but ʿAbd Allāh established his headquarters at Valencia; he made a somewhat timid reappearance at the beginning of the reign of ʿAbd al-Raḥmān II, but died a natural death before this action could be accorded any importance.

The reign of His̲h̲ām I was relatively peaceful, marked only by minor troubles in the Upper March, problems with the Berbers of Ronda, and several unexceptional reprisal campaigns against Christians in the north. However the reign of his son and successor al-Ḥakam I [*q.v.*] was to be very different. As already stated he began his reign by opposing the aspirations of his two uncles to become involved in curbing the secessionist tendencies of the three Marches, the principal towns of which were Saragossa, Toledo and Merida. The submission of Toledo on the renowned "day of the ditch" in 181/797 is particularly famous; on that occasion a considerable number of important citizens of Toledo were executed on the initiative of the governor of the city, a *muwallad* called ʿAmrūs b. Yūsuf in the presence of the future ʿAbd al-Raḥmān II, who had arrived in the town with an army which he was leading to the frontier. This was used as a pretext for the governor to gather together on the spot all those Toledans who had had recourse to arms. The subduing of Toledo was rather more bloody than effective, and fifteen years later it had scarcely any value for that town again caused problems for Cordova. Apart from the special ferocity with which the Toledans were suppressed, it is certain that these revolts in the regions farthest away from the Umayyad capital, particularly Toledo and the Upper March, were a constant feature of the general history of al-Andalus, until ʿAbd al-Raḥmān III arrived to forestall such centrifugal tendencies; nevertheless in the future, after the fall of the Umayyad dynasty, they were to go on reappearing uncontrollably.

It has been suggested that the conflicts with the cities of the Marches were not exceptional and that it seemed to be the custom for it to fall to the *amīr* of the day to find some solution to them. It was al-Ḥakam I who was confronted with the first great crisis of the Umayyad dynasty in al-Andalus, a crisis motivated by the discontent of the Cordovan population, who formed a conspiracy to bring down the *amīr* in 189/805. The latter retaliated by executing 62 people among whom were several distinguished *fuḳahāʾ*. But this was only an early warning. Some years later a real uprising took place against al-Ḥakam, the Revolt of the Suburb (202/818), the culmination of a series of increasingly serious incidents between the population and the troops of the *amīr*. Finally all the revolts were brought to an end, though not without difficulty, and harsh punishment was meted out to the participants. Three hundred of them were executed and the entire population of the suburb was forced to leave Cordova, while that district was completely razed to the ground.

The Arab chronicles attribute popular discontent against the raising of new, severe taxes on the population as the original cause of this revolt. What is more, those taxes were to be collected by a Christian about whom very little was known but who was to play a very important role in that period. This was the *comes* Rabīʿ, who was also commander of the Palatine Guard of al-Ḥakam, which was made up of slaves. We are not sufficiently well informed to accept unreservedly

that aggravation over the taxes was the only or principal cause of discontent. It was more the case of the last straw that broke the camel's back, and the discontent had much more distant origins. Indeed, since the time of the conspiracy of 189/805 various relatively serious incidents had occurred. Popular rumour blamed the *comes* Rabīʿ as the cause of all the problems, but the *amīr* made not the slightest alteration to his policy in the wake of the Day of the Suburb, and he kept the Christian in his post to show that the serious danger which had threated his throne had in no way perturbed him. When his son and successor ʿAbd al-Raḥmān II acceded to power, apparently a few days after the death of his father in 206/822, he ordered Rabīʿ to be crucified. Apart from its practical and ethical implications this measure seems to have demonstrated his undoubtedly clear wish to be reconciled with the Cordovans and to make a final and unequivocal end to the distance which had been created between the city and the Umayyad dynasty.

The thirty years' reign of ʿAbd al-Raḥmān II [*q.v.*] embodied the first golden age for al-Andalus. A complete appeasement of the Muslim territory was not obtained, for various attempted risings were reported in the Marches, especially in the Upper March. There the family of the Banū Ḳasī [*q.v.*] made its appearance and went on to secure its seignorial rights over the region, claiming an autonomy that was sometimes recognised but sometimes also disputed by the *amīr* of Cordova. The campaigns against the Christians followed one another in an almost routine fashion. Unproductive victories alternated with failures of little significance. The only unpredictable event of the reign was the appearance of the Normans, who came to sack Seville in 229/844 by sailing up the river with a fleet of about fifty boats. The Umayyad troops were first taken by surprise, but once this had passed they arrived quickly on the scene to rout the pirates [see AL-MADJŪS]. On the whole, the reign of ʿAbd al-Raḥmān II was relatively peaceful, which allowed the sovereign to proceed with the reorganisation of his administration inspired (though probably less than is usually thought) by the ʿAbbāsid model. New magistrates were created, court protocol was regulated, procedural norms were established for the chancellery, etc., so that the developing political and economic structure could be placed in the hands of a body of civil servants whose ranks were constantly being augmented. All this seems to have produced a notable increase in state expenditure, but in contrast to the period of al-Ḥakam the increase in fiscal revenue grew proportionally, so that no financial disequilibrium ensued.

When ʿAbd al-Raḥmān II died in 238/852 there was an atmosphere of court intrigue concerning the succession. However, once his son Muḥammad had been proclaimed as successor, all opposition rapidly disappeared and for many years to come the situation in al-Andalus preserved the status quo of the previous regime. Toledo, always a rebellious city, was the only source of trouble, when a new revolt broke out a few days after the accession to the throne of the *amīr* Muḥammad. This revolt was unusual in that it went beyond the confines of the city and the rebels managed to seize Calatrava (which was very quickly recovered) and then went on to rout a Cordovan army at Andújar. The reaction of the *amīr* was swift and the following summer he overcame the Toledans at the battle of Guazalete, an important victory though one which in no way put a stop to the secessionist aspirations of the city. Ibn Marwān al-Djillīḳī made his appearance in that period in the Lower March, though more as a local leader than as a rebel. In the Upper March the Banū Ḳasī remained loyal to the *amīr* of Cordova, though sometimes only in name.

In the final years of the reign of Muḥammad, however, this panorama of relative normality was to change radically. Individuals like Ibn Marwān, who had previously been little more than bandits, became increasingly bold; they sought to take advantage of the deep dissatisfaction among the population of certain rural areas and the inability of the Umayyad army to confront these small bands successfully. They seized more and more of the outlying, rich territories.

By the time of the death of Muḥammad in 273/886 the situation was no longer a cause for alarm. At that time his son al-Mundhir was at Alhama, besieging some rebels, among whom was ʿUmar b. Ḥafṣūn [*q.v.*]. He acceded to power with the firm intention of putting an end to these revolts. His first objective was rightly Ibn Ḥafṣūn, the leader of a sizeable army who had taken possession of a vast territory. During the summer of 275/888 the rebel was besieged in his fortress at Bobastro [see BUBASHTRU, in Suppl.], having lost other strongholds, such as Iznájar and Archidona. Realising his perilous position he decided to solicit help from the *amān* of al-Mundhir. This was granted him, but at the last moment Ibn Ḥafṣūn broke the treaty, fled from the *amīr*'s camp and took refuge again at Bobastro. At that point, with the siege again in place, al-Mundhir suddenly died. When the *amīr* had begun to notice the first symptoms of his illness his brother ʿAbd Allāh had hurried from Cordova, but he found it difficult to reassemble the army in the capital amongst such trouble and disorder.

The accession to the throne of ʿAbd Allāh was the beginning of a long series of conflicts which were seriously to endanger the Umayyad dynasty. A great number of revolts broke out all over al-Andalus which the Cordovan state proved unable to cope with, to the extent that at various times the *amīr* even lost effective control of the city of Cordova. Fortunately for the authorities, most of the rebels were too preoccupied with internal questions or with conflicts with their neighbours to try hard to destroy the ruling dynasty. Only Ibn Ḥafṣūn attempted to seize Cordova, but he was promptly defeated at the battle of Poley (278/891) by an army chiefly made up of Cordovan volunteers.

Thus defeat in no way put an end to the rebellion which lasted until the beginning of the reign of al-Nāṣir, but rather allowed ʿAbd Allāh to preserve his capital city. If it had fallen this would have meant the end of the Umayyads of al-Andalus, but it would probably also have provoked the beginning of a general civil war, for Ibn Ḥafṣūn, though he had numerous partisans, at the same time elicited total rejection from other sectors of opinion. ʿAbd Allāh managed to ward off this mortal blow but his capacity for action remained very limited. He was so constrained by circumstances that all he could do was to try to manoeuvre events in the most favourable direction. In this way he sometimes arbitrated between his adversaries but sometimes he let them wear each other down in internal conflict. He conceded to the strongest a *de facto* autonomy within their territories, and he despatched his army to fight against the weakest. In short he was weak but he knew it and tried not to exceed his own limitations.

His aims were not helped by internal quarrels within his own family, which ended in the death of his sons Muḥammad and al-Muṭarrif and the assassination of some of his brothers. But despite all this, when he

died in 300/912, his grandson ʿAbd al-Raḥmān, the son of the previously assassinated Muḥammad, succeeded him, and the political situation, though far from being good, appeared to be stabilised. The greater part of al-Andalus lay outside the effective control of Cordova but everyone seemed satisfied with the state of things and relative peace reigned.

3. The Caliphate

From the time he was proclaimed caliph ʿAbd al-Raḥmān III [*q.v.*] made his intentions clear. Without waiting for the coming of spring, he sent detachments to combat the rebels in the region nearest Cordova. The most important of these contingents, under the order of his *ḥādjib* Badr, peacefully occupied the city of Ecija in the middle of winter (on 1 January 913, two and a half months after his accession to power). The measures taken after the conquest of this city were a good indication of the policy he would adopt in future for most of his conquests. Indeed, he favoured a policy of appeasement and agreed to avoid excessive retribution on a population which had surrendered to him without very much resistance. Though the walls of the town were destroyed, those of the citadel were preserved, and the Umayyad governors were installed there.

With the arrival of spring, ʿAbd al-Raḥmān personally led a campaign against the small rebel groups of the *kūras* of Jaén and Granada, many of whom were allies of Ibn Ḥafṣūn. In the months that followed, the town of Seville was recovered, and here the same policy was used as with Ecija, sc. no reprisals against the population but the destruction of the city wall. In the first year of his reign ʿAbd al-Raḥmān had succeeded in breaking the isolation of Cordova and in commencing an authentic "reconquest" destined to bring the whole of al-Andalus under the authority of the Umayyads. This was not an easy task and the difficulties entailed in this enterprise combined with other unexpected problems, like the famine which prevailed in the Peninsula in the early years, or the aggressiveness of the king of Léon, Ordoño II, who destroyed Evora in 301/913, and only just failed to do the same in Mérida two years later.

But these difficulties in no way altered the plans of the *amīr* of Cordova, whose first objective was to secure control of the south of al-Andalus. This required firmly putting an end to the insurrection of Ibn Ḥafṣūn. During the first fifteen months of his reign he concentrated all his efforts to this end, firstly by fighting against Ibn Ḥafṣūn himself and then, after the latter's death in 305/918, against his son. The fortress of Bobastro was permanently seized by the Umayyad troops in 319/928, and despite all that this revolt had represented to the Umayyad dynasty, ʿAbd al-Raḥmān granted *amān* to Ḥafṣ b. ʿUmar b. Ḥafṣūn.

During all these years the Christians had not ceased attacking the frontiers, but the reaction of Cordova was limited to two campaigns which were led in person by ʿAbd al-Raḥmān, one in Muez in 308/920, and the other in Pamplona. Furthermore on a few occasions less important expeditions were undertaken, one of which resulted in the terrible rout of the vizier Ibn Abī ʿAbda in 305/917 at Castro Muros. Once the south of the Peninsula was pacified, the Marches, which up until that time had been constantly rebelling against the power of Cordova, formed the next objective. Mérida submitted in 316/928; Badajoz surrendered to the Cordovan troops in 318/930; Toledo resisted until 320/932; and Saragossa capitulated in 326/937 (the text of the treaty is still extant).

The whole of al-Andalus was now back under the control of the Umayyad dynasty, and ʿAbd al-Raḥmān, from then on proclaimed caliph, could afford to pay less attention to internal politics and devote himself to external problems. For the first time in the history of the Umayyads of al-Andalus the main attention of the sovereign was not drawn abroad to the Christians in the north but to the neighbouring Maghrib, a region which up until then had hardly existed in the eyes of the Andalusians. Contrary to what could have been expected from the deep incursions of Ordoño II into Muslim territory at the beginning of the reign of ʿAbd al-Raḥmān II, the Christian kingdoms of the Peninsula no longer represented a serious danger, at least to the Muslim state, even though the personal position of the caliph had been affected by his resounding defeat at Alhandega in 327/939, to the point where he no longer led any more military expeditions. Despite this, neither the unfortunate battle nor the frequent victories of the caliph's armies produced any significant changes in the frontier demarcation, and the only results were booty and captives.

The danger to the Umayyad dynasty did not come from its Christian adversaries in the north, but from the Fāṭimids of Ifrīḳiya, who gradually extended their acquisition of land over the vast territory of the remotest Maghrib. This constituted a danger at least in the eyes of ʿAbd al-Raḥmān III, who saw in it not only the risks of military confrontation, but also the threat of the Shīʿī propaganda, which was probably even more dangerous than their armies. As long as the Umayyad sovereign had been occupied with the struggle against the revolt of the Banū Ḥafṣūn, his intervention in the Maghrib had been limited to supporting from a distance the petty North African kings who opposed the advance of the Fāṭimids. But once the south of the Peninsula had been pacified and was under control, ʿAbd al-Raḥmān al-Nāṣir had his hands free to put into practice different politics in respect of the southern bank of the Strait of Gibraltar. The peaceful occupation of Ceuta in 319/993 represented the beginning of the Umayyad intervention in the Maghrib, which would last until the end of the dynasty.

The capture of Ceuta should not be seen as the establishment of a bridgehead from which to launch the conquest of the Maghrib. It does not seem to have been the intention of al-Nāṣir (nor that of his successors al-Ḥakam al-Mustanṣir and Hishām al-Muʾayyad) to seize territory on the other side of the Straits. Their strategy was rather based on the establishment of a protectorate for the Berber tribes with the intention of setting up a security zone on the southern borders without any expansionist ambitions. In other words, the control that Cordova meant to exert on the Maghrib lay more in diplomacy than in military force, which is wby it seems logical to suppose that the adoption of the title of caliph by al-Nāṣir was connected with this policy.

Traditionally, the victory over the Ḥafṣūnid rebels and the proclamation of ʿAbd al-Raḥmān III as caliph are linked. However, it is certain that, if the conquest of the rebel fortress of Bobastro is to be considered an important event for the pacification of the realm, it must be seen as merely the first step on a long road towards that goal. The capture of Bobastro took place in 315/928 and the proclamation of the caliphate in 316/929. At this point the Marches were not under control, and prior to the capture of Saragossa in 326/937 it was not possible to say that al-Nāṣir was effectively in control of the whole country. Even if only

within the context of his internal policies, the adoption of the title of caliph cannot be explained satisfactorily. However, even in the struggle for power which was played out in the Maghrib at that time, recourse to the high position of caliph as an argument in the judicial and religious propaganda takes on its full significance, especially in view of the fact that the rival to be conquered, the Fāṭimid sovereign, also gave himself the title of caliph.

As a general rule, the North African policy of the Umayyads was not particularly profitable. It only served to establish unstable and fleeting allliances with Berber leaders of dubious trustworthiness who were unable to oppose any real resistance to the Fāṭimids. Al-Andalus was sheltered, but the attention of the Fāṭimid Mahdī was directed more to the east than to the Maghrib, and even less towards al-Andalus. In fact the threat to the Umayyad dynasty was not imminent. However, the human resources employed to serve the North African policy, while not negligible, were never enormous, and it was only at the end of the government of the *ḥādjib* al-Manṣūr, in the reign of Hishām III, that Umayyad troops intervened in an active and direct manner. They even managed to seize Fez during a campaign directed by the son of the dictator ʿAbd al-Malik. But it appears that the economic cost of this policy was considerable, and the successes appeared frequently to be more costly than the defeats. Support for tribal chiefs had to be generously paid for, adherents had to be bought and help had to be recompensed. Moreover, the Umayyad army permanently billeted in Ceuta also represented an important expense for the state coffers.

The North African adventure was in the end one of the factors that contributed the most to the brutal fall of the Umayyad dynasty. Not only by the fact of the economic extortion which the pursuit of this policy exacted but also because Cordova began to be inhabited by an endless stream of Berber mercenaries who were numerous and influential and who formed a foreign element in Cordovan society. They were to play a decisive role in triggering the *fitna* which put an end to the Umayyad state.

The reign of the successor to al-Nāṣir, al-Ḥakam II al-Mustanṣir (350-66/961-76), was undoubtedly the period of greatest splendour in all aspects of Andalusian history. That part of the volume of the *Muḳtabis* which has been preserved and which is devoted to it is a minutely detailed chronicle of the activity of a court which was apparently happy and absolutely free of any problems. In its pages, the Christians in the north appear merely as humble vassals who came to the capital to present their homage to the sovereign, or even to ask him to intervene as arbiter in their internal quarrels. But constantly interspersed between these accounts are to be found accounts of the war in Africa, which in that period took the form of harsh confrontation with the Idrīsid al-Ḥasan b. Gannūn. Attention is drawn by the repeated mention of the sending of troops and especially of money.

There is also a very significant paragraph in a letter from the caliph himself to his general Ghālib, who led the Andalusian troops in the Maghrib: "Do not worry about the money or the troops as both will arrive at regular periods [. . .]. Even if it meant emptying the coffers full of treasure and the brimming granaries of al-Andalus the caliph would send you all they contained" (see the translation of García Gómez, *Anales Palatinos*, 165). The detailed statements which Ibn Ḥayyān made of these constant despatches of significant sums of money demonstrate that the words of the caliph were not pure rhetoric, but that they reflected his firm resolve to maintain at any price his influence on the Maghrib. It is not easy to assess precisely how much influence the financial cost of the North African policy had on the fall of the dynasty. It is, however, beyond question that this policy had another consequence, evidently related to the triggering of the *fitna*: the incorporation of important contingents of Berber troops into the Cordovan army. The same Ibn Ḥayyān, who probably wrote this very volume of the *Muḳtabis* in the middle of the *fitna*, explained in a well-known passage how the process began:

> ʿAbd al-Raḥmān al-Nāṣir had always been opposed to the recruitment of Berbers into the army; there was only a reduced number of soldiers of Berber origin called the "men of Tangiers" and they occupied the lowest position in the hierarchy. In the beginning al-Ḥakām al-Mustanṣir took the same line, not hesitating at public demonstrations to pour scorn on anything relating to the Berbers. But at a certain point his opinion changed radically and he became their most ardent supporter, and then he set about incorporating them into his army in considerable numbers. When Ibn Abī ʿĀmir came to power this tendency was increased to take account of the desire of the most powerful *ḥādjib* to have at his disposal a personal army which would raise no obstacle to his desire to marginalise completely the caliph Hishām al-Muʾayyad (see the translation of García Gómez, *Al-Ḥakam III y los beréberes*, in *al-Andalus* [1948], 209-26).

It is certain that from the time of ʿAbd al-Raḥmān I the Umayyads used mercenaries in their armies as much to limit the power of the groups that made up the *djund* as to have a reliable personal guard. These mercenaries were mainly slaves, whether freed or not, prisoners of war and Berbers, but there were always in the ranks other individuals of very diverse origin, without any sort of internal cohesion and totally private links. The new power of recruitment of al-Ḥakam corresponded to a total break with the previous régime, because from that time onwards these people whom he incorporated into his army were no longer isolated individuals but family groups or complete clans, endowed to a very great extent with internal solidarity and whose allegiance to those who paid them was always less than their allegiance to their *ḳawm*. On the one hand the Berbers of the Cordovan army were very united among themselves, but on the other hand the relationship with the Cordovan population was at best cold and often strained. It is therefore not surprising that opposition between Andalusians and Berbers finally broke out. It was the first act, and the most important act, of the *fitna*, which in a very few years put an end to the Umayyad dynasty and to the Cordovan state. But before this terrible end, there were years when Cordova continued to exist and in which the military power of the state appeared to be indestructible.

On the death of al-Ḥakam al-Mustanṣir in 336/976, his only surviving son Hishām II al-Muʾayyad [*q.v.*] acceded to the throne. He was then a child of eleven years. The logical consequence to this situation, where the sovereign was a minor, was a series of numerous intrigues in court, in which some tried to replace the caliph with another member of the Umayyad family more fit for government, and others tried to seize the government for themselves. The final victor of all these intrigues was Muḥammad b. Abī ʿĀmir, a person who had held ever more important posts in the administration since the reign of al-Ḥakam, until he

obtained the post of *ḥādjib* with absolute power and he could adopt the title of al-Manṣūr [*q.v.*].

The most outstanding and specific characteristic of the government of al-Manṣūr was the tireless military activity against the Christian kingdoms. He personally led more than fifty campaigns, during which he penetrated deeply into enemy territory, reaching cities as far away as Santiago de Compostela, Astorga, León, Pamplona and Barcelona. However, just as during the whole history of the Umayyad dynasty in al-Andalus, these resounding victories did not result in any territorial gain for Hispanic Islam. The objectives of these campaigns were to weaken the enemy and especially to obtain booty and captives, perhaps in a desperate attempt to compensate for the enormous expense to the public treasury occasioned by the intervention in North Africa.

On the death of Ibn Abī ʿĀmir in 392/1002, the Umayyad state seemed to be on solid foundations. Within its frontiers there was total peace. The Christians were terrorised and humiliated. In the Maghrib the situation was also quite good. During the six years of his government the successor to Ibn Abī ʿĀmir, his son ʿAbd al-Malik [see AL-MUẒAFFAR], followed his father's policy without any significant changes, but his premature death in 399/1008 marked the beginning of the ruin of the Umayyad state.

4. The *fitna* and the demise of the dynasty

After his death it was his brother ʿAbd al-Raḥmān, known as Sanchuelo, who replaced ʿAbd al-Malik al-Muẓaffar in the office of *ḥādjib*. His qualities as governor were shown to be very much inferior to those of his father and brother. During the six months of his mandate he managed to squander the political heritage which he had received from his predecessors and to lead al-Andalus to the brink of civil war. His conduct was not only despotic and iniquitous but he also forced Hishām II to appoint him as heir to the caliph, an action which finally earned for him the hatred of all sections of Cordovan society. While he was on campaign against Christian territory, the population of the capital rose up against him, under the orders of one of the numerous Umayyad descendants of ʿAbd al-Raḥmān II, Muḥammad b. ʿAbd al-Djabbār, and this last was to make his appearance on the scene during these years of trouble, taking the title of Mahdī. Revolts overwhelmed the city without any opposition, and ʿAbd al-Raḥmān b. Abī ʿĀmir was arrested and executed when he tried to return to Cordova, having been abandoned by the Berber troops who had been his last support.

Muḥammad al-Mahdī secured the abdication of Hishām II and remained sole caliph; but immediately he became the target of a conspiracy provoked by an unfortunate policy which engendered hostility towards him from, among others, the Berbers. They decided to put an end to the reign of al-Mahdī and to look for a candidate in the Umayyad family. The man chosen was another great-grandson of al-Nāṣir, Sulaymān b. al-Ḥakam al-Mustaʿīn, who seized Cordova in Rabīʿ I 400/November 1009. From then until the leaders of Cordova decided to finish with the caliphate at the end of 422/1031, there was an interminable series of political changes. Those involved were firstly the three caliphs of the *fitna*: Hishām II, al-Mahdī and al-Mustaʿīn; then the members of the family who was descended from the Idrīsids, the Banū Ḥammūd; and then, finally, some other Umayyads like al-Mustaẓhir, al-Mustakfī and al-Muʿtadd.

During these years the most notable event was the bloody sacking of Cordova by the Berber troops of al-Mustaʿīn in Shawwāl 403/May 1013. In addition to this terrible blow to the city the incessant conspiracies, revolts and uprisings which took place at that time led the Cordovan leader to decide to abolish the caliphate. All this reinforced the belief that every effort to restore the Umayyad state was doomed to failure. For many years all the struggles for the throne of Cordova did not get beyond the level of internal quarrels in the city, for the rest of Andalusia had taken an independent path. Once again, the tendency towards disintegration which had marked the entire history of Andalusia, though it seemed to have been surmounted during the reign of ʿAbd al-Raḥmān al-Nāṣir, triumphed, this time permanently.

Bibliography: 1. Sources. The basic, almost unique text for information on the Umayyad period in al-Andalus is the work of Ibn Ḥayyān, brought together under two titles, *al-Muḳtabis*, a compilation of all the earlier history, and *al-Matīn*, a chronicle of events personally witnessed by the author. Unfortunately, the greater part of this historian's work has not been preserved. We only have fragments of four of the volumes of the *Muḳtabis*, sc. those on the reigns of ʿAbd al-Raḥmān II to Muḥammad I (ed. Makkī, Beirut 1973), ʿAbd Allāh (ed. al-ʿArabī, Casablanca 1990), ʿAbd al-Raḥmān III (ed. Chalmeta, Corriente and Subh, Madrid 1979) and al-Ḥakam II (ed. al-Ḥadjdjī, Beirut 1965). As for the *Matīn*, nothing remains except for numerous, lengthy citations in other authors, above all Ibn Bassām in his *Dhakhīra* (ed. ʿAbbās, Beirut 1979). In reality, we can aver that almost all we know of the chronicles on the history of the Umayyads in al-Andalus comes from Ibn Ḥayyān, because he gathered together everything which had been previously written and because he served as a direct or indirect source for most subsequent works.

2. Studies. All the general studies on al-Andalus devote particular attention to this period, such as Lévi-Provençal's *Hist. Esp. mus.*, which remains the most detailed one, but which should be completed with the help of more recently-edited texts, and the work of M.ʿA.A. ʿInān, *Dawlat al-Islām fi 'l-Andalus*, i-ii, Cairo 1969; R. Arié, *España musulmana* (*siglos VIII-XV*) = vol. iii of the *Historia*, ed. Tuñon de Lara, Barcelona 1982; and J. Vallvé, *El califato di Cordóba*, Madrid 1992. On the Umayyad family, see Ṣ.D. al-Munadjdjid, *Muʿdjam Banī Umayya*, Beirut 1970; E. Terés, *Dos familias marwâníes en al-Andalus*, in *al-And.*, xxxv (1979), 93-117; and A. Urquica, *La familia umaya en al-Andalus*, in *Estudios onomástico-biográficos de al-Andalus*, v (1992), 373-432. For the question of the caliphate, see M. Fierro, *Sobre la adopción del titulo califal por ʿAbd al-Raḥmān III*, in *Sharq al-Andalus*, vi (1989), 33-42; and D.J. Wasserstein, *The caliphate in the West. An Islamic political institution in the Iberian Peninsula*, Oxford 1993, see also two reviews of this last work, by E. Manzano, in *BSOAS*, lix (1996), 143-4, and L. Molina, in *Al-Qanṭara*, forthcoming. For chronology and genealogy, see Bosworth, *The New Islamic dynasties*, Edinburgh 1996, 11-13 no. 4.

(L. MOLINA)

UMM AL-ḲAYWAYN, a shaykhdom of the Gulf, named after its coastal capital situated between ʿAdjmān (23 km) [*q.v.* in Suppl.] and Ra's al-Khayma (42 km) [*q.v.*], and since 1971 one of the seven United Arab Emirates (UAE). Its territory extends some 30 km

along the coast and stretches some 50 km inland (south-east). Some 45 km inland lies the oasis of Falād̲j̲ al-Muʿallā, the emirate's most fertile area. The emirate's surface of 777 km² (1% of the UAE total) makes it larger only than ʿAd̲j̲mān. In population (3,700 in 1968; 29,299 in 1985 census, or 1.8% of the UAE's population), wealth and political weight, Umm al-Ḳaywayn is the smallest of the seven s̲h̲ayk̲h̲doms. It also remains the least developed and most traditional. Fishing is the traditional industry (the town was an important boat-building centre in the early 20th century), along with some pearling, date growing and light industry. Since the 1980s, cement production and related activities have become the dominant sector of the economy. The first oil well was drilled in 1981, but the emirate's only hydrocarbon resources in 1997 remained its 10% share (representing 3,000 b/d in 1975, but down to less than 1,000 b/d by 1995) in the Mubārak field off Abū Mūsā island. With a Gross Domestic Product since the 1970s on average only 0.5% of the UAE's total, the emirate's expenditure is in large part covered by Abū Ẓaby/Abū Ẓabī [*q.v.*].

A majority of the population belongs to the Āl ʿAlī tribe (also found elsewhere); the tribe's and the emirate's ruling family is the Āl Muʿallā, which saw its status recognised by Britain in 1820, after al-S̲h̲āriḳa [*q.v.*] failed to impose its control. S̲h̲ayk̲h̲ Rās̲h̲id b. Aḥmad Āl Muʿallā has ruled since the death in 1981 of his father, S̲h̲ayk̲h̲ Aḥmad b. Rās̲h̲id Āl Muʿallā, who had been Amīr since 1929. Along with the other s̲h̲ayk̲h̲doms, Umm al-Ḳaywayn became a signatory to the 1820 General Treaty of Peace with Britain, followed by the Perpetual Truce in 1853, and the Exclusive Agreements in 1892—the latter, in fact, at least partly inspired by reports that French representatives had obtained a site in the s̲h̲ayk̲h̲dom.

Anthony, *Arab states of the Lower Gulf*, Washington 1975; R. Said Zahlan, *The origins of the United Arab Emirates*, London 1978; F. Heard-Bey, *From Trucial States to United Arab Emirates*, ²London 1996.

(G. NONNEMAN)

UMM K̲H̲ALĪL [see S̲H̲AD̲J̲AR AL-DURR].

UMM AL-KITĀB (A.), an expression which means literally "the mother of the book". It appears three times in the Ḳurʾān (III, 7; XIII, 39; XLIII, 4), but has no equivalent in the earlier Semitic languages.

1. In general usage

It appears in about forty *ḥadīt̲h̲s*, but it should be noted that, there also, the expression retains an enigmatic character. This explains why all authors (*mufassirūn*, philologists, mystics, etc.) generally interpreted it in a number of different ways. It most often denotes the heavenly prototype (*aṣl*) of the Ḳurʾān, and is identified as "The Well-Guarded Tablet" (*al-lawḥ al-maḥfūẓ* [*q.v.*]), on which the future fate of all creatures is consigned. This interpretation, which is corroborated by several *ḥadīt̲h̲s*, is expressed especially well in sūra XIII, 39: "God effaces or confirms what He wishes: The *Umm al-Kitāb* is with Him" (cf. e.g. al-Ṭabarī, *D̲j̲āmiʿ al-bayān fī tafsīr al-Ḳurʾān*, Beirut n.d., xiii, 171; al-Ḳurṭubī, *al-D̲j̲āmiʿ li-aḥkām al-Ḳurʾān*, Cairo 1967, ix, 331-3; al-Nasafī, *Madārik al-tanzīl*, Beirut n.d., ii, 252; see also L. Massignon, *La passion de Hallāj*, 2nd ed. Paris 1975, iii, 133). In an extension of this meaning, certain authors, particularly the mystics, define the *Umm al-Kitāb* as the first intellect (*al-ʿaḳl al-awwal*) or the supreme Pen (*al-ḳalam al-aʿlā*) which writes down the destinies on the tablet (Ibn al-ʿArabī, *Mirʾāt al-ʿārifīn*, ms. cited by S. al-Ḥakīm, *al-Muʿd̲j̲am al-ṣūfī*, Beirut 1981, 122; al-Ḳās̲h̲ānī, *Iṣṭilāḥāt al-ṣūfiyya*, Cairo 1981, 32; al-D̲j̲urd̲j̲ānī, *Taʿrīfāt*, Beirut 1991, 50). In this respect, the *Umm al-Kitāb* corresponds equally well to "pre-existent divine knowledge" (*al-ʿilm al-azalī*; cf. al-Alūsī, *Rūḥ al-maʿānī fī tafsīr al-Ḳurʾān al-ʿaẓīm wa 'l-sabʿ al-mat̲h̲ānī*, Beirut 1398/1979, xiii, 64).

In a parallel course, Muslim authors emphasise an etymology of the word *Umm* to denote "that which puts together and synthesises" (the terms *d̲j̲āmiʿ* and *d̲j̲umla/id̲j̲māl* are used alternatively). In conformity with the Islamic tradition, which claims to recapitulate previous messages, they therefore see in the *Umm al-Kitāb* not only the celestial "matrix" of the Ḳurʾān but also of all the revealed books (Ibn al-ʿArabī, *al-Futūḥāt al-makkiyya*, Cairo 1329/1911, ii, 134-5; Ibn Kat̲h̲īr, *Muk̲h̲taṣar tafsīr Ibn Kat̲h̲īr*, Beirut 1981, i, 264; al-Alūsī, *op. cit.*, xiii, 64). Al-Zamak̲h̲s̲h̲arī even implies that it constitutes "the basic principle of all writing" (*aṣl kull kitāb*); cf. *al-Kas̲h̲s̲h̲āf*, Beirut 1995, ii, 513.

Adopting a similar semantic orientation, certain authors attribute a more tangible definition to the expression *Umm al-Kitāb*, and this most often breaks away from the Prophetic tradition. The subject in question is the *Fātiḥa*, the preliminary sūra of the Ḳurʾān, which contains the entirety of the Book (cf. e.g. al-Rāzī, *Mafātīḥ al-g̲h̲ayb*, Cairo 1308/1890-1, i, 173-5; Ibn Manẓūr, *LʿA*, Beirut 1988, i, 218; T. Nöldeke, *Geschichte des Qorāns*, Leipzig 1909-38, repr. Hildesheim-New York 1970, i, 110), Ibn al-ʿArabī teaches that all the revealed books are absorbed in the *Fātiḥa* (*Futūḥāt*, ii, 134). Elsewhere he goes as far as identifying the *Umm al-Kitāb* as "the point under the *bāʾ*" (ب) of the *basmala* (cf. *Mirʾāt al-ʿārifīn*, cited by S. al-Ḥakīm, *op. cit.*, 123). To the Ṣūfīs, this point symbolises the first determination of the Universal Manifestation, and therefore the essence of all writing.

Bibliography: Given in the article.

(E. GEOFFROY)

2. Amongst the S̲h̲īʿa

Different S̲h̲īʿī communities, including the It̲h̲nā ʿas̲h̲ariyya and the Ismāʿīliyya, like other Muslims, have acknowledged and used *Umm al-Kitāb* in its Ḳurʾānic senses. However, *Umm al-Kitāb* is also the title of an enigmatic S̲h̲īʿī book associated with the early S̲h̲īʿī *g̲h̲ulāt* of southern ʿIrāḳ. Originally produced in Arabic, only a later enlarged version of this *Umm al-Kitāb*, written in archaic Persian, has been preserved by the Central Asian Nizārī Ismāʿīlī communities of the mountainous regions of the Pamirs, Karakorum, and Hindū Kus̲h̲, in present-day Tād̲j̲ikistān, Afg̲h̲ānistān, and northern areas of Pākistān.

In its extant Persian version, the *Umm al-Kitāb* contains the discourses of the *imām* Muḥammad al-Bāḳir on the secrets of cosmology, eschatology and soteriology, in response to questions posed by an anachronistic circle of disciples, including D̲j̲ābir b. ʿAbd Allāh al-Anṣārī. Reminiscent of certain apocryphal Gospels relating to Jesus, the *imām* al-Bāḳir appears here in the guise of a five-year-old child. The *Umm al-Kitāb* is a syncretic gnostic work reflecting the influences of the early S̲h̲īʿī *g̲h̲ulāt* as well as diverse non-Islamic traditions, such as Valentinian Gnosticism and Manichaeism.

The authorship and the precise date of composition of the *Umm al-Kitāb* remain unknown. By analysing its terminology and its cosmogonic doctrine as expressed in the form of a gnostic myth, however, recent scholarship has attributed the origins of the *Umm al-Kitāb* to certain Kūfan-based S̲h̲īʿī *g̲h̲ulāt* circles of the second half of the 2nd/8th century which, like

the Khaṭṭābiyya, emerged on the fringes of the Imāmiyya and gave rise to the extremist tradition designated by the heresiographers as the Mukhammisa [*q.v.*] or Pentadists. The Mukhammisa generally espoused the divinity of the five members of the *ahl al-kisā'*, namely, the Prophet Muḥammad, ʿAlī, Fāṭima, al-Ḥasan and al-Ḥusayn, which is also a recurrent theme of the *Umm al-Kitāb*. In addition to its pentadist doctrines, the attribution of the *Umm al-Kitāb* to the Mukhammisa tradition of the Shīʿī *ghulāt* is supported by other doctrinal features of this text, such as its propagation of metempsychosis (*tanāsukh* [*q.v.*]), its gnostic-cabbalistic elements, and the important roles it assigns to Salmān al-Fārisī and Abu 'l-Khaṭṭāb. In fact, Salmān, whose gnostic name here is al-Salsal, and Abu 'l-Khaṭṭāb are mentioned jointly and frequently in a sacred formula throughout the text, which also states that the Ismāʿīlī religion (*madhhab*) was founded by the disciples of Abu 'l-Khaṭṭāb. It is interesting to note that the early Imāmī heresiographer Saʿd b. ʿAbd Allāh al-Ḳummī (*K. al-Maḳālāt wa 'l-firaḳ*, ed. M.Dj. Mashkūr, Tehran 1963, 56-60) identifies the Khaṭṭābiyya with the Mukhammisa. At any rate, the doctrines of the Mukhammisa, especially regarding creation, as reflected in the *Umm al-Kitāb* are quite distinct from those of the early Ismāʿīlīs, who also had fundamental doctrinal differences with the early Khaṭṭābiyya.

By the earlier decades of the 6th/12th century, the original *Umm al-Kitāb* had been translated into Persian in an expanded version; and this final redaction of the text eventually found its way into the literature of the Ismāʿīlīs of Badakhshān and other regions of the upper Oxus, who now adhered to the Nizārī branch of Ismāʿīlism. Henceforth, the Central Asian Ismāʿīlīs claimed this book as their own, even though it did not contain any known Ismāʿīlī doctrines. Since the opening decade of the 20th century, manuscripts of the *Umm al-Kitāb* have been recovered from Shughnān, Rūshān, Wakhān, Chitral, Hunza and other areas of Central Asia; four copies are currently found in the manuscript collections of the Institute of Ismaili Studies in London.

Bibliography: The Persian text of the *Umm al-Kitāb* was edited by W. Ivanow, in *Isl.*, xxiii (1936), 1-132, Italian tr. P. Filippani-Ronconi, *Ummu 'l-Kitāb*, Naples 1966. (F. Daftary)

UMM KULTHŪM, daughter of the Prophet Muḥammad and his first wife Khadīdja [*q.v.*]. Little is known of her and much of this is similar to traditions about her sister Ruḳayya [*q.v.*]. Umm Kulthūm is said to have married a son of Abū Lahab [*q.v.*] but to have been divorced by him by his father's orders before the marriage was consummated. Her brother-in-law ʿUthmān (later the third caliph) married her after Ruḳayya's death during the Badr campaign. She died in Shaʿbān of the year 9 without having borne a son with him.

Classical Muslim scholars connected Umm Kulthūm to traditions about multiple marriage ties between the Prophet and ʿUthmān (with political-religious ramifications) and related details about garments she wore and about her burial that appear to be precedents for later custom. Some expressed doubts about her place among Muḥammad's daughters and discussed the discrepancy between her alleged age at different events in her life and the dates reported. An isolated tradition adds a miraculous dimension to her marriage to ʿUthmān and another links her to a Ḳur'ānic passage.

In a hypercritical study, Lammens implied that Umm Kulthūm's existence as an historical person was doubtful. The modern Egyptian scholar Bint al-Shāṭi', on the other hand, fills out the minimal details of Umm Kulthūm's life with other information about the Prophet's family from classical sources to sketch a sensitive, human portrait. A popular Arabic series on Muḥammad's family, however, couples Umm Kulthūm with Ruḳayya, reflecting the paucity of information and relative unimportance of the two.

(Fr. Buhl-[Ruth Roded])

UMM KULTHŪM (1904?-1975), the most famous Egyptian singer of her time.

Born to a poor village family, Umm Kulthūm attended Ḳur'ān school (*kuttāb* [*q.v.*]) and learned religious songs (*al-inshād al-dīnī*, *al-ḳiṣṣa al-nabawiyya al-sharīfa* [see NASHĪD]) from her father, the village *imām* and a singer for weddings. He took her with him, dressed as a boy, to perform at weddings and other special occasions. The family toured the eastern Delta of Egypt until about 1923, when they moved into the lucrative world of commercial music in Cairo. By 1928, Umm Kulthūm was established at the top of the ranks of performers in the city. Her artistic authority as a gifted, well-schooled and experienced singer developed in the 1930s and 1940s when she was at the height of her vocal power. Throughout her career, she made extensive use of the mass media; she appeared in six films, made 300 recordings and broadcast monthly concerts "live" that became primary social occasions throughout the Arabic-speaking world. She cultivated a public persona of great dignity and cast herself as a "real" Egyptian, untainted by the foreign.

A wildly popular singer, she also became a cultural leader. After the Egyptian Revolution in 1952, she supported the initiatives of the new régime under President Djamāl ʿAbd al-Nāṣir. Following the defeat in the 1967 war with Israel, she toured the Arab world, donating the proceeds of her concerts to the Egyptian government. These trips resembled state visits.

Umm Kulthūm was known throughout her life for her powerful voice, her clear diction and her ability to use melody and improvisation to bring out the

meaning and mood of a poem. These skills, believed to be rooted in religious recitation and song, were honed by the composers Abu 'l-ʿIlā Muḥammad, Dāwūd Ḥusnī and Muḥammad al-Ḳasabdjī. At the height of her career, she sang religious *ḳaṣā'id* [see ḲAṢĪDA] by such poets as Aḥmad Shawḳī [*q.v.*] set to music by Riyāḍ al-Sunbāṭī, alongside clever *zadjals* by Bayram al-Tūnisī composed by Zakariyyā' Aḥmad. In 1964, she began a very famous collaboration with Muḥammad ʿAbd al-Wahhāb and sang "modern" songs—lengthy love songs with simple lyrics—which were popular with the younger generation.

Jahrhunderts*, Frankfurt am Main 1994; R. al-Ḥifnī, *Umm Kulthūm: muʿdjizat al-ghinā' al-ʿarabī*, Cairo 1994; V. Danielson, *"The Voice of Egypt": Umm Kulthum, Arabic song and Egyptian society in the 20th century*, Chicago 1997.

(VIRGINIA DANIELSON)

UMM AL-ḲURĀ (A.), lit. "the mother of settlements/villages/towns", a Ḳur'ānic expression. It occurs as such in VI, 92 and XLII, 5/7, in which the Prophet Muḥammad is commanded to warn the people of the *umm al-ḳurā* [of God's punishment for disobedience], whilst in XXVIII, 59, it is said that God did not destroy the *ḳurā* until He had sent to them a messenger (*rasūl*) reciting God's miraculous signs. Although taken by the commentators to mean the town of Mecca, an interpretation followed in the art. ḲARYA (and used as such at the present day, *Umm al-Ḳurā* being the title of an official weekly newspaper published at Mecca after the Suʿūdī conquest of the Ḥidjāz, see DJARĪDA. I. A, at Vol. II, 468b, and there being now the Umm al-Ḳurā University in Mecca), Richard Bell pointed out that the idea of a cluster of settlements or hamlets fits much better the topography of the Medinan oasis in Muḥammad's day, since this comprised scattered agricultural settlements with fortified towers [see AL-MADĪNA. (i). 1], whereas Mecca was from early times a nucleated town within a hollow surrounded by hills [see MAKKA. 1]; moreover, all three of these passages are Medinan. See Bell, *The Qur'ān translated*, Edinburgh 1937-9, i, 124 n. 3, ii, 484 n. 3; idem, *A commentary on the Qur'ān*, ed. C.E. Bosworth and M.E.J. Richardson, Manchester 1991, i, 198, ii, 224.

For the Hebrew and Syriac cognates of the Arabic word *ḳarya*, pl. *ḳurā*, see ḲARYA, to the references in whose *Bibl.* should be added A. Jeffery, *The foreign vocabulary of the Qur'ān*, Baroda 1938, 236 (it is, in fact, uncertain whether *ḳarya* is a loan word from e.g. Syriac, or whether the Syriac pl. form *ḳuryā* of the sing. *ḳrītha* is a loan word from Arabic, or whether the words are cognates).

Bibliography: Given in the article.

(C.E. BOSWORTH)

UMM AL-RAṢĀṢ, the present Arabic name for a late Roman fortress of Jordan, inhabited into early Islamic times. It is situated 27 km/17 miles south-south-east of Mādaba at a point equidistant between the "old" and "new" roads running from ʿAmmān to the south of Jordan.

As Kastron Mefaa, it was built at the end of the 3rd or opening of the 4th century A.D. It has the form of a large quadriliteral 158 m × 139 m/578 feet × 456 feet surrounded by a solid wall with quadrangular bastions. Eusebius of Caesarea states that, in the 4th century, it had a Roman garrison, more precisely, a squadron of locally-recruited cavalry, according to the *Notitia dignitatum*. The area within the Roman walls became gradually filled with buildings, so that there remain only very narrow allies between houses grouped round interior courts. Four churches were built within the walls and a dozen (most of them excavated by P. Michele Piccirillo) in an exterior quarter to the north of the fortification. The mosaics from one of these, St. Stephen, confirm that churches were being rearranged and remodelled at least into the 8th century A.D., but the site was abandoned in ʿAbbāsid times.

(J. BUJARD)

UMM SALAMA HIND BT. ABĪ UMAYYA B. Mughīra, one of Muḥammad's wives. She was of the Makhzūm clan of the noble tribe of Ḳuraysh [*q.v.*], most of whom were bitter enemies of the Prophet. She accompanied her first husband, Abū Salama ʿAbd Allāh b. ʿAbd al-Asad, on both emigrations of Muslims to Abyssinia. She was one of the first, if not the first, Muslim woman to join her husband in Medina, after her kin forcibly separated her from him and his family took her child away. In all, she had three sons and a daughter by Abū Salama.

After the death of her husband from wounds received at the battle of Uḥud [*q.v.*], she married the Prophet in 4/626. Numerous traditions linked to this event relate how the widow is consoled by God's providing her with another, even a superior, husband. Some sources report that she offered herself in marriage to Muḥammad, while others have the Prophet proposing. Many note that she initially refused to marry the Prophet because of her jealous nature, her orphan children, her advanced age and the absence of her family. Muḥammad refused to consummate the union until she stopped nursing her daughter, setting a precedent against sexual relations with a nursing mother.

Umm Salama was second only to ʿĀ'isha [*q.v.*] among the female sources of *ḥadīth*; she transmitted over 300, a handful of which are from her alone. Classical Muslim scholars counted her among the legists (*fuḳahā'*) of the female Companions, a woman of intelligence and sound judgement. She was the last of the Prophet's wives to die, in 59/679, 60/680 or after the massacre of Karbalā' [*q.v.*], according to various authorities.

UMM AL-SAMĪM, an extensive, low-lying area of quicksands and salt-flats (*sabkha* [*q.v.*]) in the interior of ʿUmān and on the fringes of the "Empty Quarter" [see AL-RUBʿ AL-KHĀLĪ], centred on lat. 21° 50' N. and long. 56° E. It spans the undefined border beween the Sultanate of Oman and the easternmost part of Saudi Arabia. To the north and east of Umm al-Samīm lie the territories of the mainly Ibāḍī Ghāfirī tribe of al-Durūʿ or al-Dirʿī and the Sunnī tribe of ʿIfār [*q.vv.*].

Bibliography: See those to AL-DURŪʿ, AL-ʿIFĀR and AL-RUBʿ AL-KHĀLĪ. (ED.)

UMM AL-WALAD (A.), denotes in classical Islamic law a slave-girl who has borne her master a child.

1. The pre-Islamic period

The master's right to take his slave-girls as concubines was recognised by Muḥammad in continuation of a general practice of Arab paganism. In regard to the position of the children of such unions, a change of view had been perceptible among the Arabs in the period just before the coming of Islam. In place of the previous unrestrictedness in marriage and concubinage, a certain decree of regulation had grown up, and a higher value began to be attached to marriage with free women and to good birth on the mother's side also; corresponding to this, however, the position of the children of slaves became worse; they were as a rule called only after their mother and not after their father, and only received their freedom when expressly recognised by their father (this condition probably always held) and even then were not fully privileged; the slave-girl, it was argued, must not give birth to her future master, as the son would reveal the qualities of a slave like his mother. The position of such a slave was not at all a privileged one. Even her designation *umm al-walad* ("mother of children") is in contrast to *umm al-banīn* ("mother of sons") as the name for a free woman. Although the personal position of a woman taken in war was hardly different from that of a slave, we frequently find a marriage in this case instead of concubinage, and her sons were considered free men, although they were as a rule only called after their mother and not regarded as having full privileges; an endeavour was often made to remove even this stain due to the irregularity of the union by a new regular marriage.

2. Under Islam

This state of affairs was continued under Islam without any essential change at first. The Ḳurʾān permits concubinage with a man's own slaves in several passages dealing with the limits of lawful sexual intercourse as against *zinā* (IV, 3, 28-9; XXIII, 6; LXX, 30, all Medinan; see the references in Nöldeke-Schwally, *Gesch. d. Qorāns*, i); the passage specially addressed to the Prophet (XXXIII, 49-51) expressly describes them as prisoners of war. In Islam therefore there was no distinction in theory between the slave-girl and the concubine taken in war, which is not surprising after the above remarks; in practice, the old procedure towards a woman taken in war remained in operation (cf. e.g. Wellhausen, *Vakidi*, 178; idem, in *NGW Gött.* [1893], 436; although not always historical in the particular case, yet typical). In the Ḳurʾān, the position of the *umm al-walad* is not defined and it is certain that the Prophet issued no decree altering her position or that of her children. That he is said to have set free the slave-girl Māriya when she had borne him his son Ibrāhīm (cf. Ibn Saʿd, viii, 155 l. 18, also 156 l. 4) should not in any case be taken as a general rule; this episode is not at all prominent in the material of tradition relating to the *umm al-walad*. The story that the Prophet recognised Māriya's son only after serious consideration (*ibid.*, 154 l. 25) might be possible as regards substance but is incredible in the form in which it is given.

That an *umm al-walad* should become free *ipso iure* on the death of her master, and no longer liable to be sold (or given) was first ordained by the caliph ʿUmar (see below). The starting point for this ordinance must be found in a *ḥadīth* transmitted by Abū Dāwūd (*ʿAtāḳ*, *bāb* 8) and Ibn Ḥanbal (vi, 360), the genuineness of which is thereby rendered certain (a later recasting: *Kanz al-ʿummāl*, iv, 5126). According to this, a woman, who had been sold in the pre-Islamic period by her uncle as a slave had borne her master a son and now on the death of her master was to be sold again to pay his debts, lamented her sad lot to the Prophet; the latter ordered the administrator of the estate to manumit the woman and gave him a slave in compensation. Ibn Ḥanbal observes on this case with justice that the different possible interpretations of the Prophet's treatment of the case gave rise to later *ikhtilāf*; there is no doubt that it was a decision for this one case only. A tradition given by al-Bukhārī (*ʿItk*, *bāb* 8; and several other passages) and al-Ṭaḥāwī (*Sharḥ maʿāni ʾl-āthār*, ii, 66) deals with a dispute over the paternity of a child of a slave-woman; Saʿd b. Abī Waḳḳāṣ claimed it as the illegitimate child of his dead brother ʿUtba, in accordance with the latter's last wish, while ʿAbd b. Zaʿma claimed it as the legitimate child of his deceased father by his concubine. In spite of the child's resemblance to ʿUtba, the Prophet decided on the principle *al-walad li ʾl-firāsh* ("the child belongs to the [legitimate] bed"). In view of the difficulties of interpretation raised by this *ḥadīth* (see the commentaries, especially al-ʿAynī, on al-Bukhārī) it might be in the main genuine (the secondary recast form which al-Ṭaḥāwī, ii, 67, also gives is certainly not genuine); in any case there is no mention of the manumission of the slave-woman here.

The above-mentioned ordinance of ʿUmar is certain from numerous accounts, although the details vary and are embellished with legends (see especially *Kanz*, iv, 5118, 5122, 5124; al-Ṣanʿānī, *Subul al-salām*, *kitāb al-buyūʿ*, on no. 11). Setting aside the settlement of the question whether it was preceded by another divergent ruling (*Kanz*, iv, 5118), the story that ʿUmar ordered the *umm al-walad* to be free from the birth of her child (al-Khʷārazmī, *Djāmiʿ masānīd al-imām al-aʿẓam*, ii, 166; also *Kanz*, v, 5116) must be regarded as a product of the later dispute over this question. For ʿUmar's decree in no way made a final settlement; it gave trouble under ʿUthmān (*Kanz*, iv, 5122), and ʿAlī again diverged from it (*ibid.*, 5129-31). Ibn ʿAbbās is specially mentioned as another opponent of ʿUmar's view among the Companions of the Prophet. In the dispute that now arose between the different opinions, the attempt was made on the one side to ascribe ʿUmar's decision to the Prophet (*ibid.*, 5115, 5117) and to ascribe the same opinion even to ʿAlī and Ibn ʿAbbās (ʿAlī: *ibid.*, 5132; Ibn ʿAbbās: *ibid.*, 5039-41; Ibn Ḥanbal, i, 303; Ibn ʿAbbās from the Prophet: al-Dārimī, 18, 38; Ibn Mādja, *ʿItk*, *bāb* 2; Ibn Saʿd, viii, 155 l. 20; Ibn Ḥanbal, i, 317), on the other hand, it was insisted, sometimes quite polemically, that the Prophet approved the sale of the *umm al-walad* (Ibn Mādja, *ibid.*; Ibn Ḥanbal, iii, 321; al-Ṭayālisī, no. 2200; *Kanz*, iv, 5125, 5127); against this, evidence was quoted to show that the Companions of the Prophet gave approval to ʿUmar's ordinance (Abū

Dāwūd, *ʿAtāḳ, bāb* 8; al-ʿAynī giving al-Bu<u>kh</u>ārī as authority, *ʿItḳ, bāb* 8). But these were not the only two theses put forward: another view ascribed to ʿUmar has already been mentioned (some traditions make the Prophet utter a corresponding opinion but one easily distorted to mean something else: Ibn Mād<u>j</u>a, *ʿItḳ, bāb* 2; Ibn Saʿd, viii, 155 l. 17 both transmitted through Ibn ʿAbbās; also *Kanz*, iv, 5128); ʿAlī is credited with having said: "If the master wishes, he can set free his *umm al-walad* and consider her manumission as her bridal gift" (*Kanz*, iv, 5133) and Ibn Masʿūd held the view that the *umm al-walad* should be manumitted at the expense of the share of the estate falling to her child (presumed free) (al-ʿAynī, *ibid.*), both variants of the fundamental thesis. From the point of view of the criticism of Muslim Tradition, none of these *ḥadī<u>th</u>s* is unimpeachable with the exception of the one quoted above in section 3, which itself is not free from ambiguity, so that it is usually preferred simply to quote ʿUmar and his *raʾy* as authority for the view that later prevailed.

3. The legal views

Al-ʿAynī (on al-Bu<u>kh</u>ārī, *ʿItḳ, bāb* 8 at the end) is therefore able to give a list of seven different expressions of opinion on the *umm al-walad* in addition to ʿUmar's from the period of the earliest jurists before the origin of the *ma<u>dh</u>āhib*: 1. The master may release her for money (i.e. as *mukātaba*); 2. She may be sold without restriction; 3. The master may sell her at any time during his life-time and when he dies she becomes free (she is thus regarded as *mudabbara*; al-<u>Sh</u>āfiʿī is said to have held this view); 4. She may be sold to pay a debt due by the estate; 5. She may be sold, but if her child is alive at the death of his father and her master, she is manumitted at the expense of any share he may have in the estate and inherits with him; 6. She can only be sold on condition she is set free; 7. Even if she is contumacious and runs away, she cannot be sold, but only if she is immoral or becomes an unbeliever (according to al-Muzanī; al-<u>Sh</u>āfiʿī could not come to a decision on this point). But even by this time the thesis that the *umm al-walad* could not be sold but became free on the death of her master, had won most supporters, among whom al-Ḥasan al-Baṣrī, ʿAṭāʾ, Mu<u>dj</u>āhid, al-Zuhrī, Ibrāhīm al-Na<u>kh</u>aʿī (cf. on him al-<u>Kh</u>ʷārazmī, *op. cit.*, ii, 167; *Kitāb al-Ā<u>th</u>ār*, 71, 102) and others are specially mentioned. Particular questions which now arise for the first time are referred back to older authorities, such as the decision no. 5 to Ibn Masʿūd, Ibn ʿAbbās and Ibn al-Zubayr (*ibid.*), decision no. 6 to ʿUmar (*ibid.*; also *Kanz*, iv, 5123), other details also to ʿUmar (*Muwaṭṭaʾ*, vulgate, *ʿItḳ, bāb* 8, *riwāya* of al-<u>Sh</u>aybānī, *kitāb al-buyūʿ, bāb bayʿ ummahāt al-awlād*, al-<u>Kh</u>ʷārazmī, *ibid.*, etc.).

In the time of the formation of the *ma<u>dh</u>āhib*, the view that the *umm al-walad* cannot be sold is held by Abū Ḥanīfa with Abū Yūsuf, Zufar, al-<u>Sh</u>aybānī and their colleagues, al-Awzāʿī, al-<u>Th</u>awrī, al-Ḥasan b. Ṣāliḥ, al-Lay<u>th</u> b. Saʿd, Mālik (*Muwaṭṭaʾ*, *loc. cit.*; *Mudawwana*, viii, 23) and his colleagues, Abū <u>Th</u>awr and Ibn Ḥanbal. This is also the final opinion of al-<u>Sh</u>āfiʿī and therefore that of his colleagues and pupils, while he, according to a reliable tradition, had previously sanctioned the sale of the *umm al-walad* (al-ʿAynī on the authority of al-Bu<u>kh</u>ārī, *ʿItḳ, bāb* 8; al-Nawawī, *Ma<u>dj</u>mūʿ*, ix, 243; see also above); the liberation of the *umm al-walad* was deduced from this in three ways (al-Nawawī, *ibid.*) so that in all we have four different opinions attributed to al-<u>Sh</u>āfiʿī (al-<u>Sh</u>awkānī, *Nayl al-awṭār, kitāb al-ʿitḳ, bāb umm al-walad*, on no. 7). According to Dāwūd, also, and the Ẓāhirīs, the <u>Sh</u>īʿī Imāms and the Twelver Imāmīs (here, however, sometimes with the qualification that she becomes free if she was still in the possession of her master at his death and her child is alive) and the Muʿtazilīs (al-<u>Sh</u>awkānī, *op. cit.*), she can be sold. Although the four Sunnī *ma<u>dh</u>āhib* in the end all declared that the *umm al-walad* could not be sold, the existence of *i<u>dj</u>māʿ* on this point is nevertheless sometimes doubted (al-Ṣanʿānī, *op. cit.*, on no. 12; al-<u>Sh</u>awkānī, *op. cit.*), sometimes, however, also definitely asserted (al-Nawawī, *op. cit.*). The verdict of a *ḳāḍī* who gave a decision opposed to this teaching is not absolutely without support (see e.g. Nawawī, *op. cit.*, etc.).

In order to prevent the birth of a child the practice of *ʿazl* [*q.v.*] or coitus interruptus was frequent in intercourse with slave-girls, and it is therefore often discussed in connection with the *umm al-walad*. The most important of the references in tradition on this subject have been collected by Wensinck, *Handbook of early Muhammadan tradition*, s.v. *Intercourse*; here it is sufficient to say that *ʿazl* was considered to be permitted with a slave-girl. To prevent a slave-girl becoming *umm al-walad*, the master had also the possibility of not acknowledging the paternity of her child; this goes back to a similar usage in the pagan period (see above, section 1). While this was never so rigidly regulated as the case of disputing the paternity of a wife's child (see Wensinck, *op. cit.*, s.v. *Child*, and LIʿĀN), nevertheless an effort was made to restrict the right of disputing the paternity in the case of the *umm al-walad* also. *Ḥadī<u>th</u>s* are quoted from ʿUmar and Ibn ʿUmar to the effect that no one who has had intercourse with a slave-girl has the right to dispute the paternity of her child, even if he says he used *ʿazl* or there is another paternity possible. The Mālikīs and <u>Sh</u>āfiʿīs agree with this. The Ḥanafīs, on the other hand, hold the view that the paternity of the child and the character of the slave as *umm al-walad* in this case depends entirely on an acknowledgment by the master. For this they cite traditions to the effect that Ibn ʿAbbās and Zayd b. <u>Th</u>ābit had disputed the paternity of children of their slave-women on the ground that they had used *ʿazl*. This question is discussed by al-Ṭaḥāwī (*op. cit.*, 66, 68) and the traditions cited.

That the child borne by a slave to her master (on the assumption that his paternity is established) is free, has always been recognised in Islam without any difference of opinion and in the discussion of the position of the *umm al-walad* it is regarded as a presumption and argument for her not being sold. The deduction is natural that the father's recognition of children born in concubinage (see above, section 1) must as a rule have been regarded as a matter of course in the days just before Islam; the survival of a considerable possibility of disputing paternity with regard to a concubine seems to have actually been caused primarily by the considerable improvement in the position of the *umm al-walad* under Islam at the expense of her master.

The details of the teaching of *fiḳh* about the *umm al-walad* are as follows. Every, even non-Muslim, slave-girl who has borne her master (even after his death) a child is considered *umm al-walad*; on the death of her master she becomes *ipso iure* free (so that she can neither be sold to pay off debts on the estate [cf., however, below] nor can she be included in the third of the estate set aside for legacies); a legacy set aside by her master in her favour is therefore valid, as tradition even from ʿUmar's time shows (al-Dārimī, *Waṣāyā, bāb* 27); all legitimate and illegitimate chil-

dren whom she has after becoming pregnant by her master are likewise free, in so far as they are not already free as children of her master. Even in the case of a stillborn child, the mother becomes *umm al-walad*; opinions differ regarding a miscarriage. There is also a difference of opinion in the case where a man marries a foreign slave, makes her pregnant, and then sells her, as well as in the case where a man makes his son's slave pregnant. From the *umm al-walad*'s expectancy of reversion to freedom, it follows that she cannot be sold or pledged; if she commits a crime the master cannot evade his responsibility for her by disposing of her. In other respects she remains a slave: she has no right to property; the *diya* or *ars̲h̲* paid for injuries to her belong to her master, etc. On the question whether the master may marry her without her consent, opinions differ. In any case, the master has the right to her body and to her labour, but the Mālikīs allow him only to demand light work from her and prohibit him hiring her out. On the legal position of the *umm al-walad* of a *mukātab* and that of a non-Muslim who adopts Islam, opinions vary. Apart from the fact that the *umm al-walad* can be sold to pay debts which her master had incurred before she became pregnant, she loses her reversion to liberty only, in the opinion of the Ḥanafīs and Mālikīs, if she deliberately kills her master. According to the Ḥanafīs, in this case she is liable to *ḳiṣāṣ*, but in the case of accidental killing, nothing is done to her; according to the Mālikīs, in the case of deliberate killing she becomes the slave of the heirs who can kill her or not; if they leave her alive, she receives 100 lashes and is put in prison for a year. According to the S̲h̲āfiʿīs, she has to pay *diya* in both cases and among the Ḥanbalīs, according to one *riwāya*, not more than her own value or the *diya*, according to another *riwāya*, her own value. On the opinion of the S̲h̲īʿī *imāms*, which differs not inconsiderably, see Querry, *Droit musulman*, ii, 147 ff.

In Muslim law, a most rigid distinction is made between marriage and concubinage, so much so that the master cannot enter into marriage with his slave at all. Divergences from this rule are extraordinarily rare. S̲h̲ad̲h̲ād b. Ḥakīm (d. 210/825), a companion of Zufar's, is said, when he bought a slave, to have married her on the ground that "perhaps she may be a free woman" (ʿAbd al-Ḳādir, *al-D̲j̲awāhir al-muḍīʾa*, i, no. 668; Ibn Ḳuṭlūbug̲h̲ā, ed. Flügel, no. 81); and the *Fihrist* (207, 15) records with reservation of al-Ṭaḥāwī (d. 322/934) that he wrote a work in which he justified marriage with slaves (but probably one's own). But the authenticity of such stories is not certain; the first is among a number of anecdotes and the second is based on hearsay only. A trace of the old Arab custom of a concubinage merging into a marriage (see section 1) is not necessarily, however, to be seen in this; the first story would be explained by the excessive scrupulousness often shown by religious people in secular affairs, and the second by the also not rare complaisance towards princes, which could be attributed to al-Ṭaḥāwī in polemics.

In spite of all the ameliorations which the development of Muslim law brought to the position of the *umm al-walad*, the old contemptuous feeling towards a union with a slave and the children born from it long remained. Among the *ḥadīt̲h̲s* which condemn the maintenance of concubines, one with a doubtless anti-ʿAbbāsid bias survived down to al-Buk̲h̲ārī (*Īmān*, *bāb* 37; *ʿItḳ*, *bāb* 8) and Muslim (*Īmān*, trads. 1, 5, 7), but had its meaning distorted. This was the last echo of the old pre-Islamic point of view. Under the completely changed social conditions, the absolute equality of the children born from a marriage with a freewoman and in concubinage has now been long completely established.

(J. Schacht)

UMM AL-WALĪD, a settled site of Jordan, dating back to Roman times and occupied for several centuries after the advent of Islam. It lies 13 km/ 8 miles southeast of Mādaba in lat. 31° 39' N., long. 35° 52' E.

Two Roman temples and a mausoleum have been discovered there. It seems to have been little inhabited in Byzantine times, but enjoyed an important development in Umayyad times, when there grew up a village with three forts or *ḳuṣūr* and a mosque. There was a modest reoccupation of the site in Mamlūk times, but it was thereafter abandoned. Excavations were carried out there by a Swiss team from 1988 to 1997. The eastern *ḳaṣr*, the largest, is a square with sides each 70 m/230 feet, with a surrounding wall reinforced by semicircular buttresses. A single entrance leads to a great central court with access through doorways to five lateral courts connected with five *bayt*s each of five or six rooms. Important discoveries of ceramics, glassware and bronze objects have been made in this *ḳaṣr*. The other two *ḳuṣūr* are of smaller size (46 m/150 feet and 48 m/157 feet square, respectively) and are without buttresses, but have similar plans to the eastern *ḳaṣr*. The Umayyad period mosque has an almost square plan, with two transverse arches supporting a flat roof and a semicircular *miḥrāb*, exactly like the mosques of K̲h̲ān al-Zabīb 25 km/16 miles to the southeast of Umm al-Walīd and of D̲j̲abal Says [*q.v.* in Suppl.]. There are traces of an earlier, rectangular mosque.

The village of Umm al-Walīd was the centre of large-scale agricultural activities, as witness the two imposing stone dams a kilometre apart on the Wādī Ḳanāṭir, 2 km northwest of the village. The upper one, 135 m/ 515 feet long, 9 m/30 feet high and 5.8 m/19 feet wide, was built in the Umayyad period and raised by 3 m/10 feet; the lower one, of Umayyad construction, is narrower in width and less high but, at 187 m/613 feet, longer. A grape press from the Umayyad period has been found at the side of the lower dam.

Aram. *umetha* (Horovitz, 190), and ultimately from Akkad. *ummatu* (Jeffery, 69). Additional meanings (from Ar. *amma*, drawn principally from Lane) are: a mode of acting (cf. *sunna*); a morally exemplary person; tallness, beauty, and justice of stature of a person. In the Ḳur'ān, *umma* usually refers to communities sharing a common religion, whereas in later history it almost always means the Muslim community as a whole while admitting of regional, essentially non-political expressions (as "the Umma in North America", the American "Prison Umma" and so forth). The pl. *umam*, although occurring in the Ḳur'ān, means "nations" in modern usage and is therefore distinct from the Islamic meaning uormally associated with *umma* (e.g. *al-Umam al-Muttaḥida*, "the United Nations").

1. In the Ḳur'ān. The word occurs some 62 times in the Ḳur'ān in the sense of religious community, as well as instances where it means "fixed term" (XI, 8; XII, 45) and communities of animals like unto human groups (VI, 38). *Umma* also refers to the Patriarch Abraham as a model of righteousness (XVI, 120). The Ḳur'ān teaches that each *umma*, perhaps in the sense of a generation of contemporaries sharing a common belief and value system, has an appointed term decreed by God. "When their term is reached, not an hour can they cause delay, nor advance it in anticipation" (VII, 34; cf. XV, 5). Moreover, to every community has been sent a prophetic messenger bearing God's teaching. "When their messenger comes before them, the matter will be judged between them with justice, and they will not be wronged" (X, 47). In both Meccan and Medinan passages (following *Gesch. des Qor.* chronology), *umma* may refer to the archetypal or potential unity of mankind and prophetic religion, using the phrase *umma wāḥida*. In XXIII, 52 (Meccan), the fellowship of prophetic messengers (*rusul*) is described as a "single *umma*" (cf. XXI, 92), whereas in XVI, 120 (Med.), we read that "mankind was one *umma*" before God sent messengers with the Book. Sūra X, 19 reads: "Mankind was but one *umma*, but differed [later]". Prophets and other agents (e.g. *dj̲inn*) are often associated with *ummas* in pre- and post-*hid̲j̲ra* passages but nowhere as frequently as the third Meccan period (e.g. XLI, 25; XVI, 36, 63; XVI, 84, 89; XXVIII, 75). In XLIII, 22, 23, *umma* is equivalent to *milla* and means "traditional religion" of a people, and by extension "guidance" (*hudā*), however inferior compared to divine prophecy. There is in passages like this a foreshadowing of the full message of Islam as a restorer of the archetypal spiritual and moral unity of humans.

There is in the Ḳur'ān a chronological development of the meaning of *umma* from generic application to religious communities to a more focused reference to the emerging Muslim community. So we have here a matter of *umma* not essentially changing its meaning as religious community throughout the chronological development of the Ḳur'ān so much as having its meaning progressively augmented as the prophetic message reaches its fullest development. That is, if by the Medinan period *umma* tends to refer more exclusively to the Muslims, it nevertheless also carries with it the more inclusive meaning of humanity in its potential toward becoming Muslim. The Ḳur'ān does not thus apply *umma* exclusively to the Muslims. But it does appear to hold up *umma*, by Medinan times, as a special term that may refer only to the godly component within a religious community. In III, 104, *umma* refers to a hoped-for mature cohort of Muslim believers who, after experiencing God's grace and protection, strive after righteousness. In V, 66, both Jews and Christians are acknowledged to have members comprising a "rightly balanced community" (*umma muḳtaṣida*), but many others pursue evil.

In II, 128, Abraham and Ishmael pray, after erecting the Ka'ba: "Our Lord, make us submissive (*muslimīn*) to You, and of our progeny a people submissive (*umma muslima*) to You". The sense of historical Islam as being rooted in the archetypal religion of Abraham, including employment of the phrase *umma muslima*, is a characteristically Medinan representation as it also validates the restoration of ancient Ka'ba-oriented religious rites (*manāsik*) within a recovered monotheistic context. Although *umma muslima* may be translated as "Muslim community", it is erroneous to imbue it with the kind of meaning the phrase would later have, after Islam had become institutionalised and Ḳur'ānic references such as this—however authoritative—had become historically reified. The climactic point of the Ḳur'ānic use of *umma* referring to the Muslims occurs in III, 110, where those who "die not save as Muslims" (III, 102), and who "enjoin the right and forbid the wrong", and who are "successful" (*al-mufliḥūn*) (III, 104), are characterised, in comparison with the People of the Book (Jews and Christians), as "the best *umma* evolved for mankind". Finally, the Muslim *umma* has been established by God as a "midmost community" (*ummat^an^ wasaṭ^an^*), usually understood as justly balanced and in a mediating position, "that you might be witnesses over mankind, and the Messenger a witness over yourselves" (II, 143). This passage closes with the reminder that the *ḳibla* [*q.v.*] of the Sacred Mosque (*al-masdj̲id al-ḥarām*) in Mecca has been appointed as the ritual centre of the Muslim community, demarcating it from other peoples and unifying it from all directions. The direction of *ṣalāt* and the performance of the *ḥadj̲dj̲* have continued to the present to have an incalculably great impact in marking off the global Muslim community, and maintaining its unity and common purpose by transcending the racial, ethnic, cultural, and national differences among Muslims.

W.M. Watt has analysed the Medinan *umma* as an innovative, theocratic politico-social order, similar in some ways to the Israelites under Moses (although not intentionally based on it), that transcended tribalism by basing itself on common faith rather than kinship. God is characterised by Watt as the "head and director" of the *umma* and all who participate in it enjoy divine security and protection (*d̲h̲imma*). (*Muhammad at Medina*, Oxford 1956, 238-44).

2. In *Ḥadīt̲h̲*. There is not, in the *ḥadīt̲h̲* literature, the range of meanings of *umma* that is found in the Ḳur'ān. However, the word occurs frequently there, most often with reference to the Muslim community. Perhaps the most fateful *ḥadīt̲h̲* on this topic is "Truly my *umma* will never agree together on an error" (*inna ummatī lā tadj̲tami'u 'alā ḍalālatin*, cited by Wensinck, *Concordance*, only from the *Sunan* of Ibn Mādj̲a, *Fitan*), a *vox populi vox Dei* formulation that has played importantly in Sunnī jurisprudence under the category of consensus or agreement (*idj̲mā'*) as a source of *fiḳh*. A soteriologically-orientated tradition is "Everyone of my *umma* will enter the Garden except one who rejects [sc. disobeys] me" (al-Buk̲h̲ārī, *Fitan*). Other traditions speculate as to whether the Muslim *umma* will constitute a certain proportion (a quarter, a third, a half?) of Paradise (e.g. see Muslim, *Īmān*). Ibn Mādj̲a (*Zuhd*) preserves a tradition that claims one-third of the inhabitants of the Garden as "from this [i.e. the Muslim] *umma*", with the remainder coming from "the rest of the *ummas*" (*min sā'ir al-umam*).

Ibn Mādja (*ibid.*) also includes a *ḥadīth* that declares: "On Resurrection Day there will be, finally, seventy *ummas*, (of which) we [i.e. the Muslims] shall constitute their last and their best."

Another tradition tells of the assembled masses of resurrected persons on Judgement Day imploring the former messengers Adam, Noah, Abraham, Moses and Jesus, to intercede with God for their salvation. One by one they decline, citing their disqualifications. Finally, Muḥammad is asked by the people to undertake the task and, upon accepting the responsibility, he prostrates himself before the Lord, Who then says: "Muḥammad, raise thy head; ask and it would be granted; intercede and intercession would be accepted. I would then raise my head and say: O my Lord, my people, my people (*ummatī!, ummatī!*)." (Muslim, *Īmān*). It is, of course, possible to understand "My people, my people" to refer exclusively to the Muslims. But since Muḥammad is the last to be asked and the only one of the prophetic lineage to accept the charge, "My people" should be understood to be all whom God has resurrected on the Last Day.

The cultivation of Muḥammad's *Sunna* and its enshrining in the *ḥadīth* literature, and even more in the habits of the hearts and bodies of Muslims, is the most powerful expression imaginable of the transfer of charisma from a religious founder to his community of followers. In this sense, even with all the political and other divisions and disagreements among Muslims through time, there is utter consensus concerning the Muḥammadan nature, in the proper sense, of the Muslim *umma*. This does not in any way imply idolatry, for the Ḳur'ān itself commands the believers to obey God and His Messenger (III, 132), and to embrace Muḥammad as a "beautiful pattern" (*uswat^un^ ḥasanat^un^*, XXXIII, 21) of conduct. It may be held that the Ḳur'ān contains the basic doctrine of the *umma* within the divine plan of guidance for mankind, whereas the Sunna of Muḥammad—by which is not meant simply *ḥadīth*s that mention the word *umma*—provides inspiration and instruction on how Muslims individually and collectively can realise the *umma*.

3. *Umma* in later Islamic discourse. The *umma*'s establishment as a community with political authority and autonomy, as well as religious and social characteristics, was in Medina. The important document, contemporary with the Ḳur'ān, widely known as the "Constitution of Medina", described the Medinan community as a whole as an *umma*, with the Jews there constituting an *umma* alongside the main body. Mutual defence and security were crucial elements in the arrangement.

Although other concepts relate to an understanding of *umma*—such as *dār al-Islām* vs. *dār al-Ḥarb*, *khilāfa* and *djamā'a*—throughout Islamic history the *umma* has usually been thought to possess final authority (under God) with respect to overseeing the leadership of the Muslims. The consensus has favoured a unified *umma* as an ideal that transcends a particular period's limitations and divisions. Colonialism's challenge instigated a great renewal of *umma* awareness among Muslims, and modern Muslim thinkers since the 19th century have sustained a variety of discourses on the political as well as other meanings of the concept of *umma* for today, including particularly whether and to what extent it contains democratic principles.

(F.M. Denny)

UMMĪ (A.) "illiterate" or "belonging to a people without a revealed book". This relative adjective appears five times in the Ḳur'ān. It is used only once, in the singular, in regard to the Prophet; since the phrase *al-nabī al-ummī* has attracted varying interpretations, it will be treated later.

1. The *ummiyyūn* (pl. of *ummī*) denote in some contexts the Jews who only know the Torah imperfectly (II, 78), and in others the Arab polytheists of the pre-Islamic period (III, 20; LXII, 2). These last, however, unlike the Jews and Christians, do not have a revealed scripture; see e.g. al-Ṭabarī, *Tafsīr*, Beirut n.d., iii, 214-15, xxviii, 94; al-Zamakhsharī, *Kashshāf*, Beirut 1995, i, 158, 341; Ibn Kathīr, *Mukhtaṣar tafsīr Ibn Kathīr*, Beirut 1981, i, 81, 273. This latter application is corroborated by III, 75, where the term *ummiyyūn* is probably placed in the mouths of the Jews of Medina to describe non-Jews, sc. the "Gentiles" or pagans (Nöldeke, *G. des Q.*, i, 14; R. Paret, *EI*[1] art. *Ummī*; S.H. Boubakeur, *Le Coran*, Paris 1979, ii, 1825).

At the same time, the commentators stress that the Arabs are described as *ummiyyūn* in the Ḳur'ān because few of them knew how to write; cf. the *ḥadīth*, given by al-Bukhārī and Muslim, "We are an illiterate community (*umma ummiyya*), for we do not know how to write or count." The term *ummī* is, in fact, generally set forth as coming from *umm*, meaning basically "mother" in the Semitic languages (see e.g. W. Baumgartner, *Hebräisches und aramäisches Lexikon zum Alten Testament*, Leiden 1967, i, 59). An illiterate person is thus one who remains in the same state as when his mother bore him (*LA*, Beirut 1988, i, 220; al-Ḳurṭubī, *al-Djāmi' li-aḥkām al-Ḳur'ān*, Cairo 1967, ii, 5, vii, 298-9), and such was the state of the Arabs from the midst of whom Muḥammad was raised up. In this respect, Boubakeur remarks that one should distinguish between *ummī* "one ignorant on the intellectual plane" and *djāhil* "one ignorant on the moral plane", cf. his *Coran*, i, 519.

2. As applied to the Prophet (Ḳur'ān, VII, 157-8), *ummī* involves two important cruces. For most Muslim authors, it involves Muḥammad's illiteracy, confirmed by XXIX, 48, "Before [the Ḳur'ān] you could not read any book nor trace the line with your right hand." The greatest miracle (*mu'djiza*) of the Prophet thus resides in the fact that the Book was revealed to him (al-Khaṭṭābī, *Bayān i'djāz al-Ḳur'ān*,

tr. C. Audebert, *Al-Ḫaṭṭābī et l'inimitabilité du Coran*, IFEAD, Damascus 1982, 140; *LʿA*, *loc. cit.*). Moreover, this illiteracy proves that Muḥammad could not have had any direct knowledge of the Judaeo-Christian scriptures, hence could not have plagiarised them (R. Blachère, *Le Coran, traduction selon un essai de reclassement des sourates*, Paris 1947, 8). For Ibn Khaldūn, Muḥammad's *ummiyya* is not a deficiency in him, as it would be with the rest of mankind, but is a sign of his perfection (*kamāl*) (cf. *Muḳaddima*, Beirut n.d., 465). For his part, al-Alūsī remarks that the epithet *ummī* has no pejorative tinge at all when applied to the Prophet (*Rūḥ al-maʿānī fī tafsīr al-Ḳurʾān al-ʿaẓīm wa 'l-sabʿ al-mathānī*, Beirut 1398/1979, v, 79).

Muḥammad's illiteracy is not regarded with certainty by orientalists (Nöldeke, *op. cit.*, i, 15; Blachère, *op. cit.*, 8-11) nor even by Muslim authors (al-Alūsī, *loc. cit.*). The Persian historian and vizier Rashīd al-Dīn Faḍl Allāh (d. 718/1318) thought it hardly likely that "the best of created beings" should not have known the art of writing (see *al-Madjmūʿa al-rashīdiyya al-sulṭāniyya*, ms. B.N. Paris, Ar. 2324, fol. 227a). The Ṣūfīs regard this question as a futile debate: that Muḥammad, as a Meccan merchant, should more or less have known how to read and write, does not bring into question his spiritual virginity, by virtue of which he was the receptacle for the Revelation (Ibn al-ʿArabī, *al-Futūḥāt al-makkiyya*, Cairo 1329/1911, ii, 644, tr. in W. Chittick, *The Sufi path of knowledge*, Albany 1989, 235-8; A. Ibn al-Mubārak, *al-Ibrīz min al-kalām sīdī al-ghawth ʿAbd al-ʿAzīz al-Dabbāgh*, Damascus 1984, i, 188). This virginity, which recalls that of Mary (A. Schimmel, *Mystical dimensions of Islam*, Chapel Hill, N.C.. 1975, 26-7), has caused the Prophet to be compared to "a white sheet of paper before the divine Pen" (F. Schuon, *Comprendre l'Islam*, Paris 1976, 118).

Certain orientalists have seen in *al-nabī al-ummī* "the prophet of the Gentiles", i.e. one sent to a people without any revealed book (A. Badawī recounts and refutes this position in his *Défense du Coran contre ses critiques*, Paris 1989, 14-18). This hypothesis, conformable to what has been said above about the plural *ummiyyūn*, does not contradict the acceptance of "the illiterate prophet", and Muslim authors themselves attribute a number of senses to the phrase *nabī ummī* (one may cite, e.g., the meaning of "Meccan", *ummī* coming in this case from Umm al-Ḳurā, cf. al-Ḳurṭubī, *op. cit.*, vii, 299; al-Alūsī, xiv, 93). The sense of "illiterate" was to bring it nevertheless into the heart of the Muslim community fairly quickly. One should further cite the fact that, for Badawī, 19-21, *ummī* is a relative adjective from *umam*, pl. of *umma*, "nations, peoples", an interpretation which can be justified grammatically, cf. Wright, *Arabic grammar*, ii, 162-3. According to this view, which clearly corresponds to that of the Ḳurʾān, the Prophet's message was thus intended for the whole of mankind and not just for the Arabs.

The spiritual interpretation of the *nabī ummī*, as formulated by the Muslim mystics, was to determine for them the type of the *shaykh ummī*: whether he was really illiterate or not, this last receives the "knowledge emanating directly from God" (*al-ʿilm al-ladunī*). Divine inspiration (*ilhām*) thus replaces—admittedly to only a slight degree—the prophetic *waḥy* (on the *shaykh ummī*, see E. Geoffroy, *Le soufisme en Egypte et en Syrie sous les derniers Mamelouks et les premiers Ottomans*, IFEAD, Damascus 1995, 299-307.

(E. GEOFFROY)

ʿUMRA (A.), the "lesser pilgrimage", *al-ḥadjdj al-ṣaghīr*, one of the acts of devotion (*ʿibāda* [*q.v.*]) forming part of the Muslim ritual.

1. Etymology

Muslim scholars claiming authority in linguistic matters put forward two possible original senses of the word *ʿumra*. The first is that the term is said to have had, like the word *ḥadjdj* [*q.v.*] "pilgrimage", the sense of "making one's way towards some place or person" (*al-ḳaṣd*). The second, more frequently proposed, is that the term would mean more precisely "visit" (*al-ziyāra*). See al-Azharī, *al-Ẓāhir fī alfāẓ al-Shāfiʿī*, Beirut 1994, and al-Nawawī, *Taḥrīr alfāẓ al-Tanbīh*, Damascus 1988, 133.

2. The ceremonies of the *ʿumra*

The *ʿumra*, like the *ḥadjdj*, can only be performed in a state of ritual purity (*iḥrām* [*q.v.*]). On assuming the *iḥrām*, the pilgrim (*muʿtamir*) must make up his mind whether he is going to perform the *ʿumra* by itself or in combination with the *ḥadjdj* and express his intention in an appropriate *niyya* [*q.v.*]. If he combines the *ʿumra* with the *ḥadjdj* (see below) he can assume the *iḥrām* for both pilgrimages at once; in the other case, the *iḥrām* must be specially assumed for the *ʿumra* in the unconsecrated area (*ḥill*) outside of the *ḥaram* of Mecca. This holds also for native Meccans who, when they are going to perform the *ḥadjdj*, can assume the *iḥrām* within Mecca. Three places are preferred for the assumption of the *iḥrām* for the *ʿumra*: Djiʿrāna, Ḥudaybiya and especially Tanʿīm. The latter place was therefore also known as al-ʿUmra. With the utterance of the *labbayka* [see TALBIYA] formula, the actual ceremony of the pilgrimage begins. The *muʿtamir* goes to Mecca in order first of all to circumambulate the Kaʿba [see ṬAWĀF]. He enters the mosque through the north door of the north-east side (Bāb al-Salām), goes under the portal of the Banū Shayba to the Black Stone built into the wall of the Kaʿba and, turning right, begins the sevenfold circumambulation of the Kaʿba, saying prayers all the while. The first three circumambulations are performed at a rapid pace (*ramal*), the last four at an ordinary rate. After this is finished, in order to acquire a special blessing, he presses himself against the part of the Kaʿba wall which lies between the Black Stone and the door of the Kaʿba. In conclusion, he prays two *rakʿa*s behind the *Maḳām Ibrāhīm*, drinks a draught of the holy Zamzam water and touches once again in farewell the Black Stone (these last ceremonies are, however, not considered absolutely necessary). The *muʿtamir* now leaves the mosque through the great al-Ṣafā door in order to perform the second essential part of the *ʿumra*, the running between al-Ṣafā and al-Marwa [see SAʿY]. He goes to the hill al-Ṣafā and utters a few prayers there. He then goes to the hill al-Marwa, over 400 yards farther north, past the north-east side of the mosque. A short low-lying stretch at the east corner of the mosque is covered at a more rapid pace (*harwala* or *khabab*). Reaching al-Marwa, the *muʿtamir* again utters a prayer. He then returns the same way in the reverse direction and so on until he has covered the distance seven times and ends at al-Marwa. He has thus completed the ceremony of the *ʿumra*, and has only to have his hair cut or be shaved by one of the barbers waiting there. If he is making the *ʿumra* in combination with the *ḥadjdj*, he only has his hair trimmed and has the proper cutting done on 10 Dhu 'l-Ḥidjdja at the end of the *ḥadjdj*.

3. The history of the *ʿumra* and its relation to the *ḥadjdj*

The ceremonies which make up the Muslim *ʿumra*

are undoubtedly for the most part taken over from the pre-Islamic period. They completely lack any close connection with the religion preached by Muḥammad, except for the Islamic prayers used in them. The Prophet did not alter these practices but only assimilated them to his teaching. This he could all the more readily do as their original significance seems to have been only obscurely understood by his contemporaries. That he allowed them to persist at all is probably less to be attributed to his personal reverence for them than to his political instinct which made him respect the traditions of his conservative fellow-countrymen.

The Muslim *ʿumra* as a group of ceremonies forming a single whole also goes back to a pre-Islamic institution. This is shown by the very fact that Muḥammad refers to it by a name which in his time seems already to have been a special term and enables us to assume that the thing itself was well known. This, however, does not mean that the separate parts of the pre-Islamic *ʿumra* exactly corresponded to those of the Muslim *ʿumra*. The two institutions, so far as we can see, did not exactly coincide. It is, however, very difficult to make out in what the difference lay, as we do not even know the earliest form of the Muslim *ʿumra*, much less of that of the D̲j̲āhiliyya. We have therefore to make up for the lack of authentic sources by deductions from material which is not absolutely above reproach.

The pre-Islamic *ʿumra* probably consisted of ritual acts performed in a state of *iḥrām* within Mecca and including the *ṭawāf* of the Kaʿba. On the other hand, the course between al-Ṣafā and al-Marwa (*saʿy*) does not seem to have been included. This follows from the text of sūra II, 153/158, which clearly distinguishes between *ḥad̲j̲d̲j̲* and *ʿumra* on the one hand and the course between al-Ṣafā and al-Marwa on the other and describes the performance of the latter in connection with the *ḥad̲j̲d̲j̲* or *ʿumra* as irreproachable, indeed even meritorious, but still as a work of supererogation. Muḥammad himself performed it in 10/632 following the *ṭawāf* and thus by his example gave a further stimulus to the incorporation of the *saʿy* into the Muslim *ʿumra*. If the Muslim *ʿumra* in this respect shows an accretion compared with that of the pre-Islamic period, it seems also to have lost something. For the *ʿumra* in the D̲j̲āhiliyya can hardly have consisted of the *ṭawāf* alone. Probably an additional essential element in it was the sacrifice of animals bought for the special purpose, a custom which was later mainly confined to the *ḥad̲j̲d̲j̲*. Muḥammad himself brought sacrificial animals to the unfortunate *ʿumra* of al-Ḥudaybiya and a year later to the so-called *ʿUmrat al-Ḳaḍāʾ*.

As to the relation of the *ʿumra* to the *ḥad̲j̲d̲j̲*, the very similarity of these two institutions has contributed to confuse them and to blend their distinguishing features. Their reciprocal fusion had already begun in the last years of the Prophet. Muḥammad began the only *ḥad̲j̲d̲j̲* in which he took part as head of the Muslim community shortly before his death, by performing the *ṭawāf* and *saʿy* after his arrival in Mecca, ceremonies which did not originally form the beginning of the *ḥad̲j̲d̲j̲* but were elements of the Muslim *ʿumra*. He thereupon put off the *iḥrām* and said that the ceremonies so far performed formed an *ʿumra*. When, moreover, ʿUmar and others of those with him did not approve of putting off the *iḥrām* and did not follow him, this clearly shows how closely the ceremonies of the *ʿumra* were associated with those of the *ḥad̲j̲d̲j̲* for them and that, in their view, these holy acts should be performed in one and the same *iḥrām*. If we reflect that the revelation announced on this occasion (II, 192/196) laid down a penance for using the *ḥad̲j̲d̲j̲* for the *ʿumra* in this way and that Muḥammad to some extent acknowledged himself guilty, then it is natural to suppose that Muḥammad had only put off the *iḥrām* in order to be able to associate with his wives who were there and not with the object of keeping *ʿumra* and *ḥad̲j̲d̲j̲* absolutely distinct (see Snouck Hurgronje, *Het Mekkaansche feest*, 83-102). In any case, Muḥammad in the year 10/632 made the *ʿumra* precede the performance of the *ḥad̲j̲d̲j̲* and thus put his approval on the combination of *ḥad̲j̲d̲j̲* and *ʿumra*. This combination had a deeper cause: Muḥammad on the one hand proclaimed Mecca with the Kaʿba as the centre of the worship of Islam, and on the other, took over the *ḥad̲j̲d̲j̲*, which originally had very little, if anything at all, to do with Mecca, into Islam. He had indeed every reason to bring the Muslim *ḥad̲j̲d̲j̲* into connection with the sanctuary of Mecca. The more he succeeded, however, the more the *ʿumra* lost its *raison d'être* as a special pilgrimage to Mecca. It was therefore quite a natural development when the Muslim *ʿumra* became more associated with the Muslim *ḥad̲j̲d̲j̲* and original elements of the *ʿumra* were absorbed by the corresponding elements of the *ḥad̲j̲d̲j̲*, as was presumably the case with the sacrifices (see above). The *ʿumra* and the *ḥad̲j̲d̲j̲* did not, however, absolutely combine into one. This was prevented by, amongst other things, the fact that Muḥammad in the pilgrimage above mentioned drew a line of separation between the two by discarding the *iḥrām*.

In the consensus (*id̲j̲māʿ*) of Muslim opinion, two ways of combining the *ʿumra* with the *ḥad̲j̲d̲j̲* came to be recognised in course of time: *tamattuʿ* and *ḳirān*. The former term was applied, following II, 192/196 (*man tamattaʿa bi ʾl-umrati ilā ʾl-ḥad̲j̲d̲j̲i*), to the way which Muḥammad had actually followed, namely, combining *ʿumra* and *ḥad̲j̲d̲j̲* with a break in the *iḥrām*. ʿUmar threatened during his caliphate to punish its observance with the punishment of stoning and even under the early Umayyads it does not seem to have been usual. *Ḳirān* is the name given to the combination of *ʿumra* and *ḥad̲j̲d̲j̲* without breaking the *iḥrām*. In this, the *iḥrām* is assumed for the *ʿumra* and the *ḥad̲j̲d̲j̲* at the same time. As in the Muslim *ḥad̲j̲d̲j̲* the ceremonies which constitute an *ʿumra* are also performed according to the prevailing view an *ʿumra* is completely carried out when they have been performed, so that—if the *niyya* of *ḳirān* has been taken—the *ḥad̲j̲d̲j̲* is completed. Some authorities, however, demand that the ceremonies of the *ʿumra* should be specially carried through. The *iḥrām* must not be broken in any circumstances.

The *ʿumra*, in spite of its partial absorption into the *ḥad̲j̲d̲j̲*, has however retained its independence, although only to a limited degree. When the *ḥad̲j̲d̲j̲* is performed as *ifrād*, i.e. by itself (in contrast to *tamattuʿ* and *ḳirān*), the *ʿumra* also must be performed separately. Pilgrims who come from outside to Mecca seem as a rule in this case to perform the *ʿumra* after the completion of the *ḥad̲j̲d̲j̲* ceremonies so that they naturally have to assume the *iḥrām* again. In the course of time, this independent *ʿumra* ceremony seems to have become gradually confined to such Muslims as were permanently or for a considerable time resident in Mecca or came there at a time other than that of the *ḥad̲j̲d̲j̲*. But it was just this local limitation of the independent *ʿumra*, that favoured the survival of traditions from the pre-Islamic period. If we therefore learn that the *ʿumra* for centuries was celebrated

as an independent ceremony, preferably in the month of Radjab, we can probably see in this a survival of pre-Islamic tradition: the *ʿumra* in the time of Djāhiliyya was presumably a ceremony observed annually in Radjab and therefore had nothing to do with the *ḥadjdj*, the pilgrimage in Dhu ʾl-Ḥidjdja (cf. also the tradition according to which ʿUkkāsha had his hair cut in Radjab of the year 2 to make himself look like a pilgrim). As Muḥammad could only prepare the way for the combination of the *ʿumra* with the *ḥadjdj* but not complete it, the old tradition of performing it in Radjab survived for centuries later. It is only in comparatively modern times that Radjab seems to have lost its significance for the performance of the *ʿumra*. The custom of the Meccans of journeying to the holy places of Medina in Radjab perhaps broke it down. When *ʿumras* are now performed in dissociation from the *ḥadjdj* (i.e. in *ifrād*), the nights of the months of the fast (Ramaḍān) are specially favoured for this purpose, and especially the last ten which are connected with the *laylat al-ḳadr* [see RAMAḌĀN].

4. The significance of the pre-Islamic and the Islamic *ʿumra*

If the pre-Islamic *ʿumra* was annually performed in Radjab, and also if the calculation is correct which places Radjab originally in the spring, its similarity with the Jewish Passover strikes one at once. The animals which are sacrificed at it were perhaps, as in the Jewish ceremony, originally first-borns (cf. Wellhausen, *Reste*, 98-9; W. Robertson Smith, *Lectures on the religion of the Semites*[3], 227-8, 464). In Muḥammad's time, however, the original significance of the *ʿumra* seems to have been practically forgotten and it no longer fell in the spring.

The Islamic *ʿumra* is an expression of piety, mainly of a personal nature, especially if it is undertaken separately and not with the *ḥadjdj*, the ceremony observed annually by the Muslim community together. Probably this individual character is the result of the fact that it lost its independence in time, and so far as it was not associated with the *ḥadjdj*, constituted a work of supererogation. Before Islam the *ʿumra* had probably a more collective character.

5. The legal status of the *ʿumra*

The Ḳurʾānic injunction *wa-atimmū ʾl-ḥadjdj wa ʾl-ʿumra li ʾllāh* "complete the pilgrimage and the *ʿumra* for God" (II, 192/196), is, in regard to the *ʿumra*'s legal status, fairly ambiguous (the status of the *ḥadjdj* being completely firmly established through other sources). In effect, the imperative verb used in this verse is that meaning "to bring an enterprise to its conclusion" (*atamma*), so that, on a completely rigorous basis, one should not take the order as "to accomplish the *ʿumra*" but only, independent of its obligatory character or not, that of "to carry it through", leaving nothing out from the moment when the believer has embarked on its accomplishment. In sum, the obligation would concern the modalities of the *ʿumra* but not the act itself (the hermeneutic principle applied here being that a prescription regarding the modalities of the accomplishment of an act has no implications about the status of the act itself). Moreover, relying on a saying of the Prophet transmitted by Djābir, Abū Ḥanīfa, Mālik and al-Shāfiʿī in his "ancient doctrine" would thus consider that the *ʿumra* was a supererogatory pious act (*taṭawwuʿ*) but not an obligation. Another reading of II, 192/196 (which could yield "carry through the pilgrimage to its end, and the *ʿumra* is for God") would end up with the same conclusion. Other jurists, including Ibn Ḥanbal, al-Thawrī and al-Shāfiʿī in his "new doctrine", held, on the contrary, that the verb "to complete" could in this context have the extended meaning of becoming a synonym of "to accomplish", and, equally arguing from other sayings of the Prophet, they ended up by stressing the strict obligation of the "lesser pilgrimage". See al-Djaṣṣāṣ, *Aḥkām al-Ḳurʾān*, ed. Dār al-Fikr, n.p. n.d., i, 263-71; al-Shīrāzī, *al-Mudhabhab*, ed. Dār al-Fikr, n.p. n.d., i, 194-5.

(R. PARET-[E. CHAUMONT])

ʿUMŪM WA-KHUṢŪṢ (A.), literally "generality and specificity", a term of Islamic legal interpretation.

In the literature of *uṣūl al-fiḳh* [*q.v.*]—the Muslim discipline which lays out the principles governing the interpretation of texts—great attention is lavished upon the subject of the generality (*ʿumūm*) and specificity (*khuṣūṣ*) of terms. These categories emerge incessantly throughout the religious disciplines of Islam, since interpretation of the Ḳurʾān, the Sunna and other texts is an on-going task in those disciplines. However, they have special importance in legal science (*fiḳh*), since they bear upon the scope of applicability of rules of law (*aḥkām*).

The majority of the classical scholars subscribed to the notion that the Arabic language contains general expressions, that is to say, expressions which by virtue of their form signified a class of individuals comprehensively and all-inclusively. The various forms which such expressions could assume were called *ṣiyagh al-ʿumūm* "forms of generality". The literature of *uṣūl al-fiḳh* provides exhaustive lists of these forms. Examples include the indefinite plural (e.g. *muslimūn* "Muslims"; *darāhim* "dirhams"), the definite plural (e.g. *al-muslimūn*, "the Muslims"; *al-darāhim*, "the dirhams"), the definite singular (e.g. *al-muslim*, "the Muslim"; *al-dirham*, "the dirham"), and the definite plural with "all" (e.g. *kull al-muslimūn* "all the Muslims"; *kull al-darāhim*, "all the dirhams"). In contrast to these forms stand expressions that clearly are specific, such as proper names, personal pronouns, and demonstrative pronouns.

According to the majority view, whenever an interpreter came across a general expression in a text, he had grounds for an initial presumption to the effect that the author of the text intended an all-inclusive reference. For example, upon encountering the expression "the thief" in "As for the thief, male and female,

cut off their hands" (Ḳurʾān, V, 38), he would begin his interpretative deliberations by positing a presumptive general reference to all thieves. If he subsequently discovered a contextual clue indicating that specificity rather than all-inclusiveness was intended, he would then have grounds for setting aside this initial presumption. Otherwise, the initial presumption would stand.

Many pages in the *uṣūl al-fiḳh* literature are devoted to the subject of "particularisation of the general expression" (*takhṣīṣ al-ʿāmm*). An interpreter was always obliged to look for a "particulariser" (*mukhaṣṣiṣ, dalīl al-takhṣīṣ*) in the context before making a final conclusion concerning the scope of reference of a general expression. When a particulariser was found, the general expression was said to have been diverted from its normal all-inclusive reference to a specific reference. Particularisers were divided into two types: the "attached" and the "detached" particulariser. The former was part of the immediate context and is best illustrated by the exceptive phrase (*istithnāʾ*), as in the phrase "all Muslims except those over the age of forty". The latter had to be sought after in remoter contexts. It could be found anywhere within the body of authoritative texts. An example is the Prophet's saying "Amputation is to occur only where an amount worth a quarter of a dīnār or more has been stolen", which is used to overturn the presumption of an all-inclusive reference for "thief" in Ḳurʾān, V, 38, and establish that the expression has a specific reference to thieves who have stolen the amount indicated by the Prophet.

A minority school of thought denied the existence of any truly all-inclusive expressions in the Arabic language and insisted that the expressions classified by mainstream scholars as general were in fact inherently specific. Although this point of view had few adherents, its mere existence was sufficient to create a dialectical climate within which the commonly accepted way of thinking would have to be argued with great thoroughness.

UMUR PASHA, Bahāʾ al-Dīn ʿUmar (709-49/1309-48), early Turkish corsair and warrior and son of Meḥemmed, founder of the Aydîn-oghullarî [see AYDÎN-OGHLU].

The main source on him is the Turkish epic poem, unique of its type, the *Düstūr-nāme*, completed by its author, Enwerī, in 869/1464. Also, the Byzantine historians Gregoras and Cantacuzenus, his contemporaries, offer rich items of information on Umur, especially from 741/1341 onwards, when he was a participant in the Byzantine civil war. He received from his father the region of Smyrna, where he built a fleet and began the corsair warfare against the Christians which the Turkish maritime *beylik*s were waging. His activities disturbed the Westerners, especially the Venetians, and an alliance against the Turks, the *Sacra Liga*, was formed and a Latin fleet assembled in the Aegean Sea; after some successes against the Turks, it secured a great victory near Adramyttion (autumn 735). Umur soon began corsair activity again, and in 740/1340 was lord of the islands and the Aegean littoral, which paid him important annual tribute. His intervention in the Byzantine civil war (1341-7) as ally of Cantacuzenus was decisive for the latter's victory, and this increased his reputation as a warrior in all the West as well as in the Balkans. Meanwhile, the Turks' destructive raids once more led the Christian states to organise a Crusade whose main objective was Smyrna, and in October 1344 the Crusaders occupied the port and the lower citadel. In an attack launched against the Crusaders, Umur was killed by an arrow (April 1348).

Enwerī presented Umur as the ideal warrior for Islam. The Byzantine historians often call him "the barbarian", but Gregoras (ed. Bonn, ii, 649) remarks that "his conduct was not that of a barbarian" and that he was "civilised and close to Greek culture". An anonymous chronicle of Naples contains a description of Umur probably based on the impressions of Western ambassadors who visited him in 1346: seated on the ground, he ate a dish which resembled rice and milk; he was well-dressed, with an embroidered, purple silk robe; he used a golden spoon and all his tableware was valuable and adorned; he was stout and somewhat fat. He declared that he was not afraid of the Christians because he always had two powerful friends, *Guelfo e Gibellino*. We thus have some idea of the luxury of the court of the Aydîn-oghullarî (already noted by Ibn Baṭṭūṭa in 733/1333), and can discern that they were well-informed about the political differentiations amongst the Christians.

UNAYF b. Daldja b. Ḳunāfa al-Kalbī (full genealogy in al-Ṭabarī, ii, 204, 428, and see Ibn al-Kalbī-Caskel, i, Table 286, ii, 572), tribal chief of the Kalb in Syria [see KALB B. WABARA], *fl.* in the early part of the 7th century. His son Baḥdal was the father of Maysūn [*q.v.*], wife of the Umayyad caliph Muʿāwiya I and mother of Yazīd I, and a strenuous supporter of the Sufyānid cause.

ʿUNAYZA, an important town of the emirate of al-Ḳaṣīm in Nadjd, Saudi Arabia. The

town is situated about 350 km north-west of the capital, al-Riyāḍ (Riyadh) and 40 km south of the major town Burayda (Farsi, *National guide and atlas of the Kingdom of Saudi Arabia*, Jeddah 1989, map 51-2; Hussein Hamza Bindagji, *Atlas of Saudi Arabia*, Oxford 1980, 39).

Undoubtedly an ancient site, the name occurs in pre- and early Islamic poetry: *Ḥamāsa*, ed. Freytag, 211, 501; Imru' al-Ḳays, ed. Ahlwardt, *The Divans*, no. 34.3; *Naḳā'iḍ Djarīr wa 'l-Farazdaḳ*, ed. A.A. Bevan, Leiden 1905-12, 3 vols., i, 334, ii, 964; Aws b. Ḥāritha in Hamdānī, 172. The dual form 'Unayzat[ayn] occurs in the *Mu'allaḳa* of 'Antara, l.9, a form which both Bakrī, *Mu'djam*, 670, and Yāḳūt, iii, 739, accept as being the same place name as 'Unayza. The latter tells us also that the town belongs to the B. 'Āmir b. Kurayz, and the mediaeval geographers in general mention 'Unayza as a watering-place "between al-Baṣra and Mecca". Al-Hamdānī says (178) that it belonged to Kalb.

'Unayza is mentioned briefly by Niebuhr (*Beschreibung von Arabien*, Copenhagen 1772, 344), who describes it as situated ten days' journey from al-Baṣra. It is really only in the early 19th century, however, that accurate accounts of the area begin to appear and this as a direct result of the Turco-Egyptian operations there against the Wahhābīs. In 1816, Ibrāhīm Pasha, the eldest son of Muḥammad 'Alī, advanced against the Wahhābīs under 'Abd Allāh, son of Su'ūd, and 'Unayza and soon the rest of al-Ḳaṣīm fell to the Turco-Egyptian forces. It was to be 1849 before Turco-Egyptian influence disappeared and the area once more was incorporated into the Wahhābī state.

Doughty, who was able to spend some months in 'Unayza between April-July 1878, wrote at some length on the town at that time (*Arabia Deserta*, London 1936 ed., 357 ff., a chapter entitled "Aneyza" and one "Life in Aneyza"). He describes the town itself and its walls, the streets, the houses, the wells and water supply and the date groves around the town. He also paints a vivid picture of the life of the inhabitants, their qualities, manners and customs, their food and clothing, their religious and secular life. He emphasises the tribal nature of life in the town. Commerce was particularly well developed, and foreign as well as local merchants operated there; the town lay on the caravan route between al-Baṣra and Mecca. Doughty also mentions the artisans working in the town: agricultural labourers, masons, gold- and silversmiths and workers in fine crafts. From his account, it is clear that the town occupied an important position in the commercial and cultural life of Central Arabia. There is little information on 'Unayza after Doughty other than a few brief notes of travellers.

'Unayza is now the second town of al-Ḳaṣīm after Burayda and the area is an important agricultural centre. Apart from the production of dates, poultry, cereals and wheat are the main products.

UNITED ARAB EMIRATES [see al-imārāt al-'arabiyya al-muttaḥida, in Suppl.].

al-**UNḲALĪ, UNḲŪRIYYA** [see madjar].

'UNNĀB (a.) is the jujube, the fruit of the varieties of zizyphus cultivated in many countries with a rather warm climate, in particular *Zizyphus vulgaris* Lam. and *Zizyphus jujuba* Mill. (*Zizyphus sativa* Gaertn.), *Rhamnaceae*. Its name is connected with *'inab* because of its grape-like inflorescence and its sour-sweet taste. The synonym *zafzūf* and its diminutive *zufayzif* is probably to be derived from Greek ζίζφον. It is already found in Pliny, *Nat. hist.* xv, 14, as *zizypha*, and lives on in Spanish *azofaifa* (Dozy-Engelmann, *Glossaire des mots espagnols et portugais dérivés de l'arabe*, Leiden 1869, 228).

The most comprehensive compilation of the varieties of the jujube shrub is to be found in Ibn 'Abdūn, *'Umdat al-ṭabīb*, ms. Rabat, Bibl. Gén. 3505 D, fol. 117b, ll. 16-26 (condensed in the following): a big bush with many varieties, wild and cultivated, white and red. There are five varieties of the red jujube: the first has fruits of the size of the hazelnut, is fleshy, has small seeds and grows in the region of Granada and Algeciras; the second is known as the "mountain jujube", has fruits the size of the bean (*al-bāḳillā*), is round, has a thin skin and many seeds which have an astringent effect; the third is known as "the thorny one" (*al-shawkī*), has fruits the size of peas, with large seeds and little flesh, is found frequently in Toledo, is effective against chronic diarrhoea originating from a weak stomach, and staunches the loss of blood (*nazf al-dam*); the fourth is called *al-burdjīn* (Romance, see A. Dietrich, *Dioscurides triumphans*, Göttingen 1988, i, 92), has small fruits with a violent astringency, spreads on the ground and grows to the height of sitting (*ḳa'da*); the fifth is *al-sidr*, cf. Renaud, *Tuḥfa*, nos. 293, 302.

The fruit contains a mucous substance and serves of old in medicine as a mucilaginosum against catarrh and as tonic. The fleshy, ripe and highly sweet jujubes are considered to be the best varieties. They calm down the "boiling of the blood" (*ghalayān al-dam*) and are effective against disorders of the bronchial tubes in that they eliminate the latter's hoarseness (*khushūna*). Further therapeutic properties concern the liver, the bladder and the kidneys, and several complaints of the abdomen. The leaves, too, are therapeutic: chewed, they are effective against offensive (*al-bashī'a*, disgusting) drugs and against vomiting; crushed and sprinkled on ulcers, they are immediately effective.

(A. Dietrich)

'UNṢUR (a., pl. *'anāṣir*), a term of Islamic philosophy.

As a general term, it may be translated as "origin", "family", "race", "constituent", "ingredient". Lane provides the example of *fulān[un] karīm al-'unṣur*, "Such a one is of generous origin or race". The plural in modern Arabic may also be rendered as "nationalities". Philosophically, the word means "element" and is the equivalent of the Latin *elementum*, the Greek στοιχεῖον and its Arabic form (via Syriac) *usṭuḳuss*. It is a non-Ḳur'ānic word used to specify in Arabic the four Empedoclean elements of fire, air, water and earth. *'Unṣur* can also be translated as "matter"; thus we find that both *al-'unṣur al-awwal* and *al-hayūlā al-*

ūlā may be used in Arabic to render the Greek πρώτη ὕλη (prime matter), while *djawhar ʿunṣurī* was a useful Arabic rendition of the Greek οὐσία ὑλική, a material substance.

The word *ʿunṣur* was a commonplace in the philosophical lexicon of the early and later Arab and Islamic philosophers. For example, al-Kindī's *Rasāʾil*, collected and edited by Abū Rīda, include the following titles (tr. Atiyeh): "On the exposition that the nature of the heavens is contrary to that of the four elements" and "On that element of the four elements that has colour by nature and causes colour in the others". Of the latter *Risāla*, Atiyeh observes: "Al-Kindī maintains that the earth is the only element with colour and that the colours we see in the other elements are there due to their mixture with earth." Elsewhere, al-Kindī also uses *ʿunṣur* in the sense of "matter". Some centuries later, Shihāb al-Dīn al-Suhrawardī [*q.v.*] held that the Intellect (*al-ʿaḳl*) was "the highest element" (*al-ʿunṣur al-aʿlā*). By contrast, Ibn Rushd used the word in a way which has been variously translated as "basic principle" or "ultimate basis of existence". Thus in his commentary on the *Metaphysics* of Aristotle, we read: "Also, since a thing can be resolved into its elements, substance would sometimes be resolved into relation and relation into substance; this is necessary in the kind of thing which is basic principle (*ʿunṣur*), not in that which is form" (tr. Genequand). Also, elsewhere he observed in his *Tahāfut al-Tahāfut* that "[The philosophers] believed therefore that all active and passive bodies are composed of two natures, one active and the other passive, and they called the active nature form, quiddity and substance, and the passive part subject, ultimate basis of existence (*ʿunṣur*) and matter" (tr. Van den Bergh).

ʿUNṢUR AL-MAʿĀLĪ KAY KĀʾŪS [see KAY KĀʾŪS B. ISKANDAR].

ʿUNṢURĪ, ABU 'L-ḲĀSIM ḤASAN b. Aḥmad, Persian poet at the Ghaznawid court during the early 5th/11th century.

The external information about his life is mostly anecdotal. It is said that he was born at Balkh, became an orphan at an early age and in his youth earned a living as a merchant. A story, told in some sources, about a robbery during one of his travels was mistakingly associated with him (cf. Storey-de Blois, v/1, 234-5). His career as a poet began under the patronage of the Amīr Abu 'l-Muẓaffar Naṣr (d. 412/1021-2), the military governor (*sipahsālār*) of his brother Sultan Maḥmūd [*q.v.*] in Khurāsān, who introduced ʿUnṣurī to the sultan's court at Ghazna. Both Ḥamd Allāh Mustawfī and Dawlatshāh state that ʿUnṣurī served Maḥmūd as his *amīr* or *malik al-shuʿarāʾ* [*q.v.*], a function which included the supervision of all the poets attending the court. He was also admitted to the sultan's inner circle as a drinking companion (*nadīm* [*q.v.*]). Two particularly famous anecdotes tell how he and other poets tested Firdawsī's poetic skills (first recorded by Ḥamd Allāh Mustawfī) and how, after the favourite slave Ayāz [*q.v.*] had cut his beautiful locks, he was able to change Maḥmūd's bad mood by means of an improvised quatrain (Niẓāmī-yi ʿArūḍī, 55-7). The lavish rewards which he earned with his art made him a very rich man. He and the Sāmānid poet Rūdakī [*q.v.*] are often named together as the two most successful Persian court poets ever. A contemporary confirmation of his predominant position among the Ghaznawid court poets of the time is the eulogy which Manūčihrī [*q.v.*] wrote for him. On the other hand, his status was not entirely unchallenged, as appears from an exchange of polemic poems with Ghaḍāʾirī, another contemporary poet (cf. Riḍā Ḳulī Khān, ii, 921-9). ʿUnṣurī remained active at least till the *ʿīd al-fiṭr* celebration of 422/1031, when Masʿūd I rewarded him with a thousand gold coins (Bayhaḳī, ed. Ghanī and Fayyāḍ, 274, ed. Nafīsī, i, 329). In an elegy on the death of Farrukhī [*q.v.*], which occurred in 429/1037-8, the poet Labībī [*q.v.*] called ʿUnṣurī an old man (Rādūyānī, 32 of the printed Persian text). The dating of his death in 431/1039-40 by Dawlatshāh and Riḍā Ḳulī Khān seems therefore likely, though the year 441/1049-50 has also been mentioned by Taḳī al-Dīn Kāshānī and other *tadhkira* writers (cf. A. Sprenger, *A catalogue of the... manuscripts of the libraries of the King of Oudh*, i, Calcutta 1854, 528).

According to Dawlatshāh, ʿUnṣurī wrote 30,000 distichs. If this is a correct estimate, little more than one-tenth of his work has survived in various selections, none of which are older than the Ṣafawid period. Additionally, a number of fragments and single lines have been preserved in anthologies and sources which quote them in evidence. Notable among the latter are the rhetorical textbook *Tardjumān al-balāgha* by Rādūyānī [*q.v.*] and the lexicon *Lughat al-Furs* by Asadī [*q.v.*], both compiled in the late 5th/11th century, and the anthology *Muʾnis al-aḥrār* of Djādjarmī [*q.v.* in Suppl.]. The data concerning the textual tradition point to a changing pattern in the reception of his poetry. There can be no doubt about the great influence that ʿUnṣurī exerted on Persian court poets of the Ghaznawid and early Saldjūḳ period. But already Khāḳānī (d. 595/1199 [*q.v.*]) criticised the one-sidedness of ʿUnṣurī's panegyrics because of his neglect of the loftier themes favoured by later poets (*Dīwān*, 926-7). A further indication of the decline of his reputation is that in the *Muʿdjam* of Shams-i Ḳays (*fl.* early 7th/13th century [*q.v.*]), the *ḳaṣīdas* of Anwarī [*q.v.*], instead of those of ʿUnṣurī, have become the most important source of examples for the use of rhetorical figures. A remarkable revival occurred during the neo-classical period in the history of Persian poetry (mid-18th to mid-20th centuries) when he was appreciated again as one of major representatives of the so-called Khurāsānī style. In recent literary criticism, however, his poetry has been condemned for being too rational and adding little to the conventional imagery of the Arabic and Persian tradition (see especially, Shafīʿī Kadkanī, 526-39).

The lyrical poetry which is still extant consists

mainly of *ḳaṣīda*s and *rubāʿiyyāt*. Most panegyrics are addressed to Sultan Maḥmūd and Amīr Naṣr. Only a few poems to other patrons are known, among whom are Sultan Masʿūd I and the *wazīr* Aḥmad b. Ḥasan Maymandī [*q.vv.*]. His style shows a great dexterity in the construction of panegyrical reasonings. Several poems are structured according to rhetorical devices such as question and answer (*suʾāl wa d̲j̲awāb*) and the enumeration of qualities in pairs (*taḳsīm al-ṣifāt*). His themes are characteristic of court poetry and include the celebration of Sultan Maḥmūd's victories. ʿUnṣurī also had a reputation as a writer of anacreontic verse, specimens of which are to be found in the *nasīb*s of his panegyrics.

ʿAwfī makes mention of three romantic *mat̲h̲nawī*s dedicated by ʿUnṣurī to Sultan Yamīn al-Dawla Maḥmūd and named collectively *K̲h̲izāna Yamīn al-Dawla.* Their titles refer to the pairs of lovers featuring in them: *Wāmiḳ u ʿAd̲h̲rā*, *K̲h̲ing-but u Surk̲h̲-but* ("White Idol and Red Idol", presumably inspired by the statues of the Buddha at Bāmiyān) and *S̲h̲ād-bahr u ʿAyn al-ḥayāt.* In an inventory of his own works, al-Bīrūnī [*q.v.*] refers to translations (presumably into Arabic) made of the same three stories (*Risāla li ʾl-Bīrūnī fī fihrist kutub Muḥammad b. Ẓakariyyāʾ al-Rāzī*, ed. P. Kraus, Paris 1936, 39). No more than a few scattered lines from these romances have been preserved. However, *ca.* 1950, sheets from an old manuscript of *Wāmiḳ u ʿAd̲h̲rā* were retrieved by Mawlawī Muḥammad S̲h̲afīʿ. The Persian poem appeared to be founded on a Greek story. T. Hägg and B. Utas have identified the latter with the Hellenistic novel of Metiochus and Parthenope, which is also only preserved in fragments.

The *Dīwān* has been printed several times since the 19th century. The most recent editions were published by Yaḥyā Ḳarīb (ed. Tehran 1323 *s̲h̲.*/1944-5, ²1341 *s̲h̲.*/1962-3) and Muḥammad Dabīr-Siyāḳī (ed. Tehran 1342 *s̲h̲.*/1963, ²1363 *s̲h̲.*/1984). The latter is based mainly on *Mad̲j̲maʿ al-ḳaṣāʾid*, an anthology of *ḳaṣīda*s compiled by Taḳī al-Dīn Muḥammad al-Ḥusaynī (d. 1022/1613-4), who also wrote an introduction to the section dealing with ʿUnṣurī (cf. Dabīr-Siyāḳī, introd., *Dīwān*, ix-x; see also A. Gulčīn-i Maʿānī, *Tārīk̲h̲-i tad̲h̲kirahā-yi fārsī*, Tehran 1348 *s̲h̲.*/ 1969, i, 554-5).

(J.T.P. de Bruijn)

ʿUNWĀN (a., pl. *ʿanāwīn*), originally means "trace, sign, indication", from one of the senses of the root *ʿ-n-w* "to show, set forth a thing" (Lane, 2178-9), but it has come to denote the address or superscription at the head of a document.

1. In correspondence and diplomatic

Here it denotes the direction or address, part of the introduction of a document. See for this diplomatic and inshāʾ, and add to the *Bibls.* there *EIr*, art. *Alqāb va ʿanāwīn*, esp. ii. *ʿAnāwīn* (A. Ašraf).

2. In manuscript production

Here it is commonly used for the title of a composition and is thus one of the terms used for an illuminated frontispiece or headpiece, with or without the title of the book inscribed in it. According to various Arabic and Persian sources, the other technical terms used are: *tard̲j̲ama*, *ṭurra*, *ṭug̲h̲rā*, *sarlawḥ*, *dībād̲j̲a*, *s̲h̲amsa* and *turand̲j̲*. However, there is no consensus as to the exact meaning of some of these terms. Apart from *s̲h̲amsa* and *turand̲j̲*, which are medallions of round (circular) or oval shape, the other terms may refer to any type of illumination preceding the main text or a section of it. Thus Akimushkin and Ivanov use the term *ʿunwān* for the illumination of the upper part of fol. 1b and *sarlawḥ* for the entire page, whereas for B.W. Robinson, *ʿunwān* is an illuminated one- or double-page opening, and *sarlawḥ* confined to the upper part of the page.

A composition or text begins, in the large majority of Arabic, Persian and Ottoman Turkish manuscript codices, on the verso of the first folio. In those manuscripts copied for regular scholarly use, the recto of the first folio (known as *ẓahr* or *ẓahriyya*), as well as the wide upper margin of the verso, were usually left blank. This seems to have been a practice taken over from the preparation of documents. Since titles of works were often embodied in the introductory matter or preface of compositions and not infrequently rubricated, there was less need to repeat this information anywhere else. Nevertheless, these two large blank areas in the codex often "begged" to be filled in with writing and decoration. Decorated titles, located in various forms of frontispieces, began to appear most probably in the 5th/11th century and were limited to de luxe copies produced for wealthy private patrons and for major (usually royal) libraries. One of the earliest known illuminated headpieces carrying the title of the book can be found in a copy of *Kitāb K̲h̲alḳ al-Nabī wa-k̲h̲ulḳih* (Leiden Univ. Library, no. 437) executed for the G̲h̲aznawid *amīr* ʿAbd al-Ras̲h̲īd (r. ?440-3/?1049-52). The decoration in these "secular" manuscripts was modelled on the illumination employed in the production of copies of the Ḳurʾān and consisted of geometric, including architectural, and vegetal motifs. The earliest inscription encountered in frontispieces of illuminated Ḳurʾāns is *innahu la-Ḳurʾān Karīm* (LVI, 77). It is most probably this title-inscription which lies at the origin of illuminated titles in non-Ḳurʾānic codices.

The study of the non-figurative illumination of non-Ḳurʾānic manuscripts has been greatly neglected in comparison with the study of painted illustrations. Apart from the work of R. Ettinghausen and, later, Akimushkin and Ivanov (see below), no other systematic study has yet been done in this field, even though most major collections of Islamic manuscripts would count a sizeable number of illuminated pieces among them. Hence e.g. the collection of some 390

Persian manuscripts in the Bibliothèque Nationale in Paris, as described by F. Richard (see below), has 89 illuminated manuscripts from the 7th/13th to the 11th/17th centuries. Among them there are six medallions, nine double-page illuminations and 74 codices having one or more headpieces (*sarlawḥ*). In 28 cases the titles appear in the illuminated pieces. Except for one case involving a medallion (no. 14), all the other titles are inscribed in cartouches within headpieces. In 18 cases the inscription in the cartouche is the *basmala* [*q.v.*] or some other invocation.

From an analysis of the above and other collections, three major types of illuminated decorations which carried the title of the book there emerge:

1. "*Title-page*" *illumination* (fol. 1a). Here, several varieties are known:

(a) A large rectangular panel, composed of several constituent pieces (occupying most of the page). It is divided into an upper piece; a medallion or rosette occupying the centre; and a bottom piece, although the latter is not always present. The title, in most cases, is placed in the upper piece but sometimes in the medallion. The medallion is more often used as an ex-libris, usually beginning with the expression *bi-rasm* (i.e. "on the order of, for") or it contains the authorship statement. The rectangular panels occupying the large part of the front page (fol. 1a) were very popular from the 7th/13th to the 9th/15th centuries in Egypt, Syria and Turkey, and Persia. Some of the best examples of this type of illumination are illustrated in al-Munadjdjid's work (see *Bibl.*). In Maghribī manuscripts, the full-page panel carries the *basmala* and *taṣliya* (upper portion) and the *ḥamdala* [*q.v.*] and *taṣliya* (lower portion), the centre (usually a medallion) being occupied by the title or statement of authorship (*ḳāla fulān ibn fulān*).

(b) Various geometrical forms usually occupying the upper part of the page. Here we find a square or rectangular panel(s) enclosing the title and often the author's name, or an upper panel on its own or with a medallion underneath.

(c) A medallion of a circular or oval form, often with pendants and scalloped edges or a pointed star, on its own.

2. *Double-page opening illumination* (fols. 1b-2a). In most cases this consists of identical decorations arranged symmetrically. Here the title is inscribed in the inside (cartouche) of the headpiece or the upper panel.

3. *A headpiece* (fol. 1b) *above the text proper*, surrounded by a frame or a thick rule-border running down the page to enclose the text. Headpieces were executed in a variety of shapes and sizes. Here we encounter e.g. one or two rectangular panels placed one above the other, a rectangular panel with a decorative band above or a rectangular panel surmounted by triangular, W-shape and dome (semi-circular) pieces. Often the cartouche within the panel is left blank or carries the *basmala* or some other inscription in the form of an invocation. In Maghribī manuscripts, the *basmala* and *taṣliya* are inscribed in the upper part of the piece, above the main panel or cartouche, while the cartouche proper carries the statement *ḳāla fulān ibn fulān*.

As regards the colour spectrum of illuminated titles, we find that characters in gold, often outlined in black ink, predominate. Other pigments, such as e.g. white, contrasting with a blue, red or even green background, were also often used. The scripts employed for this purpose were either Kūfic (often stylised and floriated), or *thuluth*/*tawḳīʿ*-based. Illuminated titles in Maghribī manuscripts were calligraphed almost invariably in the so-called *al-khaṭṭ al-mashriḳī*.

2. Literary aspects of book titles

During the first four Islamic centuries, the titles given to Arabic literary products (books and briefer treatises, henceforth "books") tend to be matter-of-fact to the point of clumsiness; cf. the many thousands of items listed in the indices of Sezgin, *GAS*. With books from this early period, generally preserved only in later manuscripts, the title may be a later addition; accordingly, we cannot be sure at what time it became customary to provide books with titles. That at first a title was not considered indispensable is witnessed by the fact that Sībawayh's all-important grammar of Arabic produced towards the end of the 2nd/8th century has never received a title, being simply designated as *Kitāb Sībawayh*. It must also be remembered that, even for later times, it is often impossible to decide whether a book title was chosen by the author or added by a later scribe, because the mention of the title in the body of the book (especially in the preface, if there is one) is, although not uncommon, by no means the rule (and autographic manuscripts are rare exceptions). Also, it is of very common occurrence that manuscripts of one and the same book bear different titles, in which case all, or some, or none, may go back to the author.

Soon after the re-emergence, in the middle of the 4th/10th century, of rhymed prose (*sadjʿ*) as the principal formal means of embellishing prose texts, it became standard procedure to provide a book with a title exhibiting at least one instance of rhyming. These rhymed book titles never totally replaced unadorned prose titles, but became so common that they may be considered as typical. The popularity of providing books with rhymed titles began to wane only during the 19th century; at present this usage has become obsolete, albeit not wholly extinct.

The information given below stems from a survey of 1,690 titles culled from Brockelmann (all subsequent page numbers refer to Brockelmann, II) belonging to the 5th-12th/11th-18th centuries; cf. A. Ambros, *Beobachtungen zu Aufbau und Funktionen der gereimten klassisch-arabischen Buchtitel*, in *WZKM*, lxxx (1990), 13-57.

The syntactic structure of the title is almost invariably that of a noun-phrase or a series of noun-phrases linked by *wa-* "and" (e.g. *Mūḳid al-adhhān wa-mūḳiẓ al-wasnān* "Kindler of the intellects and awakener of the sleeper", 30), into which prepositional phrases are frequently embedded (e.g. *Iʿlām al-sādjid bi-aḥkām al-masādjid* "Information of the prostrate concerning the rules of the mosques", 112). Extremely common (found in more than half of the titles surveyed) is the case of a dichotomous title consisting of two noun-phrases,

the latter of which is dependent on the preposition *fī* "concerning, about". In this case the two phrases are semantically and syntactically independent, the second phrase forming a sort of subtitle (so that *fī* must by no means be misunderstood as "in"). While the second phrase gives an indication of the subject matter of the book, the first phrase, the title in the narrower sense, is meant to generate, by mentioning things that are beautiful, pleasant, valuable, or helpful, a positive feeling towards the book, thereby enhancing its "image" and publicity. Three examples: *al-Djawāhir al-muḍiyya fī ṭabaḳāt al-Ḥanafiyya* "The brilliant jewels: about the classes of the Ḥanafīs" (97), *Ḳaṭr al-sayl fī amr al-khayl* "Droplets of the torrent: about the matter of racing horses" (88); *al-Djawhar al-fard fīmā yukhālif fīh al-ḥurr al-ʿabd* "The unique jewel: concerning the differences between freeman and slave" (119). The leading phrases, and especially their head-nouns, tend to become stereotyped (in the survey, the two most popular head-nouns were found to be *durr* "pearls" with 59 occurrences and *tuḥfa* "gem" with 49). The titles tend to be rather short, the average number of nouns in the titles surveyed amounting to 4.75. Of course, the various rhetorical devices employed in poetry and rhymed prose (such as *muwāzana, djinās, tarṣīʿ, iltizām*) are all commonly found in rhymed book titles.

Bibliography: The Arabic book title has so far been very little studied. In addition to the survey mentioned above, see A. Carmona González, *La estructura del título en los libros árabes medievales*, in *Estudios Románicos*, iv (1987-9), 181-7.

(A.A. Ambros)

ʿUNWĀN, MUḤAMMAD RIḌĀ, also known by his surname Čalabī, 17th century Persian poet, died probably between 1078/1667 and 1083/1672. Luṭf ʿAlī Beg Ādhar, in his *tadhkira*, includes the poet among those of Ādharbāydjān, and refers to him as a native of Tabrīz (*Ātashkada*, i, ed. Ḥasan Sādāt Nāṣirī, Tehran 1336/1957, 132). Muḥammad Ṭāhir Naṣrābādī reports having met ʿUnwān in Mashhad, where the latter's father, Muḥammad Ṣāliḥ Tabrīzī, a wealthy individual, had sought residence (*Tadhkira-yi Naṣrābādī*, ed. Waḥīd Dastgirdī, Tehran 1361/1982, 396-7). Not much is known regarding ʿUnwān's life except that towards the end of his life he gained nearness to Dhu 'l-Faḳār Khān, governor of Ḳandahār. He died at that place; his body was transferred to Mashhad, and buried there in the vicinity of Imām Riḍā's mausoleum.

Reports indicate that ʿUnwān left behind a collection of poems containing some 5,000 couplets. However, Gulčīn-i Maʿānī, who has made a study of the poet's manuscripts, expresses his inability to find a complete copy of his poems (*Nashriyya-yi Dānishkada-yi Adabiyyāt-i Tabrīz*, xi/4 [1338/1969-70], 402-3). In his poetic style, ʿUnwān seems to have been influenced by Ṣāʾib, whom he praises in some of his verses, and who is said to have met him in Mashhad.

Bibliography: Given in the text, but see also Muḥammad ʿAlī Tarbiyat, *Dānishmandān-i Ādharbāydjān*, Tehran 1314/1935-6; ʿAzīz Dawlātābādī, *Sukhanwarān-i Ādharbāydjān*, Tabrīz 1355/1976; Muḥammad Dayhīm, *Tadhkira-yi shuʿarā-yi Ādharbāydjān*, ii, Tabrīz 1367/1988-9. (Munibur Rahman)

URA-TUBĀ [see Suppl.].

ʿURĀBĪ PASHA, Aḥmad, Egyptian nationalist leader and army officer, d. 1911. He was born in 1841, the son of an Egyptian *shaykh*. He entered the Cairo Military Academy in 1854, and after graduating, rose to the rank of colonel (*ḳāʾim-maḳām*), being the first native Egyptian to reach that rank. He served in several capacities in the army and took part in the Egyptian campaign in Abyssinia in 1875.

In Egypt, the Khedive Ismāʿīl [see ismāʿīl pasha] was leading the country into bankruptcy with his profligate ways. A number of army officers formed a group to rally round and express their discontent with the Khedive. ʿUrābī probably supported (if not joined) them. In his memoirs, he certainly writes of Ismāʿīl knowing of their discontent and of his taking measures to combat it. The aim of the group was to destroy foreign influence in Egypt and to further their interests in the army. In February 1879 army officers protested to the Minister of Finance with a demand for the reinstatement of their pay which had been halved.

Ismāʿīl was succeeded by Tawfīḳ [see tawfīḳ pasha] in June 1879. The situation was critical for Egypt. The country was declared insolvent, the Assembly was seeking greater powers and the army was discontented. The history of the next two years is of a struggle between the Khedive, civilian politicians and the army with the European powers as virtual arbiters. The army under ʿUrābī gradually became stronger and more extreme in its demands. Tawfīḳ was in a weak position and sought to bolster his authority by appointing a strong Prime Minister, Riyāḍ Pāshā, who had served under Ismāʿīl.

Members of the Assembly held secret meetings with ʿUrābī and others opposed to Tawfīḳ, and in November they issued a manifesto which demanded more control over the Khedive and the curbing of European influence. Tawfīḳ opposed these demands and hit back at the army by limiting military service to four years. The ʿUrābī faction took this as an attack on their promotion prospects and demanded the dismissal of the War Minister, ʿUthmān Rifḳī, a Circassian who, they believed, was working against them. In his place they wanted Maḥmūd Sāmī al-Bārūdī [*q.v.*], an ambitious Egyptian officer who was willing to support ʿUrābī. Tawfīḳ dismissed the army demands and in February 1881 ordered the arrest of the rebellious leaders. The army, on learning of this, and whilst ʿUrābī and two other colonels were being court-martialled, stormed the Ministry of War and released their officers. The Khedive was forced to dismiss Rifḳī, and al-Bārūdī became Minister of War. He tried to satisfy army demands—more pay, better promotion prospects—but by now some of the troops had become too rebellious to control. They mutinied in Alexandria in July and al-Bārūdī was sacked. Army unrest grew, and a large demonstration was organised in September to put new demands before Tawfīḳ.

ʿUrābī led this movement, claiming that he was acting as a national leader. Tawfīḳ gave in, Muḥammad Sharīf returning as Prime Minister with al-Bārūdī as War Minister with ʿUrābī as his deputy. ʿUrābī continued to agitate against the policies of Sharīf, and was virtual spokesman for a national revolution against the Khedive and European influence, addressing crowds and threatening to use force to achieve the nation's goals. Sharīf tried to bolster the authority of the government, but a joint Anglo-French note of January 1882 assuring the Khedive of their support worsened the situation. It annoyed the army nationalists who, with ʿUrābī at their head, were strong enough to outface the Khedive. Sharīf was dismissed and al-Bārūdī was appointed Prime Minister with ʿUrābī as War Minister. Together they forced through army promotions and began the attempt to remove European influence from Egypt. The rift between Tawfīḳ and ʿUrābī widened. Britain and France demanded that

the latter be dismissed and threatened to send a naval fleet to guarantee the Khedive's safety.

ʿUrābī and the Egyptian government resigned in protest against Tawfīḳ's reliance on Europe. ʿUrābī and his troops surrounded the ʿAbdīn Palace and successfully demanded that ʿUrābī be re-appointed as War Minister. Tawfīḳ felt so threatened that he left for Alexandria and the protection of the European fleet, and ʿUrābī assumed virtual control of the country as the leader who, it was hoped, would expel the foreigner from Egypt. Riots broke out in Alexandria, and Britain demanded that measures be taken to protect both its citizens and the Khedive, insisting also that ʿUrābī be dismissed. The Khedive resisted these demands and was accused by the British of not taking strong enough measures to calm the situation in Alexandria. In July 1882 the British fleet bombarded the city; ʿUrābī ordered mobilisation and attempted to depose the Khedive.

The British occupied the city and saved Tawfīḳ, who ordered the dismissal of ʿUrābī, who was attempting to raise the Egyptians against the British and the Khedive. The Egyptian army was no match for British troops, who quickly occupied Ismāʿīliyya and crushed ʿUrābī and his forces at Tall al-Kabīr in September 1882. ʿUrābī surrendered and was put on trial for treason against the Khedive, found guilty and exiled to Ceylon. He was allowed to return to Egypt in 1901 but took no further part in politics, and died in obscurity in 1911.

He is now regarded in Egypt as the first of those native Egyptian leaders (with Saʿd Zaghlūl [*q.v.*] and ʿAbd al-Nāṣir [*q.v.* in Suppl.]) who opposed the foreign occupation of their country.

URAL RIVER [see yayïḳ].

URDJUDHŪNA, also Urshudhūna (with variants: Ardjudhūna, -idhūna, Arshidhūna, etc.), a town and mountain stronghold (see Lévi-Provençal, *Hist. Esp. mus.*, ii, Pl. II) in al-Andalus. It corresponds to the modern Archidona (lat. 27° 06' N., long. 4° 23' W.) in the province of Malaga and is situated some 37 km/22 miles to the north of the provincial capital Malaga, near the source of the Guadalhorce and between Antequera and Loja on the Río Genil. Its pre-Islamic name, said by Simonet (p. 124) to derive from *Esteleduna*, meaning "olive-oil factory" (an Iberian word?), is still not known for certain.

It was in 92/711, shortly after their invasion of Spain that the Muslims took Archidona and, possibly for good strategic reasons, made it their capital of the mountainous province of Rayya (or, as some have it, Rayyu), a region roughly corresponding to the modern province of Malaga [see mālaḳa]. Almost two centuries later, it played a significant part in the rebellions fomented by the *muwallad* ʿUmar b. Ḥafṣūn [*q.v.*], leader, from his headquarters in the stronghold of Bobastro [see bubashtrū, in Suppl.], of Andalusian resistance to the Umayyads of Cordova from 267/880 until his death in 305/917, when it fell to his sons to pursue his cause in a struggle that ended only with the surrender of Bobastro to ʿAbd al-Raḥmān III on 21 Dhu 'l-Ḳaʿda 315/17 January 928.

From the effects of the great Andalusian rebellion Archidona never fully recovered. It was to lose its status as provincial capital to the expanding and increasingly prosperous Malaga, which duly regained the importance it had enjoyed before the advent of Islam.

In later times as the boundaries of al-Andalus receded, Archidona came to serve a new purpose as a frontier fortress (*ḥiṣn*) in the Naṣrid kingdom of Granada [see naṣrids]. From this period there survives an interesting legal instrument dated 856/1452, making the inhabitants of the fortresses beneficiaries of a *waḳf* (Seco, 12-14). Be that as it may, on 30 September 1462 Archidona was taken by Don Pedro Girón, Grand Master of the Order of Calatrava, and thereafter remained—at times uneasily—in Christian hands.

URDJŪZA [see radjaz].

URDŪ, the premier language of Islamic religious and cultural expression in modern South Asia. In its contemporary significance in the wider Islamic world, it may be ranked immediately after Arabic and English. Urdū is the national language of Pākistān and it has official status under the eighth schedule of the Constitution in India, the home of the majority of its native speakers. Its great geographical range is now extended to the South Asian diaspora, notably in Arabia and the Gulf states, in the United Kingdom and in North America. The first part of this article traces the peculiarly complex historical evolution and current sociolinguistic situation of Urdū, then outlines some features of the language most likely to be of interest to Islamicists. The second part is intended to supplement previous articles on individual genres and authors by providing a summary overview of Urdū literature, whose main phases of development are characterised with reference to leading authors and the defining genres of belles-lettres.

1. Language

Urdū is most simply defined by its combination of a vocabulary very extensively derived from Persian and Arabic with a linguistic base which is firmly Indo-Aryan in terms of its core word-stock as well as its phonology, morphology and syntax.

This combination clearly owes its genesis to the peculiar circumstances of the Muslim dominion over the Indian subcontinent, which was both profound and long-lasting without ever completely attaining either religious or linguistic hegemony. Urdū may be said, however, to have become fully self-defined only when this dominion was eventually ended by the British conquest of India, resulting in the most sustained exposure of any part of the *dār al-islām* to Western colonial rule. It was then that the constellation

of forces between the colonial state, the Muslims of South Asia and the majority Hindū population had profound linguistic as well as political effects. These have endured since 1947 and continue to shape the profile of Urdū in Pākistān and in independent India. Modern definitions of Urdū and understandings of its history are consequently liable to be confused by the partisan views characteristically associated with language issues in modern South Asia, particularly when, as in this instance, these are intimately related to questions of religious identity. Besides these factors and the difficulty of assembling and analysing the necessary textual materials, the need for further caution is signalled by the inconsistency with which overlapping labels are applied to overlapping varieties of language, in particular to the highly-charged modern distinction between Urdū and Hindī [*q.v.*].

Throughout the period of Muslim rule in South Asia, the principal written standard language was Persian, with the numerous Indo-Aryan languages [see HIND. iii. Languages] having rather restricted literary functions, typically as vehicles of popular religious verse. Little concerned with distinctions between the genetically related indigenous languages of North India, most Muslim writers were content to refer to them simply as "Hindī" or "Hindawī", i.e. "Indian" as opposed to Persian (or Arabic). These labels are used indifferently not just for varieties of language which would now be described as early forms of Urdū or Hindī, but also for others which are clearly different, e.g. Pandjābī or Rādjasthānī. Contemporary terminology is thus no guide to mediaeval linguistic realities, which must be reconstructed largely by supposition from such evidence as is available. Fragments of speech embedded in Ṣūfī *malfūẓāt* and other Persian texts from northern India are usually much distorted by the scribal tradition, but are sufficient to support the commonsense inference from historical data that the Muslim conquests had brought into being a spoken *lingua franca* which incorporated many Persian loanwords and was probably based chiefly on the Kharī bōlī dialect of the Dihlī region. Although this language later achieved some literary currency in the popular verse of the *nirgun bhakti* tradition of Kabīr [*q.v.* in Suppl.] and Nānak [*q.v.*], it was otherwise largely disregarded before the 18th century in northern India. The courtly literature produced under Mughal patronage was chiefly in Persian, but also included the cultivation of "Hindī" poetry in the then fashionable Bradj bhāshā, distinguished where necessary as "Bhāk(h)ā".

The situation was, however, quite different in the Dakhan [*q.v.*], where the conquests of the Dihlī Sulṭāns [see DIHLĪ SULTANATE] in the early 14th century had established a Muslim colonial presence in the linguistically alien territory of Telugu and other Dravidian languages. This presence found its linguistic expression in the successor states of the Bahmanī kingdom, at Bīdjāpūr under the ʿĀdil Shāhīs (895-1097/1490-1686 [*q.v.*]) and at Golkonḍa under the Ḳuṭb Shāhī dynasty (918-1098/1512-1687 [*q.v.*]). As a clearly deliberate cultural policy, these rulers patronised not only Persian letters but also the production of an extensive literature in the language of (northern) India, then usually termed "Hindī", but which is normally distinguished by modern authorities as "Dakhinī" (in Urdū more usually written "Dakanī"). This largely poetic literature in Classical Dakhinī Urdū (CDU) provides most of the available direct evidence for the earlier history of the language. This evidence is not altogether straightforward, since CDU is attested in a wide range of texts dating principally from the 17th century (although including significant earlier examples), whose language is far from being fully systematic in orthography and is distinguished from later varieties of Urdū both by archaisms and by innovations peculiar to itself.

The quite broad dialectal base on which CDU collectively rests has also permitted the development of theories, usually perceived to carry a more or less explicit modern contemporary relevance, which suggest a more westerly origin for this older Urdū than the Kharī bōlī which underlies the modern standard. Thus the relative prevalence of forms cognate with modern Pandjābī encouraged Shērānī to suggest that Urdū could be dated back to the settled Muslim military presence first established in northern India by the Ghaznawids of Lāhawr. This theory naturally continues to enjoy considerable popularity in Pākistān, from whose territory it suggests the national language first sprang, whereas in India greater favour is given to Masʿūd Ḥusayn Khān's later suggestion of an origin in Hariyānawī, a geographical compromise between Pandjābī and Kharī bōlī which does more convenient justice to the variety of the CDU evidence. But modern dialect studies are not always sufficiently precise to support any definitive explanation of Urdū origins, and the task is further obscured by the phonetic imprecision of the Perso-Arabic script and by the scarcity of critically edited texts in CDU or in other relevant literary traditions.

The conquest of the Dakhan under Awrangzīb (r. 1658-1707) was followed around 1700 by a major literary and linguistic shift away from the poetry in CDU cultivated alongside Persian in Bīdjāpūr and Golkonḍa. The Mughal court now for the first time itself became the centre of a poetic literature in Urdū. This northern Early Modern Urdū (EMU) is sometimes referred to as "Hindī" by the writers of the late Mughal period, but they more commonly term it "Rēkhta" (i.e. "mixed [language]"). It is only later that the term "Urdū" itself first comes to be used as the name of the language, as a shorthand for the earlier *zabān-i urdū-i muʿallā* "language of the Imperial Camp" (< Turkish *ordu*), the first such attested use being in a verse of Muṣḥafī (1750-1824 [*q.v.*]), *kahēn kis munh sē ham ay Muṣḥafī urdū hamārī hay* "How can I dare to assert, Muṣḥafī, that Urdū is my language?", Bailey, 1938, 3). Cultivated first in Dihlī, then also in Lakhnaʾū (Lakhnaw), capital of the Nawwāb-Wazīrs of Awadh, Urdū came increasingly to replace Persian as the preferred vehicle for courtly poetry, doubtless in part as a nativist reaction to the devastation wrought by the Persian-speaking Nādir Shāh and his successors. The concern of the early apologists for Urdū as a poetic medium seriously able to rival Persian, like the influential Khān-i Ārzū (d. 1756), had the paradoxical effect of bringing it into closer line with the latter. Nevertheless, the EMU of 18th-century poetry, although considerably closer than CDU to the modern standard, shows a number of archaic features and others now regarded as vulgarisms as the result of their successful proscription by later linguistic purists (see further under 2. below). These more extreme Persianising trends reached their apogee in early 19th-century Lakhnaʾū under the poet Nāsikh (d. 1838 [*q.v.*]) and his contemporaries. Thus by the time of the collapse of the Kings of Awadh in Lakhnaʾū in 1856 and of the vestigial Mughal court in Dihlī in 1857, a standardised literary language had become fully established in poetry, and was also beginning to be used alongside Persian in prose belles-lettres.

This was also the initial period of establishment of British rule in northern India after the victories at Plassey (1757) and Baksar (1764). While the East India Company's legalistic exercise of executive power (*dīwānī*) on behalf of a titular Mug͟hal sovereign was accompanied by a continuing use of Persian as the language of official record until 1837, the practicalities of direct administration demanded the use of a *lingua franca*. It was "Hindustānī" [*q.v.*], the preferred British name for Urdū, which came to fulfil this role as the spoken language of the Mug͟hal aristocracy and service classes with whom British officials had most dealings. The latters' needs were catered for both by native instructors (*muns͟hī* [*q.v.*]) and by European language teachers, of whom the best known was John Borthwick Gilchrist, author of a Hindustānī dictionary (1787-90) and grammar (1796) before a brief but influential official appointment as principal of Fort William College in Calcutta (1800-4), where he sponsored a series of translations from Persian into an easy Urdū suitable for elementary textbooks which long remained in use in British India.

When Persian was removed from official use after 1837, its place in the law courts and government offices came to be taken by Urdū over much of the Bengal Presidency, including Bihār, the North-Western Provinces later joined with Awadh as the United Provinces (U.P.), together with the Pand͟jāb after its conquest in the 1840s. Urdū thus came to play a central role in the workings of the colonial state, and a continual stream of textbooks and grammars written in English besides bilingual Urdū-English dictionaries (culminating in Platts, 1884) serviced this role, which was crucial in fully fixing the character of Modern Standard Urdū (MSU) as it entered its heyday in the later 19th century. With the abolition of the major Muslim courts, Urdū came to be increasingly identified with the traditional urban service classes, including both the educated Muslim *as͟hrāf* [see s͟harīf] and those Persianised Hindūs closely identified with them in culture, notably the scribal caste of Kāyasths and certain Brahmin groups. The strong economic interests of these groups in preserving the official status of Urdū came, however, to be challenged with increasing success by the protagonists of Modern Standard Hindī, a language consciously evolved from exactly the same linguistic base as a mirror-image rival to Urdū which would be true to Hindū cultural tradition in using the Nāgarī script and Sanskritic vocabulary. This pressure resulted in the official replacement of Urdū by Hindī in Bihār (1880) and the accord of equal status to both in U.P. (1900), leaving Urdū unchallenged only in the Pand͟jāb.

Concomitant with the vigorous development during these decades of journalism and modern literary styles, the growing strength of this challenge from Hindī provoked the Muslim leaders of northern India into an increasingly explicit association of religious and linguistic identity. A particularly important role in this identification of the Urdū cause with that of Islam was played by the modernist Sayyid Aḥmad K͟hān (1817-98 [*q.v.*]), under the auspices of whose followers the And͟juman-i Taraḳḳī-yi Urdū came into existence in 1903. Under its leader Mawlawī ʿAbd al-Ḥaḳḳ (1870-1961), whose tireless achievements earned him the deserved sobriquet "Bābā-yi Urdū", it became the leading organisation devoted to the promulgation of Urdū in British India. ʿAbd al-Ḥaḳḳ was also associated with the patronage of Urdū by the Niẓām of Ḥaydarābād, where Urdū was the official language of the state and was for the first time developed from 1918 as a medium of higher education at ʿUt͟hmāniyya University. Like all subsequent attempts to develop the language in India and Pākistān, this initiative relied heavily on loans and coinages from Arabic and Persian, since the sociolinguistic situation of Urdū in South Asia largely precludes the exploitation of native word-building resources on the model of modern Turkish or Persian.

Despite the further expansion of Urdū in the last years of British India into the new media of films and radio, the partition of 1947 proved to be a severe reversal for its cause in India, where its position was much weakened by the emigration of many Urdū-speaking Muslims to Pākistān. As the national language, Hindī has been actively promulgated at the expense of Urdū in the latter's historical areas of strength in Bihar and Uttar Pradēs͟h, with the result that many younger Urdū-speaking Indian Muslims are literate only in Nāgarī. Urdū has full official status as a state language only in D͟jammū and Kas͟hmīr. The 1981 Census records 35 million speakers (5% of the total population), sufficient to constitute the largest linguistic minority as against the majority Hindī in Uttar Pradēs͟h (11 million: 10%) and Bihār (7 million: 10%), to Marāthī in Mahārās͟htra (4 million: 7%), and to Telugu in Andhra Pradēs͟h (4 million: 8%), where modern Dakhinī continues to be spoken as the urban colloquial most different from MSU norms.

In Pākistān, the position of Urdū has been defined by its unresolved relationships with English, which it has yet fully to displace as an élite language, and by the claims of the country's indigenous languages. Before Banglādēs͟hī independence in 1971, Urdū had been first displaced as the sole national language by prolonged pro-Bengālī agitation, but Urdū had been imposed as the official language of the whole of West Pākistān since 1954. At the national level its status as a medium of administration and education was enhanced under the Islamicising regime of Zia (Ḍiyāʾ al-Ḥaḳḳ, 1977-88 [see ziyā al-ḥaḳḳ]), which further encouraged its development through such initiatives as the establishment in 1979 of the National Language Authority (*Muḳtadira Ḳawmī Ẕabān*). Urdū is, however, a learned second language for most Pākistānīs other than the Urdū-speaking migrants (*muhād͟jirūn*) from India and their descendants, who numbered only 7 million in 1981 (some 8% of the total population), chiefly settled in the cities of Sindh, especially Karāčī, where they form a majority (54% in 1981). While this continuing diglossia between spoken and formal languages remains largely accepted in the Pand͟jāb, where it has had important effects on the developing character of the local languages [see lahndā; pand͟jābī], ethno-linguistic tensions have surfaced elsewhere, particularly between Urdū and Sindhī [see sind. 3 (a)].

Peculiar therefore both in its unique relationship to Hindī and in being now chiefly cultivated as the national language of a country other than that inhabited by most of its native speakers, Urdū is also more fixed in its standard form than most South Asian languages with their proliferation of regional dialects. Regional deviations from the standard language of educated native speakers, the proudly self-proclaimed *ahl-i ẕabān*, the MSU for which Dihlī usage is the traditional standard, are generally quite minor, e.g. the treatment of the infinitive-gerundive in *-nā* as invariable in the rival Lakhnaʾū standard, or the preference among Pand͟jābī speakers for the subjunctive over the imperative in *-iyē*. The greater divergence of Dakhinī in such characteristic features as its avoidance

of the ergative construction and weak marking of the feminine gender can be attributed to the prolonged diglossia with Telugu. In contrast to MSU with its high awareness of Perso-Arabic norms, uneducated Urdū speech everywhere naturally displays a higher proportion of South Asian linguistic features, e.g. in the avoidance of final consonant clusters (thus *ʿilam* "knowledge" for MSU *ʿilm*).

Since its phonetic repertoire and its script are generally recognised by its speakers as being the chief defining characteristics of Urdū in South Asia, these two features deserve a summary profile here. The Urdū vowel system is of the familiar North Indian type with the same ten members as pre-modern and Indian Persian, viz. *a ā i ī u ū ē ay ō aw*, with phonemic contrast between simple and nasalised long final vowels. But it is the consonants which provide the main shibboleths of Urdū. Aspiration and voicing distinguish the four members of the basic Indo-Aryan five-term set, written as velar *k kh g gh*, palatal *č čh dj djh*, retroflex *ṭ ṭh ḍ ḍh*, dental *t th d dh*, labial *p ph b bh*. The chief phonetic distinction between all cultivated registers of Urdū and most other South Asian languages is the careful distinction in pronunciation of the fricatives *kh gh z* (= written *dh ḍ ẓ*) *f*, originally loan-phonemes from Persian and clearly distinguished in the script, so that strict observance of the contrasts *kh/kh gh/g z/j f/ph* (also *sh/s*), though seldom phonemically crucial, is an important sign of educated Urdū speech. A further shibboleth is provided by the loan-phoneme *ḳ*, both in Arabic words and in others of Turkish origin adopted through Persian, e.g. *ḳulī* "porter". This is carefully distinguished in the cultivated Urdū of northern India as a voiceless uvular plosive in phonetic contrast with *k*. But the contrast is lost in many other educated regional pronunciations, so graphic *ḳ* in words of Arabic or Persian origin is pronounced as *k* in the Pandjāb and most of Pākistān, as *kh* in the modern Dakhinī of Ḥaydarābād.

While older manuscripts attest the original use of the unmodified Persian script to write Urdū, a series of additional signs and other adaptations introduced from the 18th century onwards have resulted in the modern orthography, which has become fully standardised since the early 20th century. Three new letters are added to the Persian alphabet to represent the retroflex set *ṭ ḍ ṛ*. Placed alphabetically after *t d r* respectively, these letters are distinguished as a set by the use of the same diacritic over the base forms, long standardised as a small superscript *ṭ* (formerly either four superscript dots arranged in a square, or a horizontal line above two superscript dots). Graphic variants of three other letters have been evolved to denote different phonetic values. Final *n* is written without its dot to indicate nasalisation of the preceding vowel (called *nūn ghunna*, here transcribed *ñ*), thus *māñ* "mother" versus *mān* "pride". In most styles of Urdū writing, distinctive use is made of two forms of the letter *h*, the antepenultimate letter of the Urdū alphabet, where it is placed between *w* and *hamza*, which like written *ʿayn* has no independent phonetic value in Urdū. The independent aspirate is indicated by the straight form of *h* with subscript hook (*shōsha*), while the curled form (called *dōčashmī hē*) is used to denote the aspirate consonants *bh ph th ṭh djh čh*, etc., which are single phonemes in the language and are written as distinctive single consonants in the Nāgarī alphabet. Thirdly, while there is no agreed convention for distinguishing *ū* from *ō*, or medial *-ī-* from *-ē-*, the normal form of final *y* is reserved for representation of final *-ī*, while final *-ē* (also final *-ay*) is represented by a variant form of *y* with straight reverse stroke (called *baṛī yē*), thus enabling the distinction in writing of the important grammatical contrast between masculine plural *-ē* and feminine *-ī*, e.g. *aččhē laṛkē* "good boys" and *aččhī laṛkī* "good girl". Since the Persian *iḍāfa* is normally pronounced as *-ē* in Urdū, it is written with this *baṛī yē* after final *-ā* and *-ū*.

Urdū handwriting styles are typically based upon Persian *nastaʿlīḳ*. Though formerly also widely used for both official and informal purposes, *shikasta* has become obsolete over the last fifty years. The introduction of hot metal printing into India in the early 19th century was followed by the British-sponsored production of numerous Urdū textbooks and other printed materials in *naskh*-based types. This style was, however, never to find the same level of favour as it quickly attained in the Middle East for the printing of Arabic, Turkish or Persian. Most Urdū publishers and readers have continued to prefer *nastaʿlīḳ*, traditionally reproduced lithographically from the calligraphy (*kitābat*) of a professional scribe (*kātib*). Lithography gave way to photo-offset reproduction, before this was itself overtaken by the more recent successful development of computer-generated *nastaʿlīḳ* fonts.

While the core Indo-Aryan vocabulary of high-frequency items like verb stems and basic syntactic markers is common to Hindī and to Urdū, the latter is distinguished by its very large number of Perso-Arabic loans, amounting to some 70% of the vocabulary of most formal writing. There has long been a considerable literature on this defining component of the language, with much nice pedantry devoted to such points of pronunciation as the Urdū (and also Persian) preference for *-i-* in the third syllable of *maṣdars* of the third form (e.g. *mushāʿira* "poetic contest" [*q.v.*]), or to such vexed questions of orthography as the correct spelling in Urdū of *nashā* "development" (< Arabic *nashʾa*).

Most of these Arabic and Persian loans are adjectives and nouns, with the latter becoming subject to Urdū rules of gender and inflection, so that e.g. *kitāb* "book" is feminine (by analogy with Sanskritic *pōthī*), with plural *kitābēñ*, and so too all *maṣdars* of the second form are also feminine e.g. *taʿlīm* "education". Arabic nouns with final *tā marbūṭa* are fixed through Persian as having either final *-a*, assimilated to the indigenous class of masculines with final *-ā*, plural *-ē*, or else final *-at* in which case they are feminine, with indigenous plural *-atēñ*, e.g. *ʿimārat* "building", plural *ʿimāratēñ*. The Arabic sound plural *ʿimārāt* is also common in Urdū, where the formation is freely extended to other classes, e.g. *makānāt barā-yi farōkht* by direct analogy with English "houses for sale"). Loans are also abundant even in such core lexical classes as postpositions (*kē bāʿith* "because of"), conjunctions (*lihādhā* "therefore"), pronouns (*khud* "self"), and numerals (*hazār* "thousand"). While there are only a very few nativised verb stems like *farmānā* "to command" (< Persian *farmā-*), the Persian model of compounding loans with a few native stems like *karnā* "to do" and *hōnā* "to be" is very freely used, yielding many such pairs as transitive *maʿlūm karnā* "to inform", intransitive *maʿlūm hōnā* "to be known". Arabic in particular, which has become increasingly exploited as a direct source of loans with the disappearance of Persian from the education system in both India and Pākistān, furnishes enormous numbers of words to the modern written language. These relate not just to obviously Islamic contexts but embrace a vast range of abstract vocabulary and institutional terminology,

as often as not calqued on a English word which will be in more common colloquial use. A superfluity of synonyms is thereby created, with many Arabo-Persian coinages of more than doubtful currency helping to make up the inflated lists promulgated by officially sponsored word-manufacturing agencies.

Fodor (ed.), *Language reform: history and future*, iii, Hamburg 1983, 423-9; M.K.A. Beg, *Sociolinguistic perspective of Hindi and Urdu in India*, New Delhi 1996. For Pākistān, cf. C. Shackle, *Punjabi in Lahore*, in *Modern Asian Studies*, iv (1970), 239-67; M. Geijbels and J.S. Addleton, *The rise and development of Urdu and the importance of regional languages in Pakistan*, Rawalpindi 1986 (repr. from *Al-Mushir*, xxvii-xxviii [1985-6]); Tariq Rahman, *Language and politics in Pakistan*, Karachi 1996; idem, *The Urdu-English controversy in Pakistan*, in *Modern Asian Studies*, xxxi (1997), 177-207.

No descriptive grammar in English is comparable in scope to that of the still indispensable J.T. Platts, *A dictionary of Urdū, classical Hindī and English*, Oxford 1884, whose contemporary counterpart is the pioneering monolingual dictionary by Mawlawī Sayyid Aḥmad, *Farhang-i āṣafiyya*. Many aspects of the modern language are, however, usefully covered in some depth in M.A.R. Barker *et al.*, *A course in Urdu*, Ithaca, N.Y. 1975. C. Shackle and R. Snell, *Hindi and Urdu since 1800: a common reader*, London 1990, contains annotated key passages by Urdū writers on the language, and provides a systematic introduction to the Sanskrit, Arabic, Persian and English elements in the two languages. ʿAbd al-Ḥaḳḳ, *Ḳawāʿid-i Urdū* (1914, repeatedly reprinted) remains the normative grammar in Urdū. Classical Dakhinī Urdū is dealt with in A.N. Sh̲amatov, *Klassičeskiy Dakkhini (Yuz̲h̲nïy K̲h̲industani XVIIv.)*, Moscow 1974, to be used with some caution; Early Modern Urdū is described on the basis of selected texts in M.K.A. Beg, *Urdu grammar: history and structure*, New Delhi 1988; Modern Dakhinī Urdū is well treated in R.L. Schmidt, *Dakhini Urdu: history and structure*, New Delhi 1981, and its interaction with Telugu is exemplified in V.S. Lakshmi, *Influence of Urdu on Telugu*, Ḥaydarābād 1984; short accounts of a metropolitan substandard preserving many EMU features are provided in G.C. Narang, *Karkhandāri dialect of Delhi Urdu*, Delhi 1961, and Bahadur Singh, *The dialect of Delhi*, New Delhi 1966. Changing styles of printing and writing are illustrated and analysed in W.L. Hanaway and B. Spooner, *Reading nastaʿlīq: Persian and Urdu hands from 1500 to the present*, Costa Mesa 1995. The classic exemplification of modern word-formation is Abdul Haq, *The standard English-Urdu dictionary*, Awrangābād 1937 (with several later Indian and Pākistānī editions); the process is surveyed in M.H. Zaidi, *Word-borrowing and word-making in modern South Asian languages: Urdu*, in I. Fodor (ed.), *op. cit.*, 399-421, and is further usefully illustrated in M.A.R. Barker *et al.*, *An Urdu newspaper word count*, Montreal 1969.

2. Literature

Most South Asian literatures developed as products of the interaction between local folk elements and adaptations of the Sanskrit or the Persian learned tradition. Urdū literature, by contrast, owes much less to indigenous cultural patterns. Four main phases in its evolution may be usefully distinguished, naturally with some overlap between the approximate dates indicated:

(1) Dakhinī Urdū literature of the independent Muslim kingdoms of peninsular India (1500-1700);

(2) classical Urdū literature of northern India with its twin centres in the semi-independent courts of Dihlī and Lakhnaʾū (1700-1860);

(3) early modern Urdū literature of the colonial period produced in many cities of British India (1860-1940);

(4) modern Urdū literature increasingly centred in Pākistān (1940-present).

Apart from writings on Islamic subjects which have always looked naturally to Arabic, the largely poetic classical literature of the two pre-British periods was produced under the overwhelming influence of Persian, while from the later 19th century English literature has been an increasingly dominant model. This is particularly true of prose belles-lettres, where Persianate styles were less well established in Urdū than in the long poetic tradition which continues to be the literature's chief cultural marker, and which therefore forms the principal theme of the following summary outline.

Driven mainly by philological concerns, the 20th-century re-discovery of the Dakhinī Urdū literature, which became isolated from later developments owing

to its separate geographical location and its archaic language (see 1. above), has yet to lead to comparable critical insights. In terms of literary history, the 16th century is marked by a remarkable variety in the types of poetry produced first by Ṣūfī authors then also at the royal courts, embracing both popular and sophisticated styles, with the latter including poems very similar in language and character to the important contributions being made by northern Indian Muslims to the literature now unambiguously classed as Hindī [*q.v.*]. But Persianate genres became increasingly dominant, with systematic royal patronage encouraging a remarkable flowering of the *mat͟hnawī* on both historical and romantic subjects [see MAT͟HNAWĪ. 4]. Although these achievements in narrative poetry were hardly matched in the *g͟hazal*, a particular interest attaches to the extensive *dīwān* of the Ḳuṭb S͟hāhī ruler Muḥammad-ḳulī Maʿānī (1566-1611) as the poetic creation of an unusually gifted royal ruler, whose largely direct and unsophisticated lyrics are typical of the Dakhinī style.

This was the style cultivated towards the end of this period in Awrangzīb's new capital at Awrangābād in the northern Dakhan, most notably by the poet Walī Awrangābādī (1688-1707). Walī's later *g͟hazals* are the first to show significant cross-fertilisation from the sophisticated Persian models then in vogue in Dihlī, with sufficient success as to help inaugurate the development there of courtly poetry in Urdū. Wholesale adoption of the fashionable rhetoric of the *sabk-i hindī* [*q.v.*] elaborately cultivated by the Persian poets of the Mug͟hal court made it possible for the latters' artistic achievements to be matched in the Urdū poets of the next generation. The canonical "four pillars" (*čahār sutūn*) of early classical Urdū poetry include besides Maẓhar D̲j̲ānd̲j̲ānān (1700-81 [*q.v.*]) the three great poets Dard (1720-85 [*q.v.*]), the Naḳs͟hbandī *s͟hayk͟h* who was the unrivalled master of the Urdū mystical *g͟hazal*; Mīr Muḥammad Taḳī (1713-1810 [*q.v.*]), the immensely prolific master of the amatory *g͟hazal* and the short romantic *mat͟hnawī*; and the even more creative Sawdā (1713-81 [*q.v.*]), unrivalled in the *ḳaṣīda*, both panegyric and satirical, as well as in such strophic genres as the *s͟hahr-ās͟hōb* [see S͟HAHRANGĪZ. 3], elegies inspired by the devastation of Dihlī.

The impoverishment of the Mug͟hal capital forced both Mīr and Sawdā to seek new patrons in Awadh, and Lakhnaʾū became the chief centre of Urdū poetry in the following generations, in which the leading rivals were first Ins͟hāʾ (*ca.* 1756-1818 [*q.v.*]) and Muṣḥafī (1750-1824 [*q.v.*]), then K͟hʷād̲j̲a Ḥaydar ʿAlī Ātis͟h (1785-1847) and Nāsik͟h (d. 1838 [*q.v.*]). In significant keeping with the effective political emasculation of the Awadh kingdom, all these were primarily *g͟hazal* poets. Although often displaying a remarkable inventiveness in surface ornamentation, as in the titillating *rēk͟htī* style of "women's Urdū" developed by Ins͟hāʾ and Rangīn (1736-1835 [*q.v.*]), most later critics have found the Lakhnawī *g͟hazal* excessively artificial in its elaborate word-plays and conceits and over-trivial in its concern with meeting purely technical challenges, like those imposed by awkward combinations of metre and rhyme (*sanglāk͟h zamīnēṅ*). The strongly S͟hīʿī atmosphere of Lakhnaʾū encouraged the deployment of a similarly elaborate *sabk-i hindī* rhetoric to nobler effect in the strophic *mart͟hiya* (see MART͟HIYA. 4), whose magnificent development by Anīs (1801-74 [*q.v.*]) and Dabīr (1803-75 [*q.v.*]) constitutes the most significant exception to the two general rules of classical Urdū poetry, that it is very closely modelled on Persian originals and that it appears to best advantage in the *g͟hazal*. Prose is generally very much less significant during this period, although the all-round development of the literature is signalled by the rapidly increasing momentum of both prose and verse translations from other languages, including not only many Persian classics but also Arabic Islamic texts, most notably the first Urdū translations of the Ḳurʾān (see ḲURʾĀN. 9.b.2, also the final section of the bibliography below).

At the end of the classical period, there was a final flowering of the Dihlī court under the titular last Mug͟hal sovereigns Akbar II (*r.* 1806-37) and his son Bahādur S͟hāh II (*r.* 1837-58 [*q.v.*]), himself a well-known *g͟hazal* poet under the pen-name Ẓafar, though hardly one of the same calibre as his laureate D͟hawḳ (1790-1854 [*q.v.*]), chiefly remembered for his *ḳaṣīdas*, or his ingenious contemporary Muʾmin (1800-51 [*q.v.*]). All these have, however, been far surpassed in subsequent reputation by G͟hālib (1797-1869 [*q.v.*]), whose own pride in his neo-classical Persian verse has been largely forgotten in his posthumous elevation to absolute supremacy in the classical Urdū pantheon. Few Urdū poems have achieved such enduring currency as the best known examples from G͟hālib's slim Urdū *dīwān*, while in prose his Urdū letters reveal both the workings of his great poetic intelligence, and the progressive collapse of the culture which had nurtured the poetic art he lived to practise.

The classical period of Urdū poetry was marked by an ever stricter codification of rules, both linguistic and prosodic. Thus many of the colloquial Indian words and forms common in the poetry of Mīr and Sawdā (e.g. *ṭuk* "just, a little", *nidān* "at last", *sahī* "correct") came to be replaced by Perso-Arabisms in later verse (*d͟harā, āk͟hir, ṣaḥīḥ*). This reinforced the general favouring of Persianisms as a marker of poetic language (e.g. *čas͟hm, dast, s͟hab*, besides *āṅkh* "eye", *hāth* "hand", *rāt* "night") and was paralleled by ever stricter insistence on the scansion of words being governed by classicising rules, e.g. in the preservation of final consonant clusters.

Urdū prosody shows a similar relationship to Persian *ʿarūḍ* rules as that of Ottoman Turkish, with special adaptations hardly masking a fundamental identity. Apart from the special case of the *rubāʿī* [*q.v.*], the same few metres are used for the vast majority of poems. Probably the most popular is the almost symmetrically regular form of *muḍāriʿ* (illustrated below) scanned *mafʿūlu fāʿilātu mafāʿīlu fāʿilun* according to the *afāʿīl* system generally preferred to the elaborate terminology of the prosodists, closely followed by *ramal*—both *maḥd͟hūf* and *mak͟hbūn, hazad̲j̲*—usually *mut͟hamman sālim, mud̲j̲tat͟ht͟h, k͟hafīf* and *mutaḳārib*. But whereas Turkish phonetic patterns yield an excess of short vowels, the reverse is true of Urdū, where there is correspondingly rather greater cultivation of symmetrical longer metres which are less popular in Persian or Ottoman Turkish, e.g. the twenty-syllable *kāmil* with four feet of *mutafāʿilun*, or the formally similar metre with four feet scanning ⏑ – ⏑ – –, where the absence of classical precedent necessitates awkward analysis as *mutaḳārib s͟hānzdah-ruknī*, or four repetitions of the sequence *faʿal faʿūlun*. Written quantities are carefully observed in the scansion of Arabic and Persian words, but for native words a general licence permits all written final long vowels to be scanned as either long or short, and the same license applies to several of the commonest monosyllables like the possessive *kā* (*kē*), *sē* "from", *vōh* "that", *hay* "is". Poetic doublets taken over from Persian like *gar* for *agar* "if" also include such common native shortened forms as *ik*

for *ēk*" "one" *pa* for *par* "on", *tirā* for *tērā* "thy", *vāñ* for *vahāñ* "there". The following verse from Mu'min in *muḍāri'* illustrates the operation of several of these licences:

– – ⏑ / – ⏑ – ⏑ / ⏑ – – ⏑ / – ⏑ –
kūčē sē apnē ghayr kā muñh hay haṭā sakē

– – ⏑ / – ⏑ – ⏑ / ⏑ – – ⏑ / – ⏑ –
'āshiq kā sar lagā hay tirē naksh-i pā kē sāth

Not quite all metrical Urdū poetry is composed according to these adaptations of Persian *'arūḍ* with their carefully prescribed patterns of long and short syllables, since use is sometimes made in the *ghazal* of metres of the usual South Asian type which rely instead upon the count of metrical instants (*mātrā*), one to a short syllable and two to a long. The commonest type has 30 instants per line, divided by a strong caesura as 16 + 14. The free substitutions of two shorts for a long are illustrated in the alternations of dactyls and spondees in the following well-known *maṭla'* by Mīr:

– – / – ⏑ ⏑ / – – / – – // – ⏑ ⏑ / – – / – ⏑ ⏑ / –
ulṭī hō ga'īñ sab tadbīrēñ kučh na dawā nē kām kiyā

– – / – – / – ⏑ ⏑ / – – // – – / – ⏑ ⏑ / – ⏑ ⏑ / –
dēkhā is bīmārī-yi dil nē ākhir kām tamām kiyā

These metres are often loosely termed "Hindī metres", certainly a more appropriate designation than the prosodists' attempts to analyse the above example as *mutadārik shānzdah-ruknī*. This single intrusion of a South Asian element apart, however, both the prosodic and the rhetorical structures of classical Urdū poetry are exactly modelled on Persian patterns.

The *ghazal* was by far the most significant genre of the classical period, when the production of poetry rested upon the established system of courtly patronage, with the ruler and his laureate (*malik al-shu'arā'*) at its apex, and with the craft of versifying transmitted from master (*ustād*) to pupil (*shāgird*). Besides extensive informal circulation, both orally and in manuscript until the advent of lithography after the 1820s, public performances of the *ghazal* took place either at the formalised poetic contests called *mushā'ara* [*q.v.*] or in the entertainments (*maḥfil*) whose chief attraction was the performance (*mudjrā*) of song and dance by trained courtesans (*ṭawā'if*).

While this aristocratic style continued to be practised by poets like Dāgh (1831-1905 [*q.v.*]), laureate to the Niẓām of Ḥaydarābād, the onset of the early modern period was marked by substantial shifts in the institutional basis of Urdū literature as well as in genres, styles and themes, where prose writing and English models are of ever increasing significance. The advent of print capitalism gave enormous new significance to major publishers, especially to the press founded at Lakhna'ū in 1858 by Munshī Nawal Kishōr (1836-95), a Bhārgava Brahmin from a Persianate cultural background. His publication of so many original and translated Urdū titles performed a vital role in preserving major parts of the old oral culture, like the vast *dāstān* stories of the Amīr Ḥamza cycle, while his new initiatives helped support Urdū prose writers in the new style, like Ratan Nāth Sarshār (1845-1903), author of the sprawling modern picaresque *Fasāna-yi Āzād* (1880), or 'Abd al-Ḥalīm Sharar (1860-1926), pioneer of the Urdū historical novel and memorialist of the old Lakhna'ū, who were both editors of Nawal Kishōr's newspaper *Awadh akhbār*.

Most of the major Urdū writers of the period were drawn at some stage into the service of the colonial state or into the new-style private or princely organisations it called into being. Thus the remarkable translator and moralistic novelist Nadhīr Aḥmad (1836-1912 [*q.v.*]) owes his title "Deputy" to his quondam appointments in the education and finance departments, while the noted Islamic historian and critic of Persian literature Shiblī Nu'mānī (1857-1914 [*q.v.*]) worked for a while as a teacher, and the restless Ruswā (1858-1931 [*q.v.*]), whose *Umrā'ō Djān Adā* (1899) is a matchless memoir of the life of a courtesan in pre-Mutiny Lakhna'ū, found eventual refuge in the 'Uthmāniyya Bureau of Translation in Ḥaydarābād. Service in the Pandjāb education department in Lāhawr was crucially influential both for Muḥammad Ḥusayn Āzād (1834-1910 [*q.v.*]), whose pioneering *Āb-i ḥayāt* (1881) remains central to the historiography of classical Urdū literature, and for Alṭāf Ḥusayn Ḥālī (1837-1914 [*q.v.*]), the literary critic and biographer who was the leading poetic spokesman of Sayyid Aḥmad Khān's 'Alīgaṛh movement and whose *Musaddas* (1879) in the revolutionary new style of "natural poetry" (*nēčaral shā'irī*) is the most important Urdū poem of the late 19th century. Even on the conservative side, the anti-'Alīgaṛh satirist Akbar Allāhābādī (1846-1921 [*q.v.*]) worked for many years as a judge.

Many of the characteristic tendencies of this first part of the early modern period of Urdū literature, its seriousness of purpose and content, its sober exploitation of new stylistic resources, above all its central concern with re-interpretations of the Islamic past capable of addressing the issues raised by the colonial present, find their culmination in the linguistically varied output of Muḥammad Iḳbāl (1879-1938 [*q.v.*]), whose undoubted intrinsic importance as a philosopher-poet has been much inflated by the subsequent official cult of him in Pākistān. In spite of the international repute of his lengthy Persian *mathnawīs*, his most vital poetic achievements are in his Urdū collections, particularly the great poems in the second part of *Bāng-i darā* (1922) and in *Bāl-i Djibrīl* (1935). Consisting of both *ghazals* and strophic forms, these deploy to nobly rhetorical effect a grandiloquently Persianised diction which proved far more successful than Ḥālī's bare style in articulating the elevated sense of a truly national poetry, however that Muslim nation (*ḳawm*) was to be defined in South Asia.

Iḳbāl's literary presence was of that overwhelming kind which ends an era rather than directly inspiring new beginnings. The modern period proper of Urdū literature, which can here be described only in very summary outline, dates from the 1930s and 1940s, when a new vogue for social realism was set by the many talented authors associated with the Progressive Writers Movement (*Taraḳḳī-pasand Taḥrīk*). As in many other literatures of the period, those who fairly soon developed ideological differences with the movement's prescriptive Marxism generally produced artistically more successful work than those who stayed closest to the party line.

Two outstanding writers associated early in their careers with the Progressives of the time characterise both through their own work and through their influence on their successors the different dynamics of poetry and of prose in modern Urdū literature. The leading young poet of the war years was Fayḍ Aḥmad Fayḍ (1910-84), born like Iḳbāl in Siālkōṭ in the Pandjāb, but whose style looked back past the latter to Ghālib while also drawing on English examples. Using both the *ghazal* and free verse (*āzād naẓm*) to explore the modern conflict between private sensibility and public engagement, Fayḍ's poetry soon acquired an

extraordinarily enduring popularity both in Pākistān and amongst the Indian Urdū public (which continues to extend far beyond the circles of self-proclaimed Urdū speakers). Fayḍ's influence remains palpable in the work of most contemporary poets throughout the international Urdū literary world, where young littérateurs continue to be drawn to trying their hands at composing *ghazals* in his style.

While the *ghazal* maintains its popularity as the prime genre of Urdū poetry, especially in musical performance by both male and female singers, the leading genre of modern prose is the short story. Earlier developed by the Kāyasth Prēm Čand (1880-1936 [*q.v.*]), who combined a keen human observation with an often sentimental Gandhian idealism, the Urdū short story was given fresh life by the Progressive writers, who particularly welcomed the opportunities it provided for an often brutal social realism. The leading early exponent of this modern style was the Pandjāb-born Saʿādat Ḥasan Manṫō (1912-55), whose still very popular stories vividly embrace both the louche 1940s demi-monde of Bombay (whose film industry has been a major patron of many modern Urdū writers) and the horrors consequent on the Partition of the Pandjāb. It is, however, a significant pointer to the varied subsequent growth and development of later Urdū creative prose, the varied product of both historical and social realism as well as more avant-garde types of modernism (*djadīdiyyat*) that Manṫō is in no sense comparable in authority to those defining figures of the Urdū poetic succession, Ghālib, Ḥālī, Iḳbāl and Fayḍ.

Bibliography: The bibliography by Shabana Mahmud may be consulted for further titles in addition to those cited below, which are restricted to significant Western language writings and which for reasons of space exclude modern narrative prose.

AL-**URDUNN**, the Arabic name for the Jordan River, used also from early Islamic times onwards to designate the regions adjacent to the river's course.

1. The river

This appears in Arabic as the *nahr al-Urdunn*, in Old Testament and later Hebrew as *ha-Yardēn*, and in the Septuagint and the classical geographers as ὁ Ἰορδάνης. After the Crusading period, local Arabic usage often referred to it as *al-Sharīʿa* [*al-kabīra*] "the [Great] watering-place". It was, and still is, revered by Jews, Christians and Muslims, by Christians in particular on account of Christ's baptism at the hands of John the Baptist in the Jordan waters.

This shallow river is the lowest in the world, running within a narrow trough whose greatest width, about 25 km/15 miles, occurs in the region of Jericho [see RĪḤĀ]. It forms part of the Great Rift Valley which runs from southeastern Turkey to Lake Nyasa in East Africa, but has never in history presented much of a barrier politically or militarily. The river has three main sources, all of which rise from the foot of Mount Hermon (the Djabal al-Thaldj/al-Shaykh in Arabic usage): the Nahr Ḥaṣbānī, the Nahr Laddān and the Nahr Bāniyās. These join together in the Ḥūla (Hule) basin, until recent times a malarial papyrus swamp (see below). South of here, the river cuts through a basaltic gorge below the "Bridge of Jacob's daughters" (*djisr banāt Yaʿḳūb, gesher bʿnōt Yaʿaḳōb*), dropping 146 m/480 feet in 6.5 km/4 miles, and in its 16 km/10 miles' course from Lake Hule to the Sea of Galilee (*Buḥayrat Ṭabariyya*) falling from 70 m/230 feet above sea-level to 210 m/689 feet below. After flowing through the Sea of Galilee, the Jordan receives the important left-bank tributary of the Yarmūk [*q.v.*], which has a large but variable flow and which marks part of the modern Syrian-Jordanian frontier, and other tributaries both left-bank and right-bank (of the latter ones, there may be mentioned the Nahr Djālūt, at the head of which, between Nābulus and Baysān, is the ʿAyn Djālūt [*q.v.*], scene of the famous battle between the Mongols and the Mamlūks). It then spreads into the plain of the Ghawr or Ghōr, but with so many meanders that it actually runs for 217 km/135 miles to cover a direct distance of 104 km/65 miles between the Sea of Galilee and the Dead Sea. The Ghawr was formerly in considerable measure filled with dense thickets along the river banks, and largely barren wastelands beyond them; but with the construction in the 20th century of irrigation canals, much good agricultural and orchard land has been created for vegetable and fruit-growing, including winter produce. However, there were already in early Islamic times some fertile spots in certain parts of the Jordan valley, such as around Jericho (cf. the *djinān al-Urdunn* held out by the Prophet Muḥammad in Mecca as a comparison for the heavenly prospects of his followers, in al-Ṭabarī, i, 1232).

The Jordan ends in the Dead Sea (*al-Buḥayra al-mayyita, Baḥr Lūṭ* [*q.v.*]). The river's rate of flow diminishes towards this point through seepage and evaporation caused by the great heat, and because of this evaporation, salt and other minerals are deposited. The Sea's level, apart from some seasonal variation, accordingly remains substantially the same. South of the Dead Sea, the depression continues as that of al-ʿAraba and then rises considerably before dropping to ʿAḳaba [*q.v.*] at the head of the Gulf of that name.

On account of its currents, its numerous windings and many shallows, the Jordan cannot be used for navigation. On the other hand, even in ancient times several of these shallows formed fords which connected the lands east with those west of the Jordan and thus linked up the Mediterranean coast and Egypt with Damascus. North of Lake Tiberias there are five fords and south of it 54; they are most frequent opposite Baysān. In the Old Testament, they are mentioned under the names *maʿabār* or *maʿbārā*. Whether the Israelites had ferries is uncertain, and in any case not proved by the obscure passage 2 Sam. xix. 19. On the other hand, it is not difficult to imagine that in their fighting with the Aramaeans in the lands east of the Jordan, they would take their troops, horses and chariots (1 Kings xxii. 35) across the Jordan by fords, but how they did it we are not told (with floats ?). If necessary it was possible to swim the Jordan (1 Macc. ix. 48), but in view of the strong current it required skill and strength. There were certainly no bridges, since these only began to be built in the Roman period. The ford a little to the south of the Ḥūla district is specially celebrated; from it a road

led via Ḳunayṭra to Damascus. Whether there was a Roman road here is, according to P. Thomsen's map in *ZDPV*, xl (cf. 33), uncertain, but in the Middle Ages this ford, called *Vadum Jacobi* (wrongly from Gen. xxxii. 22), is often mentioned and was of considerable strategic importance during the Crusades. Here Baldwin III was defeated in 1157 by Nūr al-Dīn and in 1178 Baldwin IV built a fort below the crossing, but in the following year it was stormed by Ṣalāḥ al-Dīn and destroyed. At a later date, a three-arched bridge was built of large blocks of basalt at the site of the ford (cf. illustrs. in *ZDPV*, xiii, 74). It is known to have been in existence in 1450 and was probably built not long before. The name "Bridge of Jacob's daughters", points to the old *Vadum Jacobi*, but is remarkable as Jacob did not have a number of daughters.

One of the most important roads from Damascus to the lands west of the Jordan has probably always been the route via Fīḳ (or Afīḳ, perhaps Afeḳ [Aphek] 1 Kings xx. 26, 30, cf. xiii. 22) to the south end of the Sea of Galilee, where the Jordan was crossed by a ford where it leaves the Sea. A little south of the crossing are the ruins of two stone bridges, Umm al-Ḳanāṭir and Dj̲isr al-Sidd. Nothing is known of their history, but one of them is probably the bridge at the south end of the lake which al-Muḳaddasī mentions in his description of Ṭabariyya [*q.v.*] and of which Yāḳūt says that it had over 20 arches. As late as the 16th century we are told by W. de Baldensel that he crossed the Jordan by a bridge here (Robinson, *Biblical researches in Palestine*[2], iii). Close to the junction of the Yarmūk with the Jordan is a bridge, Dj̲isr al-Mudj̲āmiʿ, whence roads led to Mkēs and Irbid below the hills of Ḳarn Ṣarṭaba. Further to the south we again find a bridge, the Dj̲isr al-Dāmiya, but it is now on dry land as the river has dug out a new bed here. It was built in 664/1266 by the vigorous Mamlūk sultan Baybars, who also had bridges built at several other places (cf. Röhricht, *Archives de l'Orient latin*, ii/1, 382; Clermont-Ganneau, in *JA*, ser. 7, vol. x [1887], 518). Among the most used is the bridge north of Jericho which leads to the Wādī Nimrīn.

In the brief descriptions of the Jordan in the Arab geographers there are a few details of some interest. Al-Muḳaddasī mentions that the river is unnavigable. Yāḳūt, quoting an older authority, says that the Jordan above the Lake of Tiberias was called the "Great" and between the Lake and the Dead Sea the "Little Jordan", which statement, however, is probably based on a confusion with the Yarmūk. He mentions the sugar plantations watered by the river in al-G̲h̲awr [see RĪḤĀ]. Al-Dimas̲h̲ḳī mentions the hot springs near the Lake of Tiberias and of Mudj̲āmiʿ where the Yarmūk joins the Jordan. He also gives an account of the remarkable phenomenon at the river's end. The Jordan flows night and day into the Dead Sea without any outflow, yet the Sea does not increase in winter or decrease in summer. The main road from Damascus to Egypt goes, according to Ibn K̲h̲urradād̲h̲bih (219) and the geographers who follow him, via Fīḳ to the south end of the Lake of Tiberias and thence by a circuitous route via Tiberias to Baysān. In the 14th century on the other hand, the route lay through a part of ʿAdj̲lūn, as one descended from Baysān into the Jordan valley to Mudj̲āmiʿ and thence over the bridge to follow the road to Irbid. In the 15th century, a more northerly route began to come into use by going eastwards from the new capital Ṣafat crossing the Jordan on the above-mentioned "Bridge of Jacob's daughters" and thence via Nuʿrān and Ḳunayṭra to Damascus. This road remained the usual one, and later, the road leading to and from the bridge was improved.

From the end of the First World War until 1948, the Jordan, except in its extreme north, marked the boundary between the British mandated territory of Palestine and the newly-created Hashemite kingdom of Transjordan (see below, 2.). After 1948 and the establishment of the State of Israel, the river lay entirely within Israel north of its confluence with the Yarmūk, and below there it divided the kingdom of Jordan from the West Bank of Palestine, after 1967 becoming the effective frontier between Jordan and Israel.

This new function of the Jordan as an international boundary, with its headwaters and tributaries often in military zones and with four powers (Israel, Jordan, Lebanon and Syria) involved, has caused problems regarding the division of its waters and their utilisation through the building of dams along the Jordan's headwaters and irrigation canals along its lower course. The Hule drainage project completed by Israel in 1957 channelled the Jordan there into two main canals, speeding the flow of water through the marshes, reducing water loss by means of surface irrigation and making drained marshland available for agriculture. The G̲h̲awr irrigation canal, 70 km/43 miles long, was completed along the river's east bank by Jordan in 1967, permitting a great increase in agricultural production there. In Israel, as well as the Hule drainage project and the digging of a canal from the Sea of Galilee to Beth She'an, a water-supply grid has been constructed allowing 11,300 million cubic feet of the Jordan's water to be pumped to the arid regions of central and southern Israel. However, political and diplomatic difficulties continue to prevent the adoption of wider, regional policies of water utilisation.

2. History

(a) *Up to 1250*

The name of al-Urdunn was first applied to one of the military and administrative districts (*adj̲nād*, sing. *dj̲und* [*q.v.*]) that were established in the province of al-S̲h̲ām (*q.v.*) in the wake of the early Islamic conquests. The territory of the *dj̲und* al-Urdunn corresponds closely to that of the Byzantine province of Palaestina Secunda. Centred on its capital of Ṭabariyya [*q.v.*], only part of the original *dj̲und* falls within the borders of the present Hashemite Kingdom of Jordan. Given the varying descriptions of the early historians and geographers, the precise boundaries of *dj̲und* al-Urdunn probably varied over time. For example, ac-

cording to al-Balādhurī, the djund embraced the towns of Faḥl, Ṭabariyya, Baysān, Sūsiyya, Afīḳ, Djarash, Bayt Ra's, Ḳadas, ʿAkkā, Ṣūr, Ṣaffūriyya, and the region of the Djawlān. To this list al-Muḳaddasī adds al-Farādhiyya, al-Ladjdjūn, Kābul and Adhriʿāt. According to al-Yaʿḳūbī, the population of the djund was a mixture of non-Arabs and Arabs, the latter especially Yamanī tribes.

As for the history of Transjordan proper in Islamic times, only a bare outline can be reconstructed. Under Byzantine rule, the region to the east of the Jordan river saw its greatest prosperity, particularly in the north. This is especially true of the sixth century A.D., when the region saw a general increase of settlement and the expansion of religious sites and public works. This period coincides with the rise of the Ghassānids [q.v.] and other Arab tribes to prominence as Byzantine allies along the eastern *limes*. Although the Sāsānid invasion of the region in 614 seems to have disrupted the prosperity of the region, it was able to recover and there are no signs of serious regional economic decline after the Byzantine recovery in 628 or immediately after the Islamic conquests of the 630s and 640s. Indeed, the indigenous Christian populations continued to flourish well after the conquests.

The first significant conflict between Muslim and Byzantine troops took place at Mu'ta [q.v.] in central Transjordan in 8/629. In 9/630, it is said that local leaders from Ayla, Djarbā', Maʿān and Adhruḥ assembled at Tabūk in northern Arabia, where they made treaty arrangements with the Prophet Muḥammad. However, it was not until the larger campaign of 13/634 that Muslim armies successfully invaded the region, with the surrender of Ma'āb (modern Rabba), followed by the decisive Muslim victories at Dāthin and Adjnādayn [q.v.] in southern Palestine. Subsequent Muslim victories east of the Jordan at Faḥl and at the Yarmūk river (in 15/636) secured Transjordan as Islamic territory.

Following the conquests, Transjordan was divided up between the *adjnād* of al-Urdunn, Filasṭīn [q.v.] and Dimashḳ, which embraced most of the region. Archaeology attests to the growing Muslim presence in the area, including the development of urban areas like ʿAmmān [q.v.] in the subdistrict of al-Balḳā' [q.v.] and the princely estates on the desert fringe (the Umayyad "desert castles" or *ḳuṣūr* [see BĀDIYA, in Suppl.]). Indeed, it seems likely that the *ḳuṣūr* were an important facet of the local economy. However, for most of tbe Umayyad period, the literary sources have little to say about the region. The civil wars, which involved so many areas of the caliphate, appear to have had little direct impact on Transjordan.

Although the ʿAbbāsid family planned their revolt against the Umayyads from their estate at Ḥumayma [q.v.] in the south, the region played no special role in the course of the ʿAbbāsid revolution of 132/750. For a brief time, one former Umayyad commander, Ḥabīb b. Murra, attempted to fend off ʿAbbāsid forces in the Balḳā', but this was short-lived. Although ʿAbbāsid rule did not directly threaten the region's prosperity, it is noteworthy that Transjordan did not attract the interest of the early ʿAbbāsid élite as it had their Umayyad counterparts. Rather, the region became isolated from the direct supervision of the government, and, like other similar regions, was an occasional home to rebels. Some of these rebellions took on a pro-Yamanī, pro-Umayyad, and even eschatological flavour, as with the revolt of al-Faddaynī (or al-Fudaynī) in the vicinity of ʿAmmān about 198/813 and that of al-Mubarḳaʿ [q.v.] in 226/840. During the ʿAbbāsid period, the region's rugged terrain also provided sanctuary for brigand groups like the Zawāḳīl [q.v.].

As the ʿAbbāsid caliphate lost control of its provinces in the course of the 3rd/9th and 4th/10th centuries, southern al-Shām, including Transjordan, fell into the orbit of Egyptian-based states like that of the Ṭūlūnids, Ikhshīdids, and Fāṭimids [q.vv.], while the Ḳarāmiṭa [q.v.] and their tribal allies dominated the steppe and desert. The Fāṭimids are also known to have used the region as a source of tribal manpower. At the same time, rural and urban settlement appears to have contracted. Indeed, for Transjordan, this period is marked by the increasing prominence of Bedouin tribes, notably the Ṭayyi' [q.v.], who appear to have arrived from northeastern Arabia by the mid 4th/10th century, and who are best represented by the short-lived Djarrāḥid dynasty [q.v.]. However, the influence of nomadic groups in southern al-Shām probably declined after the Fāṭimid victory over the allied tribal forces of Ṭayyi', Kalb and Kilāb at Uḳhuwāna in 420/1029. Fāṭimid control over the region effectively ended in 463/1071 when the Türkmen adventurer Atsïz b. Uvak [q.v.] answered Fāṭimid appeals for military assistance in Palestine and proceeded to occupy all of southern al-Shām for himself, only to have his domains absorbed by the Saldjūḳid *amīr* Tutush [q.v.] in 472/1079.

In the early 6th/12th century, the lands east of the Jordan were a buffer zone between the Crusaders and Muslim princes in Cairo and Damascus. Early on, the region was governed by Türkmen warlords, but by 509/1115 Baldwin I of Jerusalem had taken direct control of the region, and Transjordan became a barony dominated by the two principal Crusader strongholds in the region, al-Karak and al-Shawbak/ Montréal [q.vv.]. These two fortresses were the target of Fāṭimid and, later, Ayyūbid assaults under Salāḥ al-Dīn. Under the Ayyūbids, much of the region became an appanage for princes like al-Muʿaẓẓam ʿĪsā [q.v.]. Under these princes, Transjordan saw a proliferation of fortified settlements and the return of some of its former prosperity.

Bibliography: 1. Sources. The Arabic geographical texts collected in the *BGA* all have relevant information on the *djund* of al-Urdunn and on Transjordan, especially Ibn Khurradādhbih, 78, Yaʿḳūbī, *Buldān*, 326-7; Ibn Ḥawḳal, 173 ff. The later compilation of Ibn Shaddād, *al-Aʿlāḳ al-khaṭīra, Liban, Jordanie, Palestine*, ed. Dahan, Damascus 1963 is also useful. See also Le Strange, *Palestine*. (b) *From 1250 to 1920*

After 648/1250, Transjordan passed for over two-and-a-half centuries under Mamlūk control, forming part of the province of Syria, governed from Damascus. As noted in (a) above, the region had many castles and fortified points in the Crusading and Ayyūbid periods, such as al-Karak and al-S̲h̲awbak [*q.vv.*]. In addition to these two mentioned above, the Ḳalʿat al-Rabaḍ at ʿAd̲j̲lūn [*q.v.*], built by al-Malik al-ʿĀdil Abū Bakr b. Ayyūb's commander ʿIzz al-Dīn Usāma in 580/1184-5, was added to in Mamlūk times and survived more or less intact until the severe earthquake of 1837. At al-Karak, Baybars I [*q.v.*] added further defensive works after it had passed to him in 671/1272 from the Ayyūbid ʿUmar, son of al-Malik al-ʿĀdil Abū Bakr, and that sultan also rebuilt the fortress of al-Salṭ. The fort at al-Azraḳ, to the west of ʿAmmān, built or rebuilt by the Ayyūbid commander ʿIzz al-Dīn in the first half of the 7th/13th century, continued in use under the Mamlūks and was intact enough in 1918 for T.E. Lawrence to make it his headquarters before pushing northwards to Darʿa/Deraa and Damascus.

Administratively, the hilly region of northern Transjordan, the Balḳāʾ [*q.v.*], with its main settlement at Ḥisbān, was usually administered ultimately from the Syrian capital Damascus, falling within the "southern flank" (*safka ḳibliyya*) of that very large province, with its administrative centre at Darʿa. Al-Karak, however, was usually a separate *niyāba*, as in the exposition of administrative geography of Ibn Faḍl Allāh al-ʿUmarī and the secretarial manual of al-Ḳalḳas̲h̲andī. The former mentions four administrative divisions of southern Transjordan, essentially the hill region of the S̲h̲arāt, that of the chef-lieu al-Karak itself, and those of al-S̲h̲awbak, Zug̲h̲ar and Maʿān. Al-Karak was a place of exile or imprisonment for rebellious or suspected princes and *amīrs*, and just before his death, sultan al-Nāṣir Muḥammad b. Ḳalāwūn [*q.v.*] entrusted its government to his son Aḥmad. An important aspect of the *nāʾib*'s duties was attempting to control the local Bedouin. Al-Ḳalḳas̲h̲andī states that, amongst the Banū D̲j̲ud̲h̲ām [*q.v.*], there were the Ṣak̲h̲r at al-Karak, the Mahdī in the Balḳāʾ, the ʿUḳba and Zuhayr at al-S̲h̲awbak, and the Saʿīd at Ṣalk̲h̲ad and in the Ḥawrān [*q.vv.*]. See M. Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks d'après les auteurs arabes*, Paris 1923, 236-8; al-Ḳalḳas̲h̲andī, *Ṣubḥ al-aʿs̲h̲ā*, i, 334, xii, 220-32.

Mamlūk control over Transjordan weakened, with the general decay of the state, in the 9th/15th century. Thus the region round ʿAd̲j̲lūn became the focus of a tribal amīrate under the G̲h̲azawī family, who managed to extend their power across the Jordan to the rural hinterlands of Jerusalem and Hebron. After 922/1516, Transjordan passed under Ottoman Turkish control for some four centuries. Under the new Ottoman administrative arrangements, the district round ʿAd̲j̲lūn now became a *sand̲j̲aḳ*, with the G̲h̲azawīs as *sand̲j̲aḳ beyis*, until the mid-11th/17th century; these *amīrs* of ʿAd̲j̲lūn also frequently held the lucrative post of *amīr al-ḥad̲j̲d̲j̲*, providing the military escort for the Syrian pilgrims to the Holy Places in Arabia. At the beginning of the 12th/18th century, ʿAd̲j̲lūn was briefly part of the *sand̲j̲aḳ* of Ṣaydā/Sidon. In the 19th century, the *sand̲j̲aḳ* of ʿAd̲j̲lūn appears as such in the 1266/1849 *sālnāme*, but in 1865 as a *ḳaḍā* of the *sand̲j̲aḳ* of the Ḥawrān, with Irbid as its administrative centre. Al-S̲h̲awbak or al-Karak formed a separate *sand̲j̲aḳ* in the 10th-11th/16th-17th centuries, whilst the *sālnāme* of 1311/1893 gives the *sand̲j̲aḳ* at that time as that of Maʿān or al-Karak (see A. Birken, *Die Provinzen des Osmanischen Reiches*, Wiesbaden 1976, 242, 245, 246).

We derive information on demography and on the agricultural and financial situation of Transjordan in early Ottoman times from the Ottoman state *defters*, in particular, the *mufaṣṣal* ones for 1005/1596-7; see W.-D. Hütteroth and K. Abdulfattah, *Historical geography of Palestine, Transjordan and southern Syria in the late sixteenth century*, Erlanger Geographische Arbeiten, Sonderband 5, Erlangen 1977.

In the first three decades of the 11th/17th century, the great *amīr* Fak̲h̲r al-Dīn Maʿn II was able to expand into the Ḥawrān and the ʿAd̲j̲lūn region until his defeat and capture at the hands of the Ottoman governor of Damascus Küčük Aḥmed Pas̲h̲a [see FAK̲H̲R AL-DĪN]. After this success, the Ottoman authorities attempted to tighten their grip on Transjordan. The hegemony of the G̲h̲azawīs of ʿAd̲j̲lūn was gradually reduced, but Ottoman hopes of closer control were thwarted by extensive movements of Bedouin, especially in the 12th/18th and early 19th centuries, when growing pressure from the northwards movement in Nad̲j̲d of the ʿAnaza [*q.v.*] pushed other tribes towards Transjordan, such as the Ṣak̲h̲r [*q.v.*] and their rivals the ʿAdwān and the Ḥuwayṭāt. The resultant increased insecurity affected the Pilgrimage route, which compelled the Ottoman authorities to pay subsidies to the tribal *s̲h̲ayk̲h̲*s in order to ensure unimpeded access to the Holy Places. Even so, Ottoman suspiciousness and duplicitous dealings by the Porte led on occasion to violent attacks on the Syrian Pilgrimage caravan, as in 1756, when 20,000 pilgrims were reported killed or dead from thirst in the desert, and many more enslaved by the Bedouin. A further destabilising factor was the attacks in the opening years of the 19th century by the Wahhābīs. Wahhābī influence was felt at al-Karak by 1806, when local tribes acknowledged, if only nominally, the overlordship of Suʿūd b. ʿAbd al-ʿAzīz. In 1809 Wahhābī forces raided up the Wādī Sirḥān, and in 1810 another raid via al-Azraḳ reached to within a few miles of Damascus; fortunately for the Ottomans, pressure on the first Suʿūdī state by Muḥammad ʿAlī Pas̲h̲a of Egypt and his sons relieved Damascus of more threats.

Muḥammad ʿAlī's occupation of Syria during the 1830s triggered off various protest revolts, in particular in 1834 when the introduction of conscription was attempted. Rebels in the towns of Palestine were pursued by Ibrāhīm Pas̲h̲a across the Jordan and crushed at al-Karak and al-Salṭ. But once the Egyptians withdrew from Syria in 1841, tribal anarchy had full rein in Transjordan. Thus in the troubled decades which followed, the Christian villagers of Tafīla in the southern part of the S̲h̲arāt abandoned their homes; in 1880 a number of Christian families left their homes in al-Karak to establish themselves at the deserted site of Mādaba. Up to 1867 there were apparently no villages and no cultivation east of al-Salṭ. Whereas a more northerly region like the Ḥawrān increased in settlements and in population during the second half of the 19th century, this economic and agricultural progress tailed off as one went southwards, and there may even have been regression in the south; thus the

population of al-Karak, estimated at 8,000 in 1872, was down to *ca.* 2,000 by 1895. In 1851 the Ottomans installed a *ḳāʾim-maḳām* at Irbid over the *sandjaḳ* of the ʿAdjlūn district, within the *mutaṣarriflik* of Nābulus. After the great *wilāyet* reorganisation of the Grand Vizier Fuʾād Pasha and Midḥat Pasha [*q.vv.*] of 1864, which included the *wilāyet* of Damascus, further attempts were made to impose order in Transjordan. Muslim refugees from the Caucasus were brought in, such as the settlement of Circassians [see ČERKES] at ʿAmmān in 1878 and in the Golan heights near al-Ḳunayṭira/Quneitra. The Ottomans managed to collect some taxes as far south as al-Karak by 1882, and by 1893 established an administrative presence in al-Karak and Maʿān. Even so, Ottoman control in southern Transjordan remained tenuous. The Bedouin tribes had to be largely left to settle their internal disputes, such as those of the Ṣakhr and the ʿAdwān, by fighting, with occasional punitive expeditions, not usually very successful, by the Turks, such as that of 1869 against the Ṣakhr; and 1891-5 there was fighting around Petra.

Unrest continued into the early 20th century. A notable event of the opening years was the extension of the Ḥidjāz Railway [*q.v.*] to al-Zarḳāʾ by 1902 and Maʿān by 1904. It was constructed under considerable difficulties, including from Bedouin attacks, since the tribal *shaykh*s saw it as affecting their traditional role as protectors (at a price) of the Pilgrimage caravans. Friction between the local population of southern Transjordan and Turkish officialdom and its soldiery continued. A local revolt against the Turkish garrison in al-Shawbak took place in 1905. In 1910, the same year as that of the Ḥawrān [*q.v.*] rising, a more serious outbreak took place at al-Karak, in which tribesmen and sedentaries joined together against Ottoman attempts at land registration (regarded as *inter alia* the prelude to increased taxation), at the confiscation of personal arms and at a census as the preliminary for the introduction of conscription. Tribesmen of the Ṣakhr and ʿAṭiyya attacked the Ḥidjāz Railway and the station at Ḳaṭrāna, that nearest to al-Karak, as symbols of Ottoman penetration of the region. The revolt was bloodily suppressed by troops sent from Damascus, and the local Madjālī family of al-Karak, regarded by the Turks as ringleaders, outlawed, but the resultant intensification of Arab-Turkish negative feeling prepared the way for the Arab Revolt of a few years later.

The Ottoman empire entered the First World War in November 1914, but the Arab population of Transjordan was not greatly affected until June 1916 when the Sharīf al-Ḥusayn b. ʿAlī [*q.v.*] raised the flag of rebellion in the Ḥidjāz. In June 1917 T.E. Lawrence and Shaykh Awda Abū Ṭayyiʾ of the eastern Ḥuwayṭāt defeated a Turkish force south of Maʿān and in July captured al-ʿAḳaba/Aqaba. This last success made it now possible to concert operations with Allenby's Allied forces in Palestine. An attack by British and Commonwealth forces across the Jordan in early spring 1918 could not be sustained, but the Sharīf Fayṣal [see FAYṢAL I] and his Arab forces in southern Transjordan attacked Maʿān and destroyed several sections south of the town, thus isolating the Turkish garrisons along the railway to Medina for the rest of the War, an isolation sealed by the Imperial Camel Corps's seizure of al-Mudawwara, east of al-ʿAḳaba, a vital source of water for running locomotives. By 23 September al-Salṭ was taken, ʿAmmān two days later and Darʿa on 28 September, whilst the Turkish 2nd Corps which had been occupying Maʿān surrendered. Thus Transjordan was now clear, after almost exactly four centuries, of any Ottoman presence.

During the War, the attitude of the Arab notables and *shaykh*s of Transjordan had varied. Fayṣal received much valuable support from such Arab tribes as the Ruwala [*q.v.*] of northern Arabia, the Ḥuwayṭāt and some of the Ṣakhr in the Balḳāʾ. Other tribes, including most of the Ṣakhr, had, however, tended to hedge, as also was the case with the sedentary clans. The Christian clans generally favoured Fayṣal, and notables from al-Karak and Mādaba were exiled by the Ottoman military authorities to Adana province for their Sharīfian sympathies. Many of the Muslim clans nevertheless regarded the Ottomans as upholders of the cause of Islam and were suspicious of the Sharīf al-Ḥusayn and his sons because of their British connections. Several of these leading *shaykh*s were invited by the Ottomans to Damascus, and feasted and honoured there. Only when it became clear that the Ottoman position in Transjordan was unsustainable did some of these *shaykh*s begin to declare their support for Fayṣal and his cause.

When Damascus was captured and the Turkish army retreated northwards to the Taurus line, the whole of the Levant was placed under an Occupied Enemy Territories Administration, with the eastern part of Syria, including Transjordan, coming under Fayṣal's control. From the Balḳāʾ southwards, Transjordan was placed under a military administration headed by Fayṣal's commander-in-chief, the ʿIrāḳī former Ottoman Army officer Djaʿfar al-ʿAskarī, and local notables summoned to swear allegiance to the Sharīfian government in Damascus. At the end of 1919, this government divided its Syrian territories into eight *liwāʾ*s: that of the Ḥawrān included the regions of ʿAdjlūn and Irbid with its chef-lieu at Darʿa; that of the Balḳāʾ was centred on al-Salṭ; whilst the *liwāʾ* of al-Karak was extended southwards into northern Ḥidjāz to include the neighbourhood of Tabūk [*q.v.*]. But on the whole, Transjordan was a neglected part of Sharīfian Syria; Fayṣal was pre-occupied with much more pressing things, within the framework of Allied rivalries and intentions for the Greater Syrian region. Consequently, unrest and instability continued within Transjordan. Although proclaimed King of Syria by the General Syrian Congress in March 1920, Fayṣal was forced out of Syria in July 1920 under French pressure [see AL-SHĀM. 2. (b)]. It was his elder brother, ʿAbd Allāh, al-Ḥusayn's second son, who in November 1920 arrived at Maʿān and in February 1921 established himself in ʿAmmān as Amīr of Transjordan.

(c) *The modern period*

Tribesmen in central Jordan divide their history into two periods: "the age of *shaykhs*" and "the age of government". The age of government arrived decisively with the defeat of the Ottoman Empire in World War I, the division of the Fertile Crescent between Britain and France, and the creation of a British mandate for Palestine and Transjordan (renamed Jordan on independence in 1946). When the Amīr ʿAbd Allāh b. al-Ḥusayn [*q.v.*], the Sharīf Ḥusayn's [*q.v.*] second son, arrived in ʿAmmān [*q.v.*] in March 1921, ostensibly on his way to Damascus, the rudimentary British administration in the territory welcomed him. ʿAbd Allāh had a claim on British support owing to his father's alliance with Britain during World War I which produced the Arab Revolt; Britain needed to set up a governing structure in Transjordan which would not cost too much and which would fulfill its mandatory duty to train its mandated subjects in the art of self-government. They came to an agreement: ʿAbd Allāh stayed in ʿAmmān, and a British subsidy and a British-led and armed security force put him miles ahead of local tribal *shaykhs*.

The signs of modern statehood were developed during ʿAbd Allāh's period of rule, 1921-51: a capital (ʿAmmān), a flag, and territory delimited by recognised borders. Jordan's borders with its neighbours Syria and Irāḳ have remained firm to the present. Its border with Palestine/changed as a result of the 1948 and 1967 Arab-Israeli wars when Jordan came to rule and then lost the Palestinian territories known as East Jerusalem and the West Bank. In the 1960s the border with Saudi Arabia south of the Jordanian port of ʿAḳaba was adjusted slightly in favour of Jordan to allow for the development of Jordan's only port.

Within its present borders, Jordan comprises 36,165 square miles with average annual rainfall varying by region from 25 inches in the northwest corner to 0-10 inches in the eastern desert. Over 91% of Jordan is desert or semi-desert. It is entirely land-locked with the exception of the port of ʿAḳaba which gives access to the Red Sea. There are few resources: phosphates, potash, the skills and services provided by its population, transit rights for oil pipelines and goods carried by truck.

In 1920 the population of Transjordan was around 225,000, divided almost equally between peasants and herders. Arabs were by far the majority; there was also a small number of Turcomans, Chechens and Circassians who had fled their homelands in the Caucasus as Russian rule advanced southwards in the 19th century. The vast majority of inhabitants were Muslim; a small number of Arab Christians lived on the highlands overlooking the Jordan Valley. ʿAmmān was a very small, mainly Circassian settlement in 1921; the largest town was al-Salṭ [*q.v.*] with a population of around 20,000. In 1938 the total population of Transjordan was estimated at 300,000 (probably too low); at that time ʿAmmān and al-Salṭ each had a population of around 20,000.

During the rule of Amīr, later King, ʿAbd Allāh, an administrative and legislative structure on a European model gradually emerged. More important to Jordan's long-term existence were the creation of an army, the Arab Legion, under British command, and the registration of land along European lines of private ownership. The army put an end to tribal raiding within the state and across state borders, and replaced those traditional methods of the redistribution of wealth amongst nomadic tribes with work and welfare. Land registration carried out under British auspices in the 1930s created a grid of small landholdings largely held by those who farmed them. There did not develop in Transjordan large disparities of wealth based on landownership as in Egypt, Syria and ʿIrāḳ.

In 1946, when Transjordan was granted its independence by Britain, the Amīr ʿAbd Allāh became King ʿAbd Allāh, and the name of his kingdom was changed to the Hashemite Kingdom of Jordan (*al-Mamlaka al-Urdunniyya al-Hāshimiyya*). Britain continued to provide a subsidy to the state, and arms and officers to the army. In the 1948 Arab-Israeli war the army defended and occupied the Palestinian territories of the West Bank and East Jerusalem; they became part of Jordan in 1950. In 1951 King ʿAbd Allāh was assassinated by a Palestinian. He was succeeded by his eldest son Ṭalāl who abdicated in 1952 for reasons of mental incompetence. Ṭalāl was succeeded by his eldest son Ḥusayn (1935-99). King Ḥusayn's brother, Crown Prince Ḥasan, was his designated heir, but just before his death, he appointed his son ʿAbd Allāh as successor.

Jordan survived the regional turmoil of the 1950s owing to military and economic support from Britain and the United States. In 1957 American aid replaced British aid and the U.S. Sixth Fleet was sent to the shores of Lebanon in a demonstration of support for King Ḥusayn, who had been threatened by a coup d'état. In 1958 British paratroopers were sent to Jordan during the ʿIrāḳī revolution. Within Jordan a growing community of interests among army, governing élite, and king allowed for a concentration of power in the king's hands. The British commander of the Arab Legion, Sir John Bagot Glubb, was dismissed in 1956 and thereafter the officer corps was Jordanised. The army remained loyal to King Ḥusayn during the attempted coup in 1957, and since then power has remained firmly in royal hands. Jordan's participation in the 1967 Arab-Israeli war cost it the West Bank and East Jerusalem, which it lost to Israel, and, temporarily, U.S. aid. The subsequent growth of the military wing of the Palestine Liberation Organisation in Jordan led to a confrontation with the Jordanian army in 1970-1 which forced the PLO out of the country.

The 1970s and 80s was a period of economic boom and bust and of tight political control. Economic growth in the public sector was fuelled by foreign aid and governmental borrowing; growth in the private sector was thanks to remittances from Palestinian workers in the expanding oil economies of the Gulf to their families in Jordan. American aid was cut and replaced by Arab aid in 1978 when King Ḥusayn did not join in the Camp David negotiations between Egypt and Israel.

No elections were held and parliament did not sit from 1967 to 1984; political life was limited to jockeying for royal favour amongst a small élite. The door to political life was cautiously opened in 1984 with elections to fill parliamentary seats vacated by death since the last elections in 1967. In 1989 there were full parliamentary elections and since then elections have been held every four years. Elections have served to shift public perceptions of political responsibility from the king to his government in the recurrent economic crises since the bread riots of 1989. The monarchy is not, however, above politics and King Ḥusayn still retained control of all aspects of policy, internal and external. In the 1993 and 1997 elections, re-drawing of electoral boundaries gave rural constituencies loyal to the king unduly large representation. The official reasoning behind this imbalance was to give voice to "areas in Jordan which have long been

deprived of securing their basic needs." In political terms, reducing the representation of the ʿAmmān-Zarḳāʾ urban conglomerate which accounts for nearly half the country's population to only a quarter of the seats in parliament reduces the strength of the oppositional Islamist and Palestinian voices concentrated there. This encouragement of the nativist politics of the countryside in recent elections may, however, be of doubtful utility to the state and the monarchy in the long term.

The population of Jordan in 1996 was estimated at 4.38 million. ʿAmmān is the largest city by far with 1.2 million inhabitants; Zarḳāʾ is the next largest with 585,000. This ten-fold increase from an estimated 476,000 before the 1948 war is because of high rates of natural increase and the history of Palestine. With the end of the Palestine mandate and the creation of the state of Israel, Jordan gained the Palestinian territories of the West Bank and East Jerusalem and some 850,000 Palestinians; the territory of Jordan increased by about 6% and its population tripled. In 1967 while Jordan lost all Palestinian territory and some population, an estimated 300,000 Palestinians from the West Bank and East Jerusalem fled or were forced across the river to Jordan. In the wake of the Gulf War in 1991, another 300,000 Palestinians were forced out of Kuwait and ended up in Jordan. Since 1948 the proportion of Jordan's population with Palestinian roots has been assumed to be between 60 and 75% although no official numbers have ever been made available.

Jordan's changing demographic profile has had a profound impact on its politics and its economy. The lack of urban mass during the mandate contributed to the weak development of Arab nationalism in Jordan compared to neighbouring mandates. A distinct Jordanian sense of identity did not begin to develop in any meaningful way until significant numbers of Palestinians arrived in 1948 and began to compete for the resources of the state. State resources were spent on trying to settle and maintain Palestinian refugees in camps, but the country also benefited from the influx of capital of middle class Palestinians and from foreign aid directed towards Palestinians made destitute by the war. Jordan had only one government secondary school which offered a complete four-year curriculum (boys only), and the better educated Palestinians were an asset.

From the 1960s until 1990, remittances from Palestinians working in the expanding oil economies of the Gulf were an important source of capital and foreign exchange in Jordan. When these Palestinians were forced to leave the Gulf countries as a result of the 1990-1 Gulf War, their capital spurred a construction boom and the start-up of new businesses in Jordan. Although the loss of steady remittances could pose economic problems in the long term, Jordan's 1994 peace agreement with Israel and the mutual recognition of Israel and the PLO has created the possibility of regional economic development helped by international investment in the peace process.

(MARY C. WILSON)

ʿURF (A.), custom, customary law (also ʿĀDA, [*q.v.*]).

1. The status of custom in Islamic law

Custom was not one of the formal sources of law (*uṣūl*, sing. *aṣl*) in classical Islamic law. In practice, however, custom was frequently drawn on as a material source of law. Eventually, in the 16th century, it gained something close to formal recognition; but before that time attempts were made to incorporate custom in the law without granting it formal recognition, particularly (but not only) by Ḥanafī jurists.

Abū Yūsuf (d. 182/798), an early leader of the Ḥanafī school, was inclined to recognise custom (*ʿurf*) not as a formal source, but rather as part of the *sunna*, which in his view is based both on custom and on the practice of the Prophet (al-Sarak͟hsī, *K. al-Mabsūṭ*, Cairo 1324-31/1906-13, xii, 142, cf. also 138). This approach implies that custom can prevail over a written text (*naṣṣ*). Abū Yūsuf's position was rejected, however, by subsequent generations. The opposing position—which coloured much of the treatment of custom by Ḥanafī jurists—is expressed by al-Sarak͟hsī (d. 483/1090), who held that custom cannot prevail over a written text (*naṣṣ*) (*ibid.*, xii, 142, cf. also 138).

Essentially, Islamic law up to the 16th century resolved the tension between theory and practice by *de facto* recognition of the role of custom. This was achieved by several devices. One was recourse to other, legitimate, sources of law. A particularly important principle in this context was *istiḥsān* [*q.v.*], i.e. personal preference of a jurist: a given customary practice could be incorporated into the law, but the justification for doing so would be *istiḥsān*. This procedure had the further advantage that a ruling based on *istiḥsān* overrode one based on *ḳiyās*. Another principle used to the same end was *ḍarūra* "necessity", as invoked

in al-Sarakhsī's statement *wa 'l-ḥaradj madfūʿ sharʿan* ("a law that is unduly difficult for people to live with may be rejected by the *sharīʿa*"). Recourse to these principles was particularly frequent in the area of commercial law.

Custom could also be integrated into Islamic law by identifying it with *sunna* or *idjmāʿ*. Before the body of *ḥadīth* was finally closed (around the 11th century), there was in fact no need to accept custom as a formal source of law, for custom could still become part of *sunna* by finding expression in *ḥadīth*. For this reason, and because custom could still be identified with *idjmāʿ*, early legal texts almost never refer to custom in association with *istiḥsān*.

Muslim jurists could also include custom in the law on the basis of the principle that any lawful agreement between parties has legal force. For it could be said that custom is no more than an agreement between a large number of people, whence the common maxim *al-thābit bi 'l-ʿurf ka 'l-thābit bi 'l-sharṭ* ("what is established by virtue of custom is like what is established by virtue of an agreed condition"). The principle is invoked mainly in relation to the rights and duties of parties to contracts in a broad variety of areas: loans, hire, power of attorney, suretyship, damages, etc.

In the course of time, however, the quantity of material derived from custom reached such proportions that, from the late 13th century, custom began moving from the periphery of legal theory to become by the 16th century a virtually independent factor in Ḥanafī legal thought. Thus Zayn al-ʿĀbidīn Ibn Nudjaym (d. 970/1563) writes the words *wa-'ʿlam anna iʿtibār al-ʿāda wa 'l-ʿurf yurdjaʿ ilayh fi 'l-fikh fī masāʾil kathīra ḥattā djaʿalū dhālika aṣlan* ("know that custom and usage are so frequently taken into consideration in the law that they [the jurists] have made it a formal source") (*al-Ashbāh wa 'l-naẓāʾir*, Cairo 1378/1968, 93). Also, from the early 16th century onwards, special chapters on custom can be found in the legal literature, e.g. Ibn Nudjaym, *op. cit.*; Muḥammad Amīn Ibn ʿĀbidīn (d. 1252/1836), *al-ʿUrf*, in *Madjmūʿat rasāʾil Ibn ʿĀbidīn*.

The last stage in the process of recognising custom as a formal source is in a sense marked by the *Medjelle* [*q.v.*] (the Ottoman Civil Code promulgated in 1877), whose authors, following the work of 16th century jurists, compiled the main rulings concerning custom in ten articles that form part of the introduction; though it should be said that the *Medjelle* was not a code of religious law but of secular legislation. Modern scholars of Muslim law generally devote a chapter on custom along with their writing on the classical sources. This seems to imply that they consider custom a source of law as well (e.g. Shawkī ʿAbduh al-Sāhī, *al-Madkhal li 'l-dirāsat al-fikh al-islāmī*, Cairo 1989, 295).

Bibliography (in addition to works mentioned in the article): Comments are scattered through the classical literature, see e.g. Suyūṭī, *al-Ashbāh wa 'l-naẓāʾir*, Beirut 1990, 89-101. A comprehensive modern work is Aḥmad Abū Sinna, *al-ʿUrf wa 'l-ʿāda fī raʾy al-fukahāʾ*, Cairo 1947. For the Mālikī school, see ʿUmar b. ʿAbd al-Karīm Djīdī, *al-ʿUrf wa 'l-ʿamal fi 'l-madhhab al-mālikī*, Rabat 1982; H. Toledano, *Judicial practice and family law in Morocco*, Boulder, Colo. 1981. Libson, *On the development of custom as a source of law in Islamic Law*, in *ILS*, iv (1997). On attempts to incorporate custom into Islamic law, see A.L. Udovitch, *Islamic law and the social context of exchange in the medieval Middle East*, in *History and Anthropology*, i (1985), 445-65. (G. Libson)

2. Arab customary law (for other customary legal systems, see s.v. ʿĀDA)

I. *Regional features*

Information about Arab customary law is very unevenly distributed. Most of North Africa is from this point of view terra incognita, and even the customary legal systems of southern Arabia, which were particularly highly developed, and for which many unpublished documents survive, remain largely unknown. Among the areas for which there is relatively good published information we may distinguish (mainly on the basis of procedural differences) the following groupings (within each of which there are also local differences):

A. The Mashriḳ

1. The Bedouin, and many of the sedentary people, of what will be called the Central Region. This includes Sinai (to which the account that follows especially applies), Palestine, Jordan, and parts of the Syrian Desert and northern Arabia. In the legal systems of this region, the parties to a dispute must first reach agreement on a precise definition of the issue(s) in dispute between them (including who will be plaintiff, *ṭālib*, and who defendant, *maṭlūb*, with regard to each issue) and on the identity of the justiciar (*ḳāḍī* in some communities, *ʿārif(a)* in others) who is to hear the case. The justiciar has some of the characteristics of a judge (his decisions can be used as precedents and trials are normally public) and some of those of an arbitrator (he has only such powers as are given to him by the parties). The parties are free to ask anyone they want to act as the justiciar in their case; but they will usually select someone from a pool of men in the community who are recognised as justiciars, by virtue either of frequently acting as such, or of having been formally appointed as such, e.g. by a gathering of the elders of the tribe. There are also certain descent groups which by tradition supply certain specialised types of justiciar: thus through much of this region justiciars for cases involving *ʿirḍ* "honour" [*q.v.*] traditionally come from a certain group within the Masāʿīd tribe, while those for cases involving physical violence come from a certain group within the Balī tribe. These hereditary justiciars are considered the highest authority (*manhā*) for the settlement of disputes relating to their respective specialities; such disputes can also be settled, however, with the consent of the parties, by local justiciars.

Each party promises the other to appear before the justiciar (usually at his home) on an agreed date; the defendant promises the plaintiff to execute any judgement there may be against him, and the plaintiff promises the defendant not to sue again on the same claim if the proceedings result in victory for the defendant. Each promise is given legal effect by means of a tripartite contract involving promisor, promisee and a guarantor. This transaction is the standard form of contract in these systems; it takes the place of the bipartite contract that is familiar to us, and is used in many contexts. It gives the promisee an effective sanction against the guarantor in the event that the promiser fails to perform (see below).

The proceedings before the justiciar are adversarial; parties may be represented by an attorney (*kabīr*). The justiciar is entitled to a fee (*rizḳa*) from each party; the losing party must afterwards reimburse the

victorious party for this payment. The plaintiff makes a formal pleading (*ḥidjdja*), the defendant responds with his *ḥidjdja*, the justiciar formally summarises the pleadings, there follows informal discussion in which all those present may participate, and finally the justiciar renders a formal judgement (*ḥakk*) in which he finds for either plaintiff or defendant. Each party must then formally state either that it accepts the judgement, or that it wants the case tried again before another justiciar. In all, a case may be tried by up to three successive justiciars, but as soon as two judgements coincide, the matter is concluded.

If the plaintiff wins, the justiciar may order the defendant to pay amends to the plaintiff, or he may order the defendant to make symbolic amends (e.g. by publicly retracting a defamatory statement), or both; he may also order the defendant to undertake some other action, e.g. divorce his wife or hand over possession of a piece of land. Awards are often substantial, sometimes even ludicrous, and a victorious plaintiff will frequently renounce part or even all of the material amends due to him. The justiciar's responsibilities end with his judgement; if the defendant shows signs of trying to evade execution, then the defendant's guarantor has a duty to the plaintiff either to ensure that the defendant does what he is supposed to do or (as far as possible) to do it in his stead.

2. The sedentary tribes and the Bedouin of Northern Yemen. The evidence here is less extensive than for the Central Region (there is, for example, no adequate first-hand account of a trial in the literature), but it appears that the proceedings are broadly similar: the parties agree on the identity of a justiciar (*muḥakkam* or *mukawwil*), and exchange promises that are given legal force by means of guaranties. It is normally a chief (*naḳīb* or *shaykh* at the higher levels, *ʿāḳil* at the lowest level) who acts as justiciar; in this there is a marked contrast with the Central Region, where the office of justiciar is usually quite distinct from that of *shaykh* (though a *shaykh* may at times act as a justiciar). Yemeni procedure differs from procedure in the Central Region in that the parties give promises not only to each other, but also to the justiciar: not to sabotage the proceedings (e.g. by attacking each other or by attacking the justiciar himself) and to carry out his decision. Each party accompanies its promises with a pledge, usually in the form of guns (*banādiḳ al-ʿadāl/al-muṣaffī/al-naṣaf*) deposited with the justiciar; the pledges are returned to the parties if they keep their promises; if they do not, the guns can presumably be redeemed only by some kind of payment to the justiciar (this being distinct from the fee, *udjra*, that he may receive). Other procedures are like those in the Central Region: a case may be tried several times, each time before a different justiciar; there are justiciars (known in the Yemen as *marāgha* or *furūʿ*) who possess special high authority (the term *manhā* is also used in this context); and a litigant who demands a retrial must get permission for it from the justiciar whose decision he is rejecting. This permission is given in Yemen only in exchange for a pledge (*banādiḳ al-djarr/al-kasr/al-miyya/al-taʿkīs/al-taʿkīẓ*). In some areas, at least, the pledge only has to be redeemed by a payment if the next justiciar confirms his predecessor's decision. A characteristic feature of North Yemeni law is the slaughter of an animal (*ʿaḳīra*), ideally a bull, as a gesture of conciliation or supplication; a similar practice is widespread in Morocco [see ʿĀR, in Suppl.], but exists only in a very limited way elsewhere in the Mashriḳ.

3. The semi-sedentary tribes of lower ʿIrāḳ (where, in contrast to the other three regions, it seems likely that customary law has largely disappeared). Here too we find the justiciar (*farīḍ(a)*, pl. *farāḍa*, or *ʿārif*, pl. *aʿrāf*, *ʿurrāf*) as a distinct office, and here, too, the man appointed is said to be chosen by the parties. But the institution of guarantor, so important elsewhere in the Mashriḳ, was apparently unknown, or at least rarely used. This may be connected with the fact that in many places there were powerful *shaykhs*, of a kind not common in the Central Region or Yemen, who could ensure that the parties fulfilled all their forensic obligations (and who might themselves act as justiciars). Most trials presumably took place in the tribal guest-house (*muḍīf*); the exact procedures have not been described. Re-trials were evidently not uncommon, but the notion of specialised justiciars possessing higher authority than ordinary ones seems to be absent.

From early in the 20th century, in Egypt and in the Fertile Crescent (but not in the Yemen), governments issued regulations setting up special courts that administered customary law in those regions where it seemed appropriate. These courts were mostly abolished during the third quarter of the century. The judges in the state customary law courts were usually local men, and their decisions were based largely on the traditional law of the area of their jurisdiction. The procedures followed in these courts were, however, generally new and alien. The tribal law courts seem to have been particularly well-established in ʿIrāḳ (where their beginnings go back to the late Ottoman period), and it is not always easy to distinguish in the literature on ʿIrāḳ between autochthonous procedures and those introduced by the authorities.

B. The Maghrib

Procedures of the type that have just been described, in which disputes are tried in a formal public hearing before one man, do not seem to be attested as a common mode of dispute settlement in the customary law of any Arabic-speaking community in North Africa. Here disputes are settled by other means, for instance by negotiation, by mediation or by decision of a council (*djamāʿa* [*q.v.*, esp. ii.]). We find such councils among, for instance, the Rgaybāt of the Western Sahara and the Dhwī Mnīʿ (Doui Menia) of eastern Morocco. Judicial councils are evidently the result of Berber influence, and are not attested in the Mashriḳ.

The Bedouin of the Western Desert and Cyrenaica are the only North African Arabs whose customary law (*darāʾib*, *ʿawāʾid*) is well documented. Disputes are settled by a variety of informal means, normally in private; the word *miʿād*, which in the Central Area and in Yemen refers to a trial, here means "merely a gathering of all interested parties and anyone else who wishes to attend, in which the agreement reached behind the scenes by means of negotiations is announced" (Safia Mohsen, *Quest for order among Awlad Ali*, Ph.D. diss., Michigan State University 1971, 61). The term *marḍī* (pl. *marāḍī*), which is peculiar to this region, though glossed in some sources as "judge", actually refers to a mediator (Mohsen, 86-7); one or more *marāḍī* are on occasion appointed as arbitrators by the parties. Guarantors are unknown.

II. *General features*

In the communities where customary law is important, public authority is generally weak or non-existent. A man relies for the defence of his interests on one or another of the groups to which he belongs: for

example, tribe, blood-money group, or section of the blood-money group [see further THA'R]. One usually becomes a member of such a group by virtue of the fact that one's father was a member, although in many places the possibility also exists of formally moving from one group to another. Since a man is so dependent on his group, and since the group is liable for many of a man's actions, disputes between individuals tend to develop into disputes between groups.

Women (like children) rarely take any public part in the process of dispute resolution. In many communities they are for all practical purposes stripped of legal personality. For legal purposes, a woman must generally be represented by a man; this may extend to the point where she is not allowed to testify in court, and it is he who must report her testimony, and if need be take an oath as to its veracity.

It is characteristic of traditional Arab communities that a woman's ties with her natal agnatic group are stronger in many ways than her ties with her husband (and this seems to have been true already in the Djāhiliyya). Even after marriage, her natal group often retains legal responsibility for her. This is reflected in the emphasis placed on the relationship between brother and sister. When a woman must be represented in court in some capacity, then it will generally not be her husband, but her closest adult male agnate (her *walī* "guardian" [see NIKĀḤ. I. 3]) who will undertake this responsibility; and if she is guilty of some misdeed, it is her agnates who will pay for it.

Marriage generally appears as a contract between the woman's guardian and her husband. It gives the husband important rights (notably to the wife's labour and to her children by him), but if the woman receives contradictory orders from husband and guardian, it is usually the guardian whom she will obey. A woman's guardian can in many places kill or beat her with impunity, at least when she is not married; her husband can at most only beat her, and even on this there may be severe limits. The guardian is a woman's main defence against mistreatment by her husband; it is to him that she will usually flee if she wants her husband to divorce her; and if the marriage ends, she will, except in special circumstances, return to her guardian's home.

A sexual offence against a woman is generally viewed as an offence against the *'irḍ* "honour" of her agnates. The notion of a sexual offence is often broadly defined, and may include any activity, even a flirtatious conversation, which has sexual overtones. The fact that the woman has consented does not obviate the offence, though it may mitigate the penalty. Adultery is in the law primarily an offence against the *'irḍ* of the woman's guardian; in some communities (e.g. in the Central Region) the husband gets no amends; in some he gets amends only if he divorces the wife (a common rule in 'Irāḳ); and in a few (e.g. in the Western Desert) he always has a right to amends, though the sum may not be large. In a number of places an unchaste woman is in real danger of being killed by her agnates; but this is not universal, and we can also find groups, e.g. some sections of the Ouled Naïl and the Amour of Algeria, which were notoriously permissive.

'Irḍ is not only sexual honour. A man's *'irḍ* is pledged when he extends his protection, e.g. to a guest (*ḍayf*, in Yemen also *maṭī'*), to a protégé (*djār*, *ṭanīb*, *ḳaṣīr*; in the Western Desert *nazīl*, and in southern Arabia *ẓabīn*, *ḳaṭīr*, *rabī'*), and when he acts as a travelling companion (*rafīḳ*, *khawī*, also *musīr* in 'Irāḳ, *sayyir* in Yemen, and *ẓaṭṭāṭ* in Morocco), especially in his own tribal territory. In this context, *'irḍ* itself, or the protection to which the protector pledges his *'irḍ*, is often referred to in the Mashriḳ as *wadjh* "face." Protection may also be extended to inanimate objects (e.g. to pastureland or to camels belonging to one party that are under threat of seizure by another). An offence against a protected person is also an offence against the protector, so that the offender will be liable to pay amends to both.

One who violates his *'irḍ* obligations, for instance by failing to defend (or worse still, harming) a protégé, brings upon himself deep dishonour. This is the sanction that makes the tripartite contract so effective, for a guarantor pledges his honour. Both in the Central Region and in Northern Yemen, if a man has failed to keep an obligation of honour, for instance a guaranty, then the victim of this failure has formal means by which to make the fact public, for instance, by saying "May God blacken so-and-so's face", or by flying a black flag and explaining why.

The amends for offences against a man's *'irḍ*—whether by sexual interference with his ward, or by harming his protégé, or (where blackening exists) by wrongfully blackening him—are generally heavy. Lighter penalties exist for other types of affronts to dignity, e.g. verbal insults or blows which cause no significant physical injury. Amends for offences against honour (whether under the name of *'irḍ* or otherwise) often have a special name: *kabāra* and *ma'tab* in the Western Desert and Cyrenaica, *hashm* in 'Irāḳ, *hashm* and also *'ayb* in Northern Yemen, *manshad* (only for *'irḍ* offences) in parts of the Central Region. The *kabāra*, and perhaps the *hashm*, are often imposed in addition to amends of some other kind, e.g. blood-money. Blood-money groups frequently have a rule that if a member is found guilty of an honour offence he must pay the penalty out of his own pocket.

Whatever the offence, a finding for the plaintiff will usually result in the defendant paying amends to the plaintiff and/or being ordered to perform some action for the benefit of the plaintiff (as noted above at the end of section I.1). Sometimes the defendant may be condemned to suffer physical punishment, but this is probably always merely notional (unless there is some public authority), and is in practice commuted to a payment to the plaintiff. In 'Irāḳ, and apparently only in 'Irāḳ, it was common practice for amends to be in the form of one or more women handed over as brides to the plaintiff's group; elsewhere, women were handed over in this way only as part of the settlement for a homicide, and although the practice is widely attested, it was probably nowhere very common.

The notion of a penalty imposed by a public authority seems to exist in the Mashriḳ only where there is a relatively powerful ruler. Thus there were tribes in 'Irāḳ in which the *shaykh* could fine and even jail a miscreant. The institution of a fine payable to a body representing the community, which is prominent in Berber customary law, is virtually unknown in the Mashriḳ; but it has been recorded among the Arabic-speaking (though originally Berber) tribes of southern Tunisia, and may possibly have been common in the Maghrib.

The law usually allows homicide and bodily injury to be settled by retaliation, often by any member of the victim's vengeance group against any member of the perpetrator's. In practice, however, most such offences are resolved by payment of amends after the victim's group has agreed to a truce. In some places there are experts (the *ḳaṣṣāṣ* in parts of the Central Region, the *mu'arrish* in the Yemen, the *naẓẓār* in the

Western Desert) who determine the amount due for a particular injury. The *diya* [*q.v.*] for homicide usually varies according to sex: a woman is in some places worth only half a man, in others twice or even four times as much. In most of the Central Region the *diya* for all men is the same; in ʿIrāḳ, shaykhly families usually have much higher blood-money than ordinary men; in certain regions there are inferior groups members of which have lower *diyas* than members of artistocratic groups; and in many places *shurafāʾ* or *sāda* have a higher *diya* than others. The amount of blood-money due usually varies according to the circumstances of the homicide—whether intentional or not, whether in self-defence, whether the killer attempted to conceal the fact that he did the deed, and so on.

Each blood-money group has its own rules as to how much it contributes towards the payment of blood-money due from a member, and how it distributes blood-money received by a member. Often a man pays a third or a quarter out of his own pocket, and the other members contribute equally towards the balance; and an analogous rule may apply to the distribution of blood-money received.

The communities in a given region often view themselves as legally autonomous units. Each tribe may have its own laws, which may differ somewhat from those of its neighbours. The customary law does not enjoy supernatural authority, and the community can change its law if it so wishes, usually by means of a consensus reached at a gathering of leading men. We know, for instance, of communities in ʿIrāḳ, in the Central Region, and in the Western Desert, that have in the present century changed the old rules that allowed an *ibn ʿamm* to control in some way the marriage of his *bint ʿamm*.

The law recognises not only individuals but also corporate entities, notably the blood-money group and the tribe. Each such entity has at least one authorised representative—its *shaykh* or elder (*kabīr*, also *ʿāḳil* in the Yemen, *ʿāḳila* in the Western Desert). Disputes between tribes, e.g. over territory, may be dealt with by negotiation, by litigation, or by war—but in all cases, within a framework of law. This is possible because within a given region there is a generally recognised body of law dealing with inter-tribal relations, and often also men whose probity and legal expertise are universally acknowledged and who can be called on to act as justiciars in litigation between tribes.

Customary law seems in most places to be personal rather than territorial. So, for instance, robbery is prohibited among members of the autonomous legal unit, say the tribe; but a stranger who enters tribal territory is not, by virtue of having done so, protected by this law. In order to enjoy such protection, a stranger must enter into an appropriate legal relationship with a member of the tribe who has authority to extend such protection. The stranger can do so, for intance, by becoming a protégé of a tribesman or by acquiring a tribesman as a travelling companion.

The *ʿurf* is markedly rational. Although belief in witchcraft, the evil eye, and the like, exists to some degree in many traditional Arab communities, these are not matters which lead to litigation; the contrast with, say, customary law in sub-Saharan Africa is striking. Where possible, decisions are based on natural evidence (testimony, footprints, written documents, etc.). Oaths (individual or collective) are generally resorted to only in the absence of such evidence; and this is true also of ordeals, found only in the Mashriḳ. The most common is the fire-ordeal (*bishʿa, balʿa*), widely used in the Central Region and southern Arabia.

The relationship between the *ʿurf* and the *sharīʿa* varies greatly from place to place. Among many Bedouin tribes of the Central Region the law does not appear to have been influenced by the *sharīʿa*; even marriage and divorce are, both in form and in substance, quite different from the corresponding institutions in Islamic law. In North Africa, in contrast, the *ʿurf* often shows clear Islamic influences; for instance, the *naẓẓār* in the Western Desert, in assessing the amends due for an injury, refers to written sources that reflect Islamic law.

Often enough, both customary law and Islamic law are in use in the same community, each administered by its own judicial apparatus. Thus in the ʿIrāḳī village in the earlier part of this century, the *mūman* would deal with matters of marriage, divorce and inheritance in accordance with Shīʿī law (as far as his knowledge of it went), while the *shaykh* awarded *faṣliyyāt* (women given as amends) in decisions about blood-money or honour that he made in accordance with the *ʿurf*. This kind of coexistence—and it would appear, generally peaceful coexistence—of the two systems was also to be found in many places in southern Arabia and North Africa. Each law confined itself to a particular area of life (the division varying from place to place), and it was only exceptionally (as under the Wahhābīs) that the religious authorities attacked the *ʿurf* on all fronts.

This article has dealt with the customary law of those communities in which the *ʿurf* regulated broad areas of social life; but it should be added that many professions also had their own specialised *ʿurf*. The best-known example is the body of customary law that governed the pearl fisheries of the Gulf, which in its time was "enforced in every Arab principality by a tribunal known as the *sālifat al-ghawṣ*" (J.G. Lorimer, *Gazetteer of the Persian Gulf*, Calcutta 1908-15, i, 2234).

For a variety of reasons, Arab customary law has been largely neglected by scholars, whether in the East or the West. But we should not allow this to mislead us as to its importance in the real world. During many centuries, the great majority of the Arab people lived outside the cities; and for most of these people the *ʿurf* was a more important determinant of their daily lives than the *sharīʿa* (or indeed any other law). Disputes are common in most non-urban Arab communities, and there is often a marked sense that a true man is one who will not tolerate the slightest infringement of his rights—a feeling that applies equally to groups. There is also often (at least in the Mashriḳ) a very legalistic mentality, one that demands conceptual clarity, that is sensitive to fine logical distinctions, that delights in argument, and that will push a line of reasoning to its utmost extreme. It is perhaps not surprising, then, that the *ʿurf* of the Central Region and the Yemen is markedly more sophisticated than anything that we know from other societies around the world which lack strong central authority. The customary law is, in fact, one of the most impressive, if one of the least appreciated, achievements of Arab folk culture.

URFA [see AL-RUHĀ].

ʿURFĪ SHĪRĀZĪ, Persian poet of the later 10th/16th century (d. 999/1591); the earliest sources give his name as Djamāl al-Dīn Muḥammad Sīdī (= Sayyidī).

He was born in Shīrāz in 963/1555-6 to an official of the provincial judiciary, Zayn al-Dīn ʿAlī Balawī, taking his *takhalluṣ* from his father's work with matters of customary law (*ʿurf*). ʿUrfī became a leading figure in the literary life of the city. Awḥadī Balyānī provides a first-hand account of the poetic circle of Mīr Maḥmūd-i Ṭarḥī, where ʿUrfī vied with poets such as Ghayratī (see Gulčīn-i Maʿānī, *Kārwān-i Hind*, ii, 959-69) in composing responses to the *ghazals* of Bābā Fighānī [*q.v.*]. ʿUrfī's literary fame soon spread across Persia. His talent was recognised by Muḥtasham-i Kāshānī, and he corresponded with Waḥshī-i Bāfḳī [*q.vv.*]. Like many of his contemporaries, ʿUrfī was attracted by the rich patronage of the Mughal courts and sailed for India in 992/1584. Although he proved his talent in the literary circle of Aḥmadnagar, his arrogance soon made him unwelcome, and he moved on to the imperial capital of Fatḥpūr Sīkrī. There he was well received by Fayḍī [*q.v.*], the leading poet of Akbar's court, whom ʿUrfī accompanied on campaign to the Pandjāb in 994/1585. Through Fayḍī, ʿUrfī became acquainted with Masīḥ al-Dīn Ḥakīm Abu 'l-Fatḥ Gīlānī (see Gulčīn-i Maʿānī, *op. cit.*, i, 13-15), who, until his death in 997/1589-90, was the poet's principal supporter and patron. ʿUrfī then joined the entourage of the Mughal statesman, general, and patron of letters Mīrzā ʿAbd al-Raḥīm Khān-i Khānān [*q.v.*]. He held ʿUrfī in great esteem and introduced him into the service of Akbar and his son Salīm (later Djahāngīr [*q.v.*]). ʿUrfī did not enjoy his new status for long: he died of dysentery in Lahore in Shawwāl 999/August 1591. Some thirty years later, his remains were disinterred and reburied in Nadjaf.

Despite dying young, ʿUrfī had a great impact on his contemporaries through the force of both his personality and his poetry. Perhaps in part because he was disfigured by smallpox in his twenties, ʿUrfī was hypersensitive, quick to take offence and to return the same with a ready wit and sharp tongue. Massively self-conceited, ʿUrfī judged his poetry superior not only to that of his contemporaries but to that of the greatest masters of the past. Even the normally mild-mannered Naẓīrī [*q.v.*] found occasion to condemn ʿUrfī's arrogance. However exaggerated, ʿUrfī's lofty estimation of his own talents was not unfounded. His poetry enjoyed great popularity in his lifetime throughout the Persian-speaking world and played a crucial role in the development of the *shīwa-yi tāza* ("fresh style," now commonly called the "Indian style"). His style has been praised for its forceful, yet fluent diction, the invention of new expressions, continuity of theme, and innovative similes and metaphors.

Among ʿUrfī's works, his *ḳaṣīda*s have met with the greatest critical acclaim. They have perhaps unjustly overshadowed his *ghazals*, which often demonstrate a powerful command of language and subtlety of thought and imagery. His *dīwān* also includes *ḳiṭʿa*s and *rubāʿī*s. ʿUrfī composed a short *sāḳī-nāma* and began work on two other *mathnawī*s, *Madjmaʿ al-abkār* and *Farhād wa Shīrīn*, but both remained unfinished at his death. He also wrote a short prose treatise entitled *Nafsiyya*. Despite his talent and significance, the text and contents of ʿUrfī's *dīwān* remain unsettled. ʿUrfī collected and disseminated his own works in 996/1588. On his death, he handed his manuscripts over to the library of ʿAbd al-Raḥīm Khān-i Khānān, and these were assembled and edited by the poet Sirādjā-yi Iṣfahānī and disseminated with an introduction by ʿAbd al-Bāḳī Nahāwandī in 1024/1615. Muhammad Ali has cast doubt on the authenticity of many of the *ghazals* in this version of the *dīwān*; his judgement is based on literary quality and not on philological grounds and has been questioned by Gulčīn-i Maʿānī (*Maykhāna*, 215 n. 2) and Muḥammad al-Ḥaḳḳ Anṣārī. In an important series of essays, Anṣārī has uncovered a number of previously unpublished works and laid the foundation for a scholarly edition of ʿUrfī's works.

Bibliography: For a list of *tadhkira* sources, see Dh. Ṣafā, *Tārīkh-i adabiyyāt dar Īrān*, Tehran 1364 *sh.*/1985, v/2, 799-814. The most important of these sources are collected and quoted at length in A. Gulčīn-i Maʿānī, *Kārwān-i Hind*, Mashhad 1369 *sh.*/1990, ii, 872-90 (including the otherwise unpublished notices on ʿUrfī from Awḥadī Balyānī's *ʿArafāt al-ʿāshiḳīn* and Taḳī Kāshī's *Khulāṣat al-shuʿarāʾ*). See also Fakhr al-Zamānī Ḳazwīnī, *Tadhkira-yi Maykhāna*, ed. Gulčīn-i Maʿānī, Tehran 1340 *sh.*/1961, 215-34. Among the secondary sources, see Browne, *LHP*, iv, 241-9; M. Shiblī-Nuʿmānī, *Shiʿr al-ʿAdjam*, tr. M.T. Fakhr-i Dāʿī Gīlānī, Tehran 1334 *sh.*/1955, iii, 66-111; Muhammad Ali, *ʿUrfī of Shīrāz*, in *IC*, iii (1929), 96-125; Rypka, *Hist. of Iranian literature*, 299; and M. al-Ḥ. Anṣārī, *ʿUrfī Shīrāzī*, Lucknow 1974 (in Urdu). For a listing of the many, widely dispersed manuscripts of ʿUrfī's works, see A. Munzawī, *Fihrist-i nuskhahā-yi khaṭṭī-yi Fārsī*, iii, 1881-3 (*kulliyyāt*) and 2437-42 (*dīwān*). His *dīwān* and *ḳaṣāʾid* have been frequently lithographed in India; for a full listing, see *Fihrist-i kitābhā-yi čāpī-yi Fārsī*, i, col. 1550, and ii, cols. 2533-4. A printed edition of the *dīwān*, edited by Ghulām Ḥusayn Djawāhirī Wadjdī, was published in Tehran in 1339 *sh.*/1960. (P.E. Losensky)

ÜRGENČ, a city in the delta region of the Amū Daryā [*q.v.*] or Oxus river of Khʷārazm [*q.v.*] which was for some four centuries, from Mongol times onwards, the capital of the province.

After the Mongols had totally destroyed the former capital of Khʷārazm, Gurgandj [*q.v.*] in 618/1221, the conquerors founded a new city on a nearby site, presumably that of "Little Gurgandj", three *farsakhs* from the old capital. Under the *pax mongolica*, Ürgenč speedily became a populous and flourishing commercial centre (see Barthold, *Turkestan down to the Mongol invasion*, 457; idem, *A short history of Turkestan*, in *Four studies on the history of Central Asia*, i, Leiden 1956, 44). The Great Khān Ögedey's governor of Khurāsān, Čin Temür, had previously been *baskak* or governor of Khʷārazm with his seat at Ürgenč (Djuwaynī-Boyle, ii, 482, 491). European travellers at this time speak of Ürgenč's brisk trading activity, and it was also a cultural centre, where Muʿtazilī scholars worked until

the late 8th/14th century and where some vernacular Turkish religious literature developed (Barthold, *A short history of Turkestan*, 55-6). It straddled both banks of the Oxus, or of one of its channels, the two halves being connected by a bridge (Abu 'l-Ghāzī, cited in Barthold, *Turkestan*, *loc. cit.*). Ibn Baṭṭūṭa was there in 735/1335 and describes it as the biggest and most important city of the Turks, with fine mosques and other public buildings (*Riḥla*, iii, 3-4, tr. Gibb, iii, 541-2).

It suffered badly in Tīmūrid times, since Khwārazm rebelled against Tīmūr several times, and in 790/1388 Tīmūr razed it to the ground, except for the mosques and minarets, and transported the population to Samarḳand. Only 793/1391 did he allow the restoration of a single one of its quarters, but in fact the city soon flourished again.

In the early 11th/17th century, after a change of course in the Oxus channels once more, the 'Arabshāhid rulers of Khwārazm transferred the capital to Khīwa [*q.v.*], but a New Ürgenč was founded not far from Khīwa and soon became a significant commercial centre (Barthold, *A short history of Turkestan*, 66). Then in the early 19th century, *ca.* 1831, the present-day town of Kunya (< Kuhna "Old") Ürgenč was re-founded, giving a new lease of life to what had been the original, old Ürgenč. In Soviet times, Ürgenč was the chef-lieu of the Khorezm *oblast* of the Uzbek S.S.R., and in 1970 had a population of 76,000; this is now a town of the present-day Uzbekistan Republic (lat. 41° 35' N., long. 60° 41' E.).

URGHAN, Urghanūn, the artificially wind-blown musical instrument known as the organ. It also stood for a certain stringed instrument of the Greeks like the ὄργανον of Plato (*Republ.*, 399c); see al-Mas'ūdī, *Murūdj*, viii, 91 = § 3216, where the *urghan* is a stringed instrument, and the *urghanūn* is an artificially wind-blown instrument. The word was used by the Persians, it would seem (*Burhān-i ḳāṭi'*), to denote a species of vocal composition somewhat similar to the mediæval European *organum*. Of the artificially wind-fed musical instruments, the Muslims were acquainted with two types, the pneumatic organ and the hydraulic organ, the latter being known in two forms, an hydraulic air compressor and an hydraulic pressure stabiliser. Both Plato (*Burhān-i ḳāṭi'*) and Aristotle (Ḥādjdjī Khalīfa, vi, 258; Fakhr al-Dīn al-Rāzī, fol. 154b) are considered by Muslim writers to have invented the organ, although there is the claim of Mūrisṭus [*q.v.*] to be considered.

We read of an *urghan* (text, *'.r.'.n*) in the *Kitāb al-Aghānī* (ed. Sasi, ix, 90) as early as the time of al-Mahdī's daughter 'Ulayya (d. 210/825), and Ibn Khurradādhbih mentions it (*Murūdj*, *loc. cit.*) in an oration before the caliph al-Mu'tamid (d. 279/893), and in both cases the instrument is referred to as stemming from the Byzantines. For later references, see the *Kitāb al-A'lāḳ al-nafīsa* of Ibn Rusta (123), where it is written *urḳanā* (cf. *'r.ḳ.nū* in Dozy); the *Mafātīḥ al-'ulūm* (236) as the *urghānūn*; the Ikhwān al-Ṣafā' (Bombay ed., i, 97) who describe an hydraulis; the *Fihrist* (270, 285); the 10th century Syriac-Arabic lexicographers (Payne-Smith, *Thes. Syr.*, 977-8); Ibn Sīnā, in the *Shifā'* (fol. 173) and the *Rasā'il fi 'l-Ḥikma* (77) which has *'r.gh.l* instead of *'r.gh.n* (cf. the modern *ārghūl*, in *MFOB*, vi, 29; and *ārghul* in Freytag, *Chrest.*, 74); Ibn Zayla in his *Kitāb al-Kāfī* (fol. 235b); the 5th/11th century *Glossarium latino-arabicum* (563: *warghan*); Ibn Ḥazm in Spain (*Safīnat al-mulk*, 473); Ibn Abī Uṣaybi'a (ii, 155, 163), who gives the names of Arab organ constructors; al-Āmūlī in the *Nafā'is al-funūn* (fol. 439b); Ibn Ghaybī, in the *Djāmi' al-alḥān* (fol. 78); and Ewliyā' Čelebi (*Travels*, i/2, 226). In the *Fihrist* (270, cf. 285), Mūrṭus or Mūrisṭus is given as the author of works on the flue-pipe organ (*urghanūn al-būḳī*) and reed-pipe organ (*urghanūn al-zamrī*). This notice is also given by Ibn al-Ḳifṭī (322) and Abu 'l-Fidā' (*Ta'rīkh Mukhtaṣar al-bashar*, 156).

The pneumatic organ. The instrument mentioned in the *Kitāb al-Aghānī*, *loc. cit.*, was probably a pneumatic organ. That which is described by Mūrisṭus is a very primitive type of instrument in which the bellows are inflated by the mouth, a method which, prior to the discovery of the Mūrisṭus treatises, was hitherto only surmised (*Encyclopædia Britannica*, 11th ed., xx, 266). Mūrisṭus calls it the *urghanūn al-zamrī*, i.e. the reed-pipe organ. The organ described by Ibn Ghaybī is the type known as the portative.

The hydraulic organ (hydraulic air compressor) became known to the Muslims through the Arabic versions of Philo's "Pneumatics" (*Kitāb Fīlūn fi 'l-ḥiyal al-rūḥāniyya wa-mikhānīḳā al-mā'*), Hero's "Pneumatics" and "Mechanics" (*Kitāb al-Ḥiyal al-rūḥāniyya*) and the "Automatic Wind Instrumentalist" (*San'at ālat al-zāmir*) of Archimedes and Apollonius of Perga. On this principle, the Banū Mūsā [*q.v.*] devised their automatic organ which is described in a treatise entitled "The Instrument which plays by itself" (*al-Ālat allatī tuzammir bi-nafsihā*). The text of the latter, edited by M. Collangettes, appeared in *Machriq*, ix, 444, whilst translations were made by Wiedemann (German) and Farmer (English).

The hydraulic organ (hydraulic pressure stabiliser). This was the hydraulis, an instrument which is first referred to in Arabic (although not mentioned by name) in the Pseudo-Aristotelian *Kitāb al-Siyāsa*, translated from the Greek via the Syriac by Yuḥannā b. al-Baṭrīḳ (d. 199/815). Here it is a warlike instrument which could be heard sixty miles away (cf. Farmer, *Studies in Oriental musical instruments*, ch. 3, p. 27, for an edited text and translation). The instrument is fully described by Mūrisṭus, and the type is certainly anterior to those dealt with by either Hero or Vitruvius.

At no period of Muslim history in the East was the organ considered an instrument of music in the same sense as the *'ūd* (lute), *nāy* (flute), *ḳānūn* (psaltery), *kamāndja* (viol), or *duff* (tambourine; for Muslim Spain cf. *Safīnat al-mulk*, 473). It was probably only accepted as one of the many interesting mechanical devices (*ḥiyal*) such as the clepsydra, the musical tree, and other marvels which became popular from the time of Hārūn al-Rashīd [*q.v.*] onwards (see Hauser, *Über das Kitāb al-Ḥijal*..., Erlangen 1922; *Isl.*, viii, 55). At the same time, it is highly probable that the Muslims were the cause of the hydraulis being re-adopted in the East, and perhaps in the West. In Byzantium, the hydraulis appears to have died out. The principle of the hydraulic pressure stabiliser had been superseded by the barystathmic principle of the weighted blast-bag as in the pneumatic organ. When, at the close of the 8th or beginning of the 9th century A.D., the Muslims began to build the hydraulis which had become known to them through translations from the Greek (Mūrisṭus probably), the Byzantines re-adopted the instrument which they had discarded centuries before and of whose construction they had probably lost all knowledge.

The story that Hārūn presented an organ to Charlemagne (see *Hist. littéraire de la France*, xii, 467; Larousse, *Le grand dictionnaire*; idem, *La grande encyclopédie*; Hopkins and Rimbault, *The organ*; Grove, *Dictionary of music*; Audsley, *Art of organ building*; *al-Machriq*, ix, 20) is a fable which can be traced to a note in *Les Chevaliers du Cygne* of Madame De Genlis. Even the event chronicled in mediaeval works (*Monumenta Germaniae historica*, i, 194) that Hārūn presented a clepsydra to Charlemagne is suspect in some quarters (*Isl.*, iii, 409, iv, 333). Cl. Huart (*Histoire des arabes*, ii, 107) and Heyd (*Hist. du commerce du Levant*, i, 90) are certainly in error in saying that "instruments of music" were among these gifts of Hārūn to Charlemagne.

On the other hand, it would seem quite likely that it was due to the Mongols that the organ (? hydraulis) was introduced into China. In the Chinese *Yüan shih* we are told that an organ was "presented by the Muslim kingdoms in Chungtʿung" (1260-4), whilst another work informs us that it was "an offering from the lands of the West" and that Ḳubilay himself improved it (*JRAS, China Branch* [1908]; *JRAS* [1926]). We may suppose that the original instrument came as a gift from Hülegü to Ḳubilay, and that it was made in Syria, where instruments of this type were being constructed at this time (Ibn Abī Uṣaybiʿa, ii, 155, 163). Some lexicographers of Persian (Richardson, Steingass) define the *ṭūlumba* as "an hydraulic musical instrument", but it was more likely the name of "an hydraulic machine", or more probably "a pump".

(H.G. Farmer*)

URĪSĀ, Odra-deśa, conventionally Orissa, the land of the Oriyas, is a province of the Indian Union (between lat. 17° 49' N., and 22° 34' N., and between long. 81° 29' E. and 87° 29' E.). Spread over an area of 155,707 km²/60,178 sq. miles, it has a population of 31,659,736, of which 5,777,775 are Muslims. Its capital is Bhubaneswar to the south of Cuttack.

Orissa covers the delta region of the Mahānadī and other rivers and is bounded by the Bay of Bengal on the east, West Bengal on the north-east, Madhya Pradesh on the west and Andhra Pradesh on the south. The state is drained by three great rivers—the Mahānadī, the Brahmanī and the Baitaranī and some lesser rivers. The Čilka Lake is the biggest and most famous of its lakes. The valleys are rich in minerals. All writers, from Mug͟hal authors like Abu 'l-Faḍl and Sud̲j̲ān Ray to European travellers like Ralph Fitch and Alexander Hamilton, refer to the textile products of Orissa. However, industrially the area is at present not very advanced, though agro-based industries are now growing in importance, with Cuttack as the province's main industrial centre. The state is divided into 27 districts. There are five universities: Berhampur; D̲j̲agannat Sanskrit; Orissa University of Agriculture and Technology; Sambalpur; and Utkal.

Geographical conditions, such as an accessible coastal plain but a less accessible highland interior, led to the rise of small independent feudatory states in the region. In ancient times Orissa formed part of the Kalinga state. The Kalinga campaign of Aśoka in the 3rd century B.C. played an important part in shaping his thought and personality, while in the 2nd century B.C., Orissa became a powerful land under Kharavela. In the 9th century A.D. Narasingha Dēv of the Ganga dynasty built the Sun Temple at Konark; Orissa was, in fact, famed for the large number of temples there. A style of architecture, called Kalinga style, and a particular style of dance, called Odissi, developed there.

The Muslim occupation of Orissa had a chequered history. In 1205 Bak͟htiyār K͟hald̲j̲ī sent Muḥammad S͟hīrān K͟hald̲j̲ī towards Lakhnor and D̲j̲ad̲j̲nagar (D̲j̲uzd̲j̲ānī, *Ṭabaḳāt-i Nāṣirī*, tr. Raverty, i, 573). G͟hiyāt͟h al-Dīn K͟hald̲j̲ī collected tribute from D̲j̲ād̲j̲nagar, occupied the Lakhnor tract and pushed the southern frontier of his kingdom up to Damodar. Some inscriptions which refer to these invasions do not name the invaders (e.g. an inscription in the Čhateswāra temple in Cuttack, see *JASB*, lxvii). Narasimbha I (1238-64) sought to wrest Radha from the Muslims. D̲j̲ūzd̲j̲ānī refers to the skirmishes of the Rāy of D̲j̲ād̲j̲nagar and his harrying the Lakhanawatī region (tr. Raverty, ii, 738).

In Ramaḍān 640/March 1243, the troops of Orissa appeared before the gates of Lakhanawatī or Gawr. Malik Tog͟hril-i Tug͟hān K͟hān appealed to the Sultan of Dihlī, ʿAlāʾ al-Dīn Masʿūd S͟hāh, who ordered the governors of Kara, Manikpur and Awadh to proceed to Lakhanawatī and deal with D̲j̲ād̲j̲nagar (tr. Raverty, ii, 762-3). Malik Temūr K͟hān, the governor of Awadh, seized the throne of Lakhanawatī, but the Ganga

ruler of Lakhnor could not be dislodged. In 651/1253 Mughīth al-Dīn Yazbek, governor of Bengal and Bihār, marched on Lakhnor. He captured Mandaran; Paramardin fell in the conflict and the district of Radha came under Muslim control. For a very long time the Sharkīs of Djawnpūr, the Bahmanīs of the Deccan, the local Hindu chieftains and the governors of the Dihlī Sultans all struggled for supremacy in the region. Sultan Mahmūd Sharkī of Djawnpūr (d. 862/1458) invaded Djādjnagar and destroyed some temples there (Niẓām al-Dīn Aḥmad, *Ṭabaḳāt-i Akbarī*, iii, 458). Ḥusayn Shāh Bahmanī invaded Djādjnagar with a huge army. The Rāy negotiated peace and sent tribute. Within five years (859-64/1455-60), two Sharkī sultans successfully invaded coastal Orissa. More than a dozen coins of Muḥammad Sharkī have been found at Dēōgaṙh in the Sambalpur district.

The Bahmanīs clashed with the ruler Gadjapati. Sandjar Khān, a noble of the Bahmanī Sultan ʿAlāʾ al-Dīn Aḥmad, engaged in conflict with the Oriya chief of Telingāna [*q.v.*]. The sultan had warned him that he would be no match against "the possessor of elephants" (ʿAlī b. ʿAzīz Allāh Ṭabāṭabā, *Burhān-i maʾāthir*, in *The Indian Antiquary*, xxviii, 237). He was defeated by Ganadēva Rantaraya, but hostilities now began between the local rulers of Orissa and the Bahmanīs of the Deccan.

Kapilendra (d. *ca.* 1467) assumed the title of "Overlord of Karnatka and Kalbarga (Gulbarga)", and mobilised forces against the invaders. He invaded the Bahmanī kingdom along with the *zamīndārs* of Telingāna, but was repulsed. Firishta says (*Tārīkh*, i, 343-4) that the *rāys* of Orissa and Telingāna attacked "the country of Islam", taking advantage of the invasion of Maḥmūd Shāh Khaldjī of Mālwa. According to Niẓām al-Dīn (iii, 87) the Rāy of Orissa failed in his attempt to take Bīdar, and returned to his capital after an abortive campaign.

Kapilendra concentrated more on the Bahmanīs of Bīdar and the *rāys* of Vidjayanagara [*q.v.*], but the real danger to him came from the Muslim rulers of Bengal. He set himself the task of conquering territories in South India and advanced as far as the banks of the Kaveri, but his policy was unsuccessful in the long run.

Kapilendra's eldest son Hamir, who was unable to succeed his father, sought the help of the Bahmanī ruler, Shams al-Dīn Muḥammad III. Muḥammad sent his commander Niẓām al-Mulk to assist Hamir, who was installed in his hereditary territory. Hamir than helped Niẓām al-Mulk to conquer Kondnir and Radjamahandrī.

Thus Orissa passed through many political upheavals for some two centuries until in 1592 Akbar sent an army under Rādja Mān Singh and annexed the region to the Mughal Empire. Akbar's contribution to Orissa's future was twofold. First, he introduced his finance minister Tōdar Mal's [*q.v.*] revenue system in a land of agrarian crisis. Second, he successfully solved the problems relating to the administration of the Djagannath Temple and created a favourable atmosphere for himself. But difficulties re-appeared during the time of his son Djahāngīr, who had to carry out raids against the Superintendent of the Temple. Djahāngīr separated Orissa from Bengal and placed it under a separate governor. Later, Awrangzīb had to deal with a number of problems arising out of the religious situation, particularly the position of temples. Early in his reign, Awrangzīb issued what Sir Jadunath Sarkar called "pro-Islamic ordinances" (*Studies in Mughal India*, 224), but their purpose was to abolish duties on certain commodities "for the good of the subjects". *Ḳāḍīs* and *muḥtasibs* were appointed to promulgate religious law. Orissa was notorious for the castration of children and their sale as eunuchs by their mercenary parents (*Āʾīn-i Akbarī*, tr. Jarrett, ii, 126); Awrangzīb now adopted strict measures to stop the practice.

The Mughals gave rent-free grants to Muslim religious figures in Goalpur, Katak and Karmul. Some idol temples which were constructed during the last ten or twelve years of Awrangzīb's reign, when the temple crisis was in full swing, were destroyed on the orders of Awrangzīb.

The Mughal administration was responsible for many changes in the socio-economic conditions of Orissa. "The military character of the feudal society under the Hindu kings of Orissa underwent changes during the Mughal occupation. The military feudalship was gradually replaced by a scientific revenue administrative system" (Raut, *Socio-economic life in medieval Orissa*, Calcutta 1988, 223). The revenue records, which were generally on palm leaves and in Oriya language, were henceforth maintained in Persian. Large number of Persian and Arabic terms thus entered the Oriya vocabulary and their impact is found "in *Kavya, purana*, music and novel" (B.C. Ray, *Orissa under the Mughals*, Calcutta 1981, 180). The Satyapīr cult [*q.v.*] also found currency in Orissa. The Mughals used the sea-ports, established ship-building centres and gave a fillip to economic activity in the region.

When Mughal power declined, the Marāthās [*q.v.*] established their hold over Orissa in 1751. In 1803 the British took over the area and turned their attention in particular to what would now be called the "agri-horticultural base of the region". Balaspore was developed as a ship-building centre. In 1858 Sir Arthur Cotton recommended construction of a complete system of irrigation and navigation canals. Water was first supplied for irrigation in 1865. Orissa was separated from Bengal in 1905, and in 1912 was combined with Bihār [*q.v.*]. In 1936 it was made a separate province. After the declaration of Independence, the 24 princely states in and around Orissa were merged with the State of Orissa.

There are few Muslim monuments of any significance in Orissa other than some mosques of significance at Cuttack, Djādpūr and Balasore. The Friday Mosque at Balū Bāzār is considered "the magnum opus of Muslim monuments in Orissa" (Ray, *op. cit.*, 187).

Bibliography (in addition to references given in the article): *Madala pandji*, an ancient record on palm leaves preserved in the Djagannath Temple at Puri, is of antiquarian interest but of little historical value.

URM, a district in Ādharbāydjān whose precise location is unknown.

According to al-Balādhurī, *Futūḥ*, 328, Saʿīd b. al-ʿĀṣ [*q.v.*], sent to conquer Ādharbāydjān, attacked the people of Mūḳān and Gīlān. A number of inhabitants of Ādharbāydjān and Armenians, who had gathered in the *nāḥiya* of Urm and at بلوانكرج *Balwānkaradj, were defeated by one of Saʿīd's commanders. The leader of the rebels was hanged on the walls of the fortress of Bādjarwān (see on this place, Ḥamd Allāh Mustawfī, *Nuzhat al-Ḳulūb*, 181, tr. 173; Bādjarwān was 20 *farsakhs* north of Ardabīl).

Ibn Khurradādhbih, 119, mentions the citadel of Urm between al-Badhdh [*q.v.* in Suppl.] (a town of Bābak's on a river which flows into the Araxes above the river of Ardabīl) and Balwānkaradj. Ibn al-Faḳīh, 216, speaks of several districts (*rasātīḳ*) of Urm. Yāḳūt, i, 216, mentions the region (*suḳʿ*) of Urm but gives only an abridgment of al-Balādhurī.

The names mentioned by al-Balādhurī and by Ibn Khurradādhbih suggest a district in the north-east of Ādharbāydjān, perhaps in the Ḳaradja-dagh of the present day (the capital of which is Ahar and in the northern districts of which we find Armenians).

Bibliography: Schwarz, *Iran im Mittelalter*, 1135-6. (V. Minorsky)

URMIYA, the name of a lake and of a town and district in western Ādharbāydjān.

1. The lake

Lake Urmiya, also called Daryā-yi Shāhī or, in the Pahlawī period, Daryā-yi Riḍā'iyya or Lake Reza'iyeh, is the largest lake in the Middle East. It is about 140 km/87 miles long and from 40 km/25 miles to 56 km/35 miles wide and lies at an altitude of 1,275 km/4,183 feet. Its maximum depth is 16 m/53 feet, and the southern part of the lake contains numerous small islands, but most important is the mountainous Shāhī peninsula on its eastern shore. The lake is landlocked, with no outlet, and it forms the centre of an extensive drainage system of northwestern Persia. It is remarkable for the great salinity of its waters, and because of this, organic life in its waters is limited. Since 1967 it has enjoyed the status of a protected wetland region. Navigation on it is limited to small motor craft plying between places along its shores.

The most important rivers flowing into the lake are: in the east, the Adjī-čay "bitter river", which waters Sarāb and Tabrīz; the Sofi-čay and Mürdi-čay which flow from the southwestern face of Mount Sahand [see MARĀGHA]; in the south, Djaghatū, Tatawū and Sāwdj-Bulāḳ [*q.v.*]; to the south-west, the Gādir [see SULDUZ and USHNŪ]; in the west, the rivers of Urmiya and Salmās [*q.v.*]. In the north, the mountain of Meshow overshadows the narrow strip of the northern shore [see TABRĪZ].

In the Assyrian records, the "upper eastern lake" seems to correspond to the Lake of Urmiya. Streck, in *ZA*, xv, 263, thought he could identify the latter as the "sea" mentioned by the Assyrians near the Mazamūa country; but this "sea" may be Lake Zaribār. In the account of the eighth campaign of Sargon (714 B.C.), the name of the lake is not mentioned.

Strabo, xi, ch. xiii, calls the lake Σπαῦτα (emended by St. Martin to Καπαῦτα = Kapōt "blue") and xi, ch. xiv, Μαντιανή. Ptolemy, vi, ch. ii, calls it Μαργιανή (*Μαντιανή?; see MARĀGHA). As a rule, the name Mantiane is connected with that of the Matienoi people in whose country Herodotus (i. 189, 202; v. 52) makes the Araxes (?) rise and situates the Gyndes (Diyālā). Marquart (*Süd-armenien und die Tigrisquellen*, Vienna 1930, 431) thought he could identify these Matienoi (or Mantianoi) with the Mannaeans (Mana, Mannai).

The Avesta knows the lake by the name of Čaēčasta "deep lake with salt waters". Bartholomae, *Altir. Wört.*, col. 575, interprets the name as "shining white" (*weissschimmernd*). On its banks Kawi Haosrawah slew the Turanian Frańrasyān (Yasht, ix, 18 etc.). According to the *Bundahishn*, xvii. 7, tr. West, the same Kay Khusraw destroyed the temple of idols near the Lake Čēčast (cf. the *Shāh-nāma*, ed. Vullers, ii, 441, where Khandjast should be emended to Čēčast). From the name Čaēčasta must come the Arabic name of the sanctuary Shīz (= Gaznā, Ganza) to the south of the lake, identified by Rawlinson with Takht-i Sulaymān.

Another old name which was applied to the lake is Kapōtān "blue". The Armenian geography of the 7th century gives Kaputan, cf. Marquart, *Ērānšahr*, 137, and Ibn Ḥawḳal, 237: Kabūdhān.

Al-Iṣṭakhrī, 181, calls the lake Buḥayrat al-Shurāt "the Lake of the Khāridjīs", presumably from an earlier presence of these sectarians in the region, but more often it bears the name of adjoining towns: Urmiya, Shāhī and Tasūdj.

The name Shāhī (Shāhā) although only found late, is connected with the old fortress which stood on the peninsula to the northeast of the lake. The fortress of Shāhī was known to al-Ṭabarī, iii, 1171, 1379 (under 200/815). It is mentioned in the time of the Khwārazmshāh Djalāl al-Dīn (al-Nasawī, 157). It was at Shāhī that the first Mongol Īlkhāns Hülegü and Abaḳa were buried (cf. Rashīd al-Dīn, ed. Quatremère, 416; Ḥāfiẓ Abrū, quoted in Le Strange, *Lands*, 161; d'Ohsson, *Hist. des Mongols*, iv, 340). Abu 'l-Fidā' calls the lake Buḥayrat Talā. The Persian translation of al-Iṣṭakhrī (cf. de Goeje in Ibn Ḥawḳal, 247 n. *m*) seems to distinguish between the two names, and the fortress of Talā mentioned by al-Nasawī, 153-4 (cf. Yāḳūt, iii, 541, who takes Talā to be a Persian word) would seem rather to be connected with the west bank. In this case, it should be sought at Güwerčin-Ḳalʿa on a cliff which rises above the lake on the Salmās shore, cf. Ker Porter, *Travels*, ii, 593.

The Arab geographers know that the salt waters of the lake will not support organic life. According to al-Ṭabarī, iii, 1380, the lake does not contain fish or anything of value. Al-Iṣṭakhrī (189) and al-Gharnaṭī (in al-Ḳazwīnī, 194) alone affirm the contrary. The first talks of the "fish-animal" called "water-dog"; al-Gharnaṭī delights in wonderful stories, which are later repeated by Ewliyā Čelebi.

Bibliography: For older bibl., see the *EI*[1] art. s.v., out of which one may cite Rashīd al-Dīn, ed. Quatremère, *Hist. des Mongols de la Perse*, 316-20. Of more recent works, see Naval Intelligence Division. Admiralty Handbooks, *Persia*, London 1945, index; *Camb. hist. Iran*, i, index, s.v. Rezā'īyeh, lake.

2. The town and district

The name. Neo-Syriac speakers write Urmiyā, the Armenians Ormi, the Arabs Urmiya, the Persians Urūmī, the Turks Urūmiyye or Rūmiyye (through a fanciful derivation from Rūm "Byzantium, Turkey"). The name is of uncertain, non-Iranian origin. Assyrian sources mention a place called Urmeiate in the land of Mann in the vicinity of Lake Urmiya. On the other hand, the name is unknown to the classical geographers and to the *Avesta* and Pahlavi sources. It is also unknown to the Armenian geography of the 7th century in spite of the fact that late Zoroastrian tradition early recorded by the Arabs (see al-Balādhurī, 331; Ibn Khurradādhbih, 119) placed the birthplace of Zoroaster at Urmiya.

Geography. The district of Urmiya is bounded on the east by Lake Urmiya and in the west by the mountain range which runs north and south and separates Persia from Turkey. The district of Urmiya consists of plain and mountains. The rivers that water it and which flow from west to east are:

1. The Baranduz, which unites the waters of the district of Märgävär and then runs through the gorge of Nergi into the plain which it runs round on the south side.
2. The Barde-Sūr (= Kurdish "Red Stone") runs out of the gorge of Bēdkār (belonging to Turkey), through the mountainous region of Däsht, which belongs to Urmiya and then through the pass of Bänd into the plain and through the town of Urmiya, whence its other name, Shähär-čay "the river of the town".
3. The Rouzä (Rawḍa)-čay drains the hilly district of Tärgävär and before reaching the lake has been used up by irrigation canals.
4. The Nāzlu-čay is made up of a number of streams, of which the southern one rises in the Turkish district of Deyri (where the monastery of Mar Bisho is) and, below the village of Arzin, runs through the northern part of Tärgävär; the middle one comes out of the gorge of Bažirga and near the village of Sērō enters the Persian district of Brādost; the northern stream is that of the district of the Sōmāy [*q.v.*] which belongs to Salmās.

The abundant water-supply renders the alluvial plain of Urmiya extremely fertile. The villages are buried in verdure. In the mountain districts, agriculture is dependent on the rains. The natural conditions there are very favourable for the breeding of sheep.

Archaeology. Several tells in the vicinity of the town (Gök-täpä, Degala, Tarmani, Aḥmad, Saralan, Dīzä-täpä) have already produced objects of great antiquity. Urmiya came within the ancient Urartu (late second millennium B.C.-early first millennium B.C.), which had linguistic connections with the Hurrians of Anatolia but which came under strong Assyrian cultural influence. Just to the south of Lake Urmiya was the city and principality of Manna, which was backed against Urartu in the 8th century by the rising power of Assyria, whose King Sargon defeated the Urartians in 714 B.C., although kings of Urartu continued into the 7th century B.C.

The Islamic period. Urmiya was conquered by Ṣadaḳa b. ʿAlī, a client of the Azd, who built several castles there (al-Balādhurī, 331-2); according to another story, the town was taken by ʿUtba b. Farḳad, whom the caliph ʿUmar had sent in 20/640 to conquer the district of Mawṣil.

The geographers of the 4th/10th century (al-Iṣṭakhrī, 181; Ibn Ḥawḳal, 239) give Urmiya the third place among the towns of Ādharbāydjān (next to Ardabīl and Marāgha) and emphasise its wealth in water, pasture and fruits. Al-Muḳaddasī, 51, puts Urmiya in Armenia and says it is governed from Dwin. At this period, Urmiya was on the great road Ardabīl-Marāgha-Urmiya-Barkrī (to the northeast of Lake Van)-Āmid. As Tabrīz was not yet of any importance, the road made a detour to the south to serve the principal towns. It is possible that the presence of unsubdued elements in the north of Ādharbāydjān (cf. the name of the lake Buḥayrat al-Shurāt and the history of the Khurramī rebel Bābak) also influenced this deviation of the road towards the south.

The district of Urmiya, being inhabited by Kurds and Christians, has never played a great part in Islamic history. It was a remote fief in which the offshoots of the dynasties that reigned in Ādharbāydjān lived in isolation.

In the period of Daylamī domination in Ādharbāydjān, we find in Urmiya a certain Djustān b. Sharmazan. This general had begun in 342/953 as a devoted partisan of the Kurd Daysam. Later, won over by the Daylamīs, he became governor of Armenia under Marzubān. When Djustān succeeded his father Marzubān in 346/957-8, Djustān b. Sharmazan did not recognise his suzerainty. At first he left Urmiya to throw in his lot with Ibrāhīm b. Marzubān, for whom he conquered Marāgha. He later left him to return to Urmiya, which he surrounded with walls; he also built a strong fortress there. He then entered the service of the claimant to the caliphate al-Mustadjīr bi 'llāh and had the support of the Ḳaḥṭānī Kurds. But the sons of Marzubān (Djustān and Ibrāhīm) defeated him with the help of the Hadhbānī Kurds. In 349/960-1 at the instigation of Wahsūdān, brother of Marzubān, he inflicted a defeat on Ibrāhīm b. Marzubān, captured the remnants of his army and annexed Marāgha to Urmiya. In 355/966 through the mediation of the Būyid Rukn al-Dawla, he again recognised the authority of Ibrāhīm (Miskawayh, *Tadjārib*, ed. Amedroz, ii, 150, 167, 177-8, 180, 219, 229; Ibn al-Athīr, viii, 395).

When the Ghuzz invaded Ādharbāydjān in 420-32/1029-41, the lord of Urmiya was a certain Abu 'l-Haydjā b. Rabīb al-Dawla, chief of the Hadhbānī Kurds, whose mother was the sister of the prince of Tabrīz, Wahsūdān al-Rawwādī. This son of Rabīb al-Dawla boasted of having destroyed near a bridge 25,000 Ghuzz of the 30,000 who were trying to cross his territory (in 432 ?); cf. Ibn al-Athīr, ix, 271.

In Muḥarram 455/January 1063, Sultan Ṭoghrïl passed through Urmiya (al-Bundārī, 25). When Masʿūd returned from Baghdād to Ādharbāydjān (in 526?), the *amīr* Ḥādjib Tatar had fortified himself in Urmiya but later he submitted to the sultan (*ibid.*, 165). In 544/1149 Urmiya belonged to Malik Muḥammad b. Maḥmūd b. Muḥammad, nephew and son-in-law of Masʿūd b. Muḥammad b. Malik-shāh (Rāwandī, *Rāḥat al-ṣudūr*, ed. Iqbāl, 244). When the last Saldjūḳ Ṭoghrïl quarrelled with his uncle, the Ildegizid Ḳïzïl Arslān, Ṭoghrïl had the support of the *amīr* Ḥasan b. Ḳifdjaḳ and with him laid siege to Urmiya in 585/1189. The town was taken by storm, sacked and destroyed (al-Bundārī, 302).

In 602/1205-6, the Atābeg of Tabrīz Abū Bakr gave Ushnū (*sic* for Ustuwā) and Urmiya to the Atābeg of Marāgha ʿAlāʾ al-Dīn to recompense him for the loss of Marāgha (Ibn al-Athīr, vii, 157). Yāḳūt, who visited Urmiya in 617/1220, speaks of its lack of security on account of the weakness of its ruler, the Ildegizid Özbek b. Pahlawān.

During the rule in Ādharbāydjān of the Khwārazm-shāh Djalāl al-Dīn, Urmiya, Salmās and Khoy formed

the personal appanage of the Saldjūḳ princess whom Djalāl al-Dīn had carried off from her first husband, the Ildegizid Özbek. In 623/1226 the Īwā'ī Turkomans seized Urmiya and levied *kharādj*. On the complaint of the princess, his wife, Djalāl al-Dīn sent troops, who defeated the Turkomans (Ibn al-Athīr, xii, 301).

On the other hand, according to Djuwaynī, ii, 160, 184, the Georgian generals Shalwa and Iwane, taken prisoners in the battle of Karbi (622/1225) and at first treated with honour by Djalāl al-Dīn, were given for a short time Marand, Salmās, Urmiya and Ushnū. In 628/1230-1 the Khwārazmshāh, when hard pressed by the Mongols, spent the winter in the region of Urmiya-Ushnū. His stay there may explain the story of the building by the Khwārazmshāh of the Se-Gunbadān and even of his burial at Urmiya.

Tīmūr. According to the local chronicle, Tīmūr had given Urmiya as a fief to Gurgīn-beg of the Afshar tribe, who established himself in the fortress of Torpakh (=Toprak)-Ḳalʿa, a quarter of a *farsakh* from the town of Urmiya. The *Ẓafar-nāma*, however (i, 424), mentions as governor a certain Tīzak (?) whose rights were confirmed by Tīmūr in 789/1307.

The Brādōst. According to the *Tārīkh-i ʿĀlam-ārā*, 559, in the time of Shāh Ṭahmāsp the great *amīrs* were governors at Urmiya, while the Kurd Ḳara Tādj of the Brādōst tribe, who had been made *shāhiseven*, was given the districts of Tärgävär and Märgävär. In 1012/1603 Shāh ʿAbbās, in order to reward the loyalty of Amīr-Khān Brādōst, who had not submitted to the Ottomans, gave him Urmiya and Ushnū, although he later fell under suspicion.

Conversions to the Shīʿa under the Ṣafawids seemed to have been of an isolated character among the natives of the region of Urmiya, where to this day the Kurds and a few villages (Balow) are still Sunnī. The influence of the Sunnī Naḳshbandī *shaykhs* may be judged from the fact that in 1049/1639 the Ottoman Sultan Murād executed in Diyārbakr the *shaykh* Maḥmūd of Urmiya, who had 30-40,000 partisans.

Ewliyā Čelebi. For the year 1065/1655 we have the very detailed account of Ewliyā Čelebi (iv, 271-318). Unfortunately his itinerary and story are very confused. He describes the fortress, the walls of which were covered with plaster, looking "like a white swan". Its circumference was 10,000 paces, the walls were 70 *dhirāʿ* high and 30 *dhirāʿ* wide; the ditch was 80 *dhirāʿ* wide and 15,000 paces round. During the night, the walls were lit by torches. The garrison consisted of 4,000 men and 310 (?) guns. The Khān had at his disposal 15,000 soldiers and 20,000 *nükers* or retainers. The town had 60 quarters, 6,000 houses and 8 cathedral mosques, among which was that of the Aḳ Ḳoyunlu Uzun Ḥasan, which was finished under his son Yaʿḳūb. In the plain of Urmiya (*ölgä*) there were 150 villages, with 300,000 peasants. Ewliyā Čelebi says the town was exceedingly prosperous and gives a list of its sanctuaries, its *medreses*, schools, cafés and fixed prices (*narkh-i Shaykh Ṣafī*).

The Afshārs. In the 18th century, the fate of Urmiya was closely bound up with the fortunes of the Afshārs settled in the plain, whose chief bore the title *beglärbegi*.

These chiefs were continually fighting with their neighbours and in troubled times, so frequent in the 18th century, they even led expeditions to the east of the Lake of Urmiya.

During the campaign of 1724, the Ottomans employed the Hakkārī Kurds to ward off the Afshārs, who were threatening the provisionment of the army. When in 1725, the Turks organised the administration of the country, the Khānate of Urmiya was recognised as hereditary in the family of Ḳāsimlu (Afshār ?). In 1729 Nādir recaptured from the Turks Marāgha, Sāwdj-bulaḳ and Dimdim, but in 1731 the Ḥekīm-oghlu Pashas ʿAlī and Rustam seized Urmiya after a desperate resistance which lasted a month. Urmiya was entrusted to the Hakkārī chief Binānishin. It was only by the treaty of 1736 that the Turks were ejected from Ādharbāydjān.

Āzād Khān. After the disappearance of the Nādirid Ibrāhīm Shāh (in 1161/1748), one of his generals, Āzād Khān, a descendant of an Afghan chief, retired first of all to Shahrazūr and then, taking advantage of the troubles among the Afshār, seized Urmiya, where he was favourably received by Fatḥ ʿAlī Khān. Urmiya became the capital of the ephemeral principality of Āzād. The mountain name Awghan-daghî to the north of Urmiya seems to preserve the memory of Afghan rule.

The Ḳādjārs. In 1169/1755-6, Muḥammad Ḥasan Khān Ḳādjār, having defeated Āzād in Gīlān, seized Urmiya. Fatḥ ʿAlī Khān Afshār joined Muḥammad Ḥasan. On the latter's death, Fatḥ ʿAlī Khān reappeared on the scene and from Urmiya captured Marāgha and Tabrīz. In the winter of 1173/1759 he was besieged in the latter town by Karīm Khān Zand and in the following year, Ādharbāydjān passed into the power of Karīm Khān. Urmiya was taken after a siege of seven months. After the end of the Zand dynasty, the Afshār of Urmiya with the Shaḳaḳ [*q.v.*] of Sarāb and the Dumbulī of Khoy formed a coalition against the Ḳādjārs, but had no success. Fatḥ ʿAlī Shāh had Muḥammad Ḳuli Khān put to death but married the sister of Ḥusayn Ḳuli Khān Afshār, whose sons were the first governors of Urmiya to be appointed by the central government in Tehran. In 1828, in the course of the Russo-Persian War, Urmiya was occupied for several months by Russian troops. In the absence of the governor (the prince Malik Ḳāsim Mīrzā), the town was ruled by the *beglerbegi* Nadjaf-Ḳuli Khān Afshār.

ʿUbaydallāh. In 1880 Shaykh ʿUbaydallāh of Shamdīnān [*q.v.*] invaded Ādharbāydjān. Urmiya was besieged by the Kurds, and was about to surrender, when the arrival of the Khān of Mākū [*q.v.*] saved it.

Turkish occupation. In August 1906, after the reverses suffered by Russia in the Far East, Turkey occupied the district of Urmiya except the enclave of the town under the pretext that the Turco-Persian frontier had never been settled. The Turkish troops were recalled at the beginning of the Balkan War. After the incidents at Tabrīz in December 1911, Urmiya was occupied by Russian troops, and during the First World War, Urmiya changed hands several times. As a result of the break-up of the Russian army in 1917, the actual authority in the town passed into the hands of the council of "Assyrian" Christians (*mutwa*). After a series of tragic and bloody events (massacre of the Muslims of Urmiya by the Christians on 22 February 1918, the assassination of the patriarch Mār Shimūn by followers of the Kurd chief Simko on 25 February, the arrival of 20,000 Armenian refugees from Van, and fights between Assyrians and Turks), all the Assyrian population collected in the plain of Urmiya, and to the number of 50-70,000 set out for the south to put themselves under British protection. This exodus with women, children and cattle took place via Sa'in-Ḳalʿa and Hamadān in the midst of fighting with Turkish troops and the Kurds. The refugees were settled at Baʿḳūba to the north of Baghdād. After the departure of the "Assyrians", the Catholic Bishop Mgr.

Sontag and the Baptist missionary H. Pflaumer were killed at Urmiya on 1 August 1918.

The peace found Urmiya in ruins and depopulated. Only gradually was the central government in Tehran able to reassert its authority in the west of the Lake of Urmiya.

Under the Pahlawīs, the town of Urmiya (lat. 37° 32' N., long. 45° 02' E.) gradually recovered. Anglo-Russian political rivalry had prevented the construction of any railways in northwestern Persia, but during the First World War, under a concession to the Russian Discount and Loan Bank, the Julfa-Tabrīz line was constructed, with a 30-mile branch to Urmiya, which actually reached the town in 1916. In the Pahlawī period, the town was re-named Riḍā'iyya (Reza'iyeh). After the Islamic Revolution of 1979, the old name was restored. It is now the chef-lieu of a *shahrastān* in the province of West Azerbaijan, and has a population of 435,200 (1996 census).

3. Christians in the region.

Local legend attributes the foundation of Mart Maryam church in Urmiya to the Magi returning from worshipping the infant Jesus in Bethlehem. However, the town is not mentioned in any pre-Islamic Christian source. It is first attested as a diocese of the Assyrian Church of the East [see nasṭūriyyūn] in 1111 and of the Syrian Orthodox church in 1189. A continuous church history can be traced from the 16th century onwards. By this time, there had probably been a migration of Assyrian Christians from the mountains of Kurdistān to the Urmiya plain. In 1562 the Catholic Chaldaean patriarch ʿAbdīshōʿ claimed to preside over the four metropolitan sees of Urmi superior, Urmi inferior, Superghan (a village 25 km/15 miles north of the city) and Salmās (the plain further to the north [*q.v.*]). Some of his successors lived in Urmiya or Salmās until the end of the 17th century, more or less estranged from the Roman obedience.

Urmiya became the centre of western missionary activity among the Syrian Christians in the 19th century. The American Board of Commissioners for Foreign Missions set up a station in 1834; the French Lazarists followed in 1838; the Archbishop of Canterbury's Assyrian Mission in 1884; and the Russian Orthodox Church in 1898. Thanks to publications by missionaries and consuls, the life and demography of Christians in the area are well documented (see e.g. the works by Perkins, Hornus, and Maclean and Browne listed below). The missions benefited the Syrians by their schools and publications in the modern Syriac language, but the lack of opportunity for their graduates within Persia caused many to emigrate. Almost all the Christians in the region joined the Orthodox Church after 1898 to secure Russian civil protection, but this mass conversion did not survive the 1914-18 war, and the Russian Orthodox mission was dissolved by the terms of the Perso-Soviet Russian treaty of 1921. During the course of the war, the Syrians (or Assyrians, as they were starting to be called) concentrated in Urmiya and the city became the headquarters for the Assyrian forces fighting on the side of the Allies. They were at last unable to hold out in isolation, and there was a flight of all Christians from the city in August 1918.

The Christian population returned to the area only in small numbers after 1920. According to Berthaud's figures, the number of Christians had recovered to 10,242 in 1947 (from 18,260 in 1910). However, since then the movement to the cities has depopulated many villages. The Chaldaean archdiocese of Urmiya-Salmās numbered 2,000 in 1996. The Assyrian Church of the East in the city has only the parish of Mart Maryam, and there are two Protestant congregations. There is also an Armenian population of 2,000 in the region, with a parish church in Urmiya.

ʿURS, ʿUrus (a., pl. *aʿrās* and *ʿurusāt*), originally the leading of the bride to her bridegroom, marriage, also the wedding feast simply; whence a denominal verb form IV *aʿrasa* "to celebrate a marriage". *ʿArūs* means both bridegroom and bride; in modern linguistic usage this term has, however, been supplanted by *ʿarīs* "bridegroom" and *ʿarūsa* "bride" (as early as the *1001 Nights*, cf. Dozy, *Suppl.*, ii, 110). Two kinds of weddings have to be distinguished: *ʿurs* is the wedding performed in the tribe or the house of the man, and *ʿumra* is the wedding performed in the house or tribe of the woman (this distinction is already made by Ibn al-Aʿrābī [d. 231/845] in *LʿA*[1], vi, 283; cf. al-Fīrūzābādī, *Ḳāmūs*, s.v. *ʿ-m-r* and *ʿ-r-s*). The two forms

agree for the most part in practice; they only differ in the choice of place for the main ceremonies and in the fact that in the *'umra*, the *zaffa* "procession" of the bride is omitted.

1. Pre- and early Islam

a. Little is known of the wedding customs of the pre-Islamic Arabs. They seem to have been very simple in the Arabian Peninsula itself, as is still the case among the Bedouin (cf. below). The pomp and display of later centuries, especially in the bridal procession, was probably unknown. The wedding lasted a week, whence it is also called *usbū'* (cf. *Aghānī*[1], xii, 145). The bride is adorned, perfumed and painted with *kuḥl*. There is an old proverb which says: "The scent behind a bride cannot be concealed" (Nöldeke, *Delectus*, 48 l. 9; al-Maydānī, *Amthāl*, ed. Freytag, xxiii, 269). The bride is called "the conducted one" (cf. 'Antara, xxvii, 1), i.e. she was conducted to the bridegroom, usually by a number of women without any pomp, but very quietly and simply. This at least is indicated by the story of 'Ukayil b. 'Ullafa, who betrothed his daughter to the Umayyad caliph Yazīd I; he made it a condition that the caliph's people should not come for his daughter but that he should bring her himself on a camel (*Aghānī*[1], xi, 90). Sometimes she was brought in a litter (*mizaffa*) (cf. al-Djawharī, *Ṣaḥāḥ*, s.v. *z-f-f*), as was still the case in 19th century Mecca (Snouck Hurgronje, *Mekka*, ii, 182). A special tent was always put up for the young couple. About the bridegroom there is an old proverb: "The bridegroom wants little to be an *amīr* (or king)" (al-Djawharī, s.v. *'-r-s*; al-Maydānī, xii, 143).

In the lands adjoining Arabia, on the other hand, weddings were celebrated with great splendour. Thus we are told (*Aghānī*[1], xx, 23) of a Persian wedding in 'Irāḳ with a splendid bridal procession; similarly for Syria as early as I. Macc. ix. 37: .... *ποιοῦσιν γάμον μέγαν καὶ ἄγουσιν τὴν νύμφην....μετὰ παραπομπῆς μεγάλης*. As late as the beginning of the 3rd/9th century, we find a simple Bedouin much surprised at a splendid wedding in North Syria (*Aghānī*[1], xii, 35-6), which shows that Syrian usages were foreign to the Arabs (see on the above section: Freytag, *Einleitung in das Studium der arab. Sprache*, Bonn 1861, 203-4; Wellhausen, *Die Ehe bei den Arabern*, in *N.G.W. Gött.* [1893], 441-2; G. Jacob, *Altarab. Beduinenleben*, Berlin 1897, 57-8).

b. The records in Tradition are on the whole in keeping with the simple usages of the Arab pagan period. 'Ā'isha [*q.v.*] wore at her wedding with the Prophet a robe of red striped material which came from Baḥrayn (*dir' ḳiṭr*[in]; see Ibn al-Athīr, *Nihāya*, s.v. *ḳ-ṭ-r*) and "every woman in Medina, when dressing (for her *zifāf*), used to borrow it from her" (al-Bukhārī, *Hiba*, *bāb* 34). For Fāṭima's wedding with 'Alī, 'Ā'isha and Umm Salama made the preparations at home; they scattered soft dust from the Baṭḥā' or centre of Mecca over the ground and filled two cushions with fibre (*līf*) and teased it out. They laid out dates and figs to eat and sweet-tasting water to drink; they also put up at one side of the room a stand for the clothes and the water-skin (Ibn Mādja, *Nikāḥ*, *bāb* 24). Fāṭima's trousseau consisted of a silken robe with fringes (*khamīl*), a water-skin (*ḳirba*) and a cushion filled with rushes (*idhkhir*) (al-Nasā'ī, *Nikāḥ*, *bāb* 81). In another tradition, the Prophet allows considerable expenditure on large carpets with fringes (*anmāṭ*) (al-Nasā'ī, *Nikāḥ*, *bāb* 83). From numerous traditions (al-Bukhārī, *Nikāḥ*, *bābs* 58, 64; *Tafsīr*, sūra XXXIII, *bāb* 8; Ibn Mādja, *Nikāḥ*, *bāb* 21, 24; al-Nasā'ī, *Nikāḥ*, *bābs* 18, 77; Aḥmad b. Ḥanbal, iii, 196), it is evident that the bride was conducted by her mother and other female relatives to the house of the bridegroom. When the Prophet married 'Ā'isha, who was then six years old, she was brought by her mother Umm Rūmān to the Prophet's house; there women were awaiting her and greeted her with the saying "For good, and bliss, and good fortune". The women then washed her hair and adorned her while the Prophet stood smiling by. She was then handed over by the women to the Prophet (Muslim, *Nikāḥ*, *bāb* 69; cf. al-Bukhārī, *Nikāḥ*, *bāb* 58). Tradition gives no further details of the toilet; but the men seem also to have been perfumed; a perfume was used which left yellow stains (*khalūḳ*, *ṣufra* or *za'farān*), such as the Prophet noticed on 'Abd al-Raḥmān b. 'Awf still a few days after his wedding (according to Anas b. Mālik in al-Bukhārī, *Nikāḥ*, *bābs* 7, 55, 57; Muslim, *Nikāḥ*, trs. 79-81; al-Nasā'ī, *Nikāḥ*, *bābs* 67, 75, 84; Ibn Mādja, *Nikāḥ*, *bāb* 24; al-Dārimī, *Nikāḥ*, *bāb* 22; Aḥmad b. Ḥanbal, iii, 165, 190, 204, 227, 271). According to a tradition transmitted by Abū Hurayra, the Prophet uttered the following blessings at weddings: *bāraka 'llāh*[u] *lakum* (var. *laka*) *wa-bāraka 'alaykum* (var. *'alayka*) *wa-djama'a baynakumā fī* (var. *'alā*) *khayr*[in] or instead of the third part: *wa-bāraka laka fīhā* (Ibn Mādja, *Nikāḥ*, *bāb* 23; al-Tirmidhī, *Nikāḥ*, *bāb* 7; Abū Dāwūd, *Nikāḥ*, *bāb* 35; Aḥmad b. Ḥanbal, ii, 381, cf. i, 201, iii, 451; al-Nasā'ī, *Nikāḥ*, *bāb* 73; al-Dārimī, *Nikāḥ*, *bāb* 6), while he forbade the wish from the period of the Djāhiliyya *bi 'l-rifā wa 'l-banīn* "in harmony and with sons!" (al-Nasā'ī, *Nikāḥ*, *bāb* 73; Ibn Mādja, *Nikāḥ*, *bāb* 23; al-Dārimī, *Nikāḥ*, *bāb* 6; Aḥmad b. Ḥanbal, i, 201, iii, 451). The bride was conducted to the bridegroom by young girls who sang *ghazals*. Two opening lines of such a *ghazal* have been preserved: *ataynākum ataynākum fa-ḥayyānā wa-ḥayyākum* "we come to you, we come to you, may (God) give us long life and give you long life" (Ibn Mādja, *Nikāḥ*, *bāb* 21; cf. also al-Bukhārī, *Nikāḥ*, *bāb* 64) or *ataynākum ataynākum fa-ḥayyūnā nuḥayyīkum* "We come to you, we come to you, then greet us, we greet you" (Aḥmad b. Ḥanbal, iv, 78). The participation of women and children in the wedding ceremonies is, according to Anas b. Mālik, expressly approved by the Prophet (al-Bukhārī, *Nikāḥ*, *bāb* 76; *Manāsik al-Anṣār*, *bāb* 5). On these occasions, young girls used to beat tambourines (*duff*) and sing of the death of the champions of Badr, which the Prophet is definitely said to have permitted (al-Bukhārī, *Nikāḥ*, *bāb* 49; *Maghāzī*, *bāb* 12; Ibn Mādja, *Nikāḥ*, *bābs* 20, 21; al-Tirmidhī, *Nikāḥ*, *bāb* 6; al-Nasā'ī, *Nikāḥ*, *bābs* 72, 80; al-Ṭayālisī, no. 1221; Aḥmad b. Ḥanbal, iii, 418). Other instruments are mentioned, such as another variety of tambourine (*ghirbāl*; Ibn Mādja, *Nikāḥ*, *bāb* 20) and the drum (*ṭabl*; *ibid.*, *bāb* 21). The object of this music was to call public attention to the marriage (*ibid.*, *bāb* 20; al-Tirmidhī, *Nikāḥ*, *bāb* 6; Aḥmad b. Ḥanbal, iv, 5). According to one tradition, the Prophet is even said to have forbidden marriages to be performed in complete quiet (Aḥmad b. Ḥanbal, iv, 78).

A wedding feast (*walīma* or *ṭa'ām*) for the men was part of the wedding (al-Bukhārī, *Nikāḥ*, *bāb* 69; Aḥmad b. Ḥanbal, v, 359; Zayd, *Madjmū'*, no. 949; etc.). A feast is obligatory for the first day (*ḥaḳḳ*) and commendable for the second (*ma'rūf*; al-Tirmidhī regards it also as *sunna*), and on the third day ostentation (*sum'a wa-riyā'*, i.e. done in order that people may hear and see it) (al-Tirmidhī, *Nikāḥ*, *bāb* 10; Abū Dāwūd, *Aṭ'ima*, *bāb* 5; al-Dārimī, *Aṭ'ima*, *bāb* 28; Ibn Mādja, *Nikāḥ*, *bāb* 25; Aḥmad b. Ḥanbal, v, 28, 371). Sa'īd b. al-Musayyab (according to al-Dārimī, the

Prophet) is said to have accepted the invitation for the first two days, but refused that for the third (Abū Dāwūd, *Aṭʿima, bāb* 5; al-Dārimī, *Aṭʿima, bāb* 28). Al-Bukhārī, in the superscription to *Nikāḥ, bāb* 72, speaks of a week's feasting and says that the Prophet did not limit it to one or two days. The feast at the Prophet's wedding with Ṣafiyya consisted of *ḥays*, a dish of dates, curds (*aḳīṭ*) and fat, to which according to some traditions was added meal of roasted barley (*sawīḳ*) (according to Anas b. Mālik, in al-Bukhārī, *Nikāḥ, bābs* 13, 61, 69, *Buyūʿ, bāb* III; *Djihād, bāb* 73; *Aṭʿima, bāb* 8; Muslim, *Nikāḥ*, trs. 84, 87, 88; al-Nasāʾī, *Nikāḥ, bāb* 79; Aḥmad b. Ḥanbal, iii, 99, 102, 159, 195, 264); according to another tradition, the Prophet used on this occasion another 1½ *mudds* of the best kind of dates (*ʿadjwa*) (according to Djābir b. ʿAbd Allāh, in Aḥmad b. Ḥanbal, iii, 333). At the Prophet's wedding with Zaynab (according to Anas b. Mālik, in Muslim, *Nikāḥ*, trs. 87, 89, 91, 92; Aḥmad b. Ḥanbal, iii, 98, 105, 172, 196, 200, 263) and at the wedding of Rabīʿa al-Aslamī (Aḥmad b. Ḥanbal, iv, 58), bread and meat were given, which seems to have been usual along with *ḥays*, as in some cases it is specially mentioned that there was no bread and meat (Ibn Mādja, *Nikāḥ, bāb* 24; Mālik, *Nikāḥ, bāb* 48; Aḥmad b. Ḥanbal, iii, 99, 195, 264; al-Bukhārī, *Nikāḥ, bābs* 13, 61; al-Nasāʾī, *Nikāḥ, bāb* 79). In other passages, 2 *mudds* of barley are mentioned (al-Bukhārī, *Nikāḥ, bāb* 71; Aḥmad b. Ḥanbal, vi, 113), a sheep and millet (*ibid.*, v, 359); but for the *walīma*, at least a sheep should be slaughtered (according to Anas b. Mālik, in al-Bukhārī, *Nikāḥ, bābs* 7, 55, 57, 69, 70, *Daʿawāt, bāb* 54; *Adab, bāb* 67; *Buyūʿ, bāb* 1; Muslim, *Nikāḥ*, trs. 79-81, 90; etc.). Anas b. Mālik also records that his mother Umm Sulaym sent the Prophet a dish of *ḥays* on the occasion of a marriage and that the Prophet offered it to his guests in groups of ten until they were satisfied (Muslim, *Nikāḥ*, trs. 94, 95; al-Nasāʾī, *Nikāḥ, bāb* 84). Sahl b. Saʿd records that at the wedding of Abū Asyad al-Sāʿidī his bride offered the guests after the feast a beverage made by steeping dates (*naḳīʿ*), which she herself had prepared (al-Bukhārī, *Nikāḥ, bābs* 72, 78, 79, *Ashriba, bāb* 7, 9); al-Bukhārī concludes from this that, on the one hand, non-intoxicating beverages are allowed at weddings and, on the other, that women may wait on the men at a wedding.

As a rule, the traditions give no information about the time of the *walīma*. In the few passages which admit a definite time, the *walīma* took place after the bride had been taken to the bridegroom's house but before the wedding night (al-Bukhārī, *Tafsīr*, sūra XXXIII, *bāb* 8; Aḥmad b. Ḥanbal, iii, 196, and the other traditions about Zaynab's wedding); but the *walīma* at Ṣafiyya's wedding seems to have taken place on the next day, probably as a result of the special conditions, as the Prophet married her on the return of the expedition to Khaybar (al-Bukhārī, *Buyūʿ, bāb* 111, *Djihād, bāb* 73; Muslim, *Nikāḥ*, tr. 88; Aḥmad b. Ḥanbal, iii, 195, and the other traditions about this wedding; cf. however, one tradition about Zaynab's wedding in Aḥmad b. Ḥanbal, iii, 98, 105).

An invitation to a wedding feast ought always to be accepted (Muslim, *Nikāḥ*, trads. 100, 101; Abū Dāwūd, *Aṭʿima, bāb* 1; Aḥmad b. Ḥanbal, ii, 22). ʿAbd Allāh b. ʿUmar used never to refuse an invitation even when he was fasting (al-Bukhārī, *Nikāḥ, bāb* 78; Muslim, *Nikāḥ*, tr. 103; al-Dārimī, *Aṭʿima, bāb* 40). People of all conditions, rich and poor, should be invited; in one tradition given by Abū Hurayra, we read that "The wedding feast at which the rich eat and from which the poor are kept away is an evil feast" (Aḥmad b. Ḥanbal, ii, 494). For further references see Wensinck, *Handbook of early Muhammadan Tradition*, Leiden 1927, s.v. *Walīma*.

The following two traditions presumably refer to the procedure in the bridal chamber: "If any one of you marry a woman ... he shall take her by her forelock and pray (to God) for blessing (*baraka*) ... and pray to God for refuge from the accursed Satan" (Mālik, *Nikāḥ, bāb* 52), and "If any one of you marry a woman ... he shall say: O God, I pray Thee for her good and for her good inclinations which Thou hast created, and I seek refuge with Thee from her evil and from her evil inclinations which Thou hast created" (Abū Dāwūd, *Nikāḥ, bāb* 44). Umm Salama for her wedding night with the Prophet prepared a meal of barley and fat (*ʿaṣīda*) (Aḥmad b. Ḥanbal, vi, 307). According to many traditions (Anas b. Mālik, among others), it is a *sunna* for the young husband to spend seven days and nights with his young wife if she is a virgin (*bikr*) and only three days and nights if she is not (*thayyib*); only after this does the regular rotation with the other wives begin (al-Bukhārī, *Nikāḥ, bābs* 101, 102; Abū Dāwūd, *Nikāḥ, bāb* 33; al-Tirmidhī, *Nikāḥ, bāb* 40; Muslim, *Raḍāʿ*, tr. 45; Zayd, *Madjmūʿ*, no. 737; Ibn Mādja, *Nikāḥ, bāb* 26; Mālik, *Nikāḥ, bāb* 15; on the Prophet's marriage with Ṣafiyya [who was *thayyib*]: Abū Dāwūd, *Nikāḥ, bāb* 33; Aḥmad b. Ḥanbal, iii, 99; on the Prophet's marriage with Umm Salama [who was *thayyib*]: Muslim, *Raḍāʿ*, trs. 41-4; Ibn Mādja, *Nikāḥ, bāb* 26; Abū Dāwūd, *Nikāḥ, bāb* 33; Mālik, *Nikāḥ, bāb* 14; Aḥmad b. Ḥanbal, vi, 292, 295, 307, 313, 320, 321 [this was done at her request; the Prophet had given her the choice between seven and three days]). According to another tradition, the young husband should only stay three days with a virgin and two with a bride who is not a virgin (Aḥmad b. Ḥanbal, ii, 178; al-Tirmidhī, *Nikāḥ, bāb* 40).

As to the season of the year, the month of Shawwāl is expressly mentioned in Tradition as the month in which the Prophet celebrated his wedding with ʿĀʾisha (al-Nasāʾī, *Nikāḥ, bābs* 18, 77; Muslim, *Nikāḥ*, trad. 73; etc.).

c. In *fiḳh*, the Mālikīs pay special attention to wedding customs, since most of them are primarily intended to call public attention to the conclusion of the marriage. According to Mālik b. Anas, as well as Ibn Abī Laylā (cf. al-Sarakhsī, *Mabsūṭ*, v, 30), in contrast to other schools, making the wedding public (*iʿlān*) is a necessary condition for the validity of a marriage. Witnesses are not essential for the conclusion of a contract of marriage, although with the Mālikīs it is usual to have them in practice; if the two witnesses were not present at the conclusion of the contract, they must be present on the night of the wedding and, for example, push the bridegroom into the bridal chamber (al-Ḳayrawānī, *Risāla*, Cairo 1338, 66; Khalīl, ii, 1459; al-Kāsānī, *Badāʾiʿ al-ṣanāʾiʿ*, Cairo 1327, ii, 252; Ibn Rushd, *Bidāyat al-mudjtahid*, Cairo 1349, ii, 16, where we already find witnesses mentioned among the essentials). On the same grounds of publicity, Khalīl (ii, 1) also recommends congratulations to the bridal pair. The doors of the house should therefore not be closed at the *walīmat al-ʿurs* (*ibid.*, 117). This *walīma* is considered praiseworthy (*mustaḥabb*) among the Mālikīs, Ḥanafīs and Ḥanbalīs, while the Shāfiʿīs hold a stricter view; according to one view, it is *sunna muʾakkada*, according to the others, it is even *wādjib* (cf. al-Shīrāzī, 205; al-Ghazālī, ii, 22; al-Nawawī, 90; al-Ardabīlī, ii, 94). According to Khalīl, it should be held the day after the wedding,

according to other Mālikīs, however, before, so that the wedding is only consummated after its public proclamation (al-Tīdjānī, *Tuḥfa*, 35). A wealthy man should kill at least a sheep, a poorer man provide as much as he can afford (al-Shīrāzī, al-Ardabīlī). To accept an invitation to a *walīma* is, according to the Ḥanafīs, praiseworthy (*mustaḥabb*), among the Mālikīs, while the Ḥanbalīs and the Shāfiʿīs, on the other hand, consider it a duty (*wādjib*; al-Shāfiʿī, *Umm*, vi, 178, says a *ḥakk*). Among the Shāfiʿīs it is praiseworthy to accept the invitation for the second day also; on the other hand, it is best to refuse it for the third day (al-Nawawī describes acceptance for the third day as *makrūh*). If the person invited is fasting, he should nevertheless accept the invitation; he need not, however, eat anything, but it is best if he breaks his fast unless he is pledged to observe it. If an intoxicated man is at the *walīma*, or if wine or anything else forbidden is served, it is best to stay away, and likewise if there are in the room representations of living creatures, even if one tramples on them (e.g. on carpets). According to al-Shīrāzī, one should also stay away from the *walīma* where songs are sung, even if one does not listen to them and only pays attention to *ḥadīth* and eating. Music is on the other hand permitted to some extent, e.g. that of the tambourine (*duff*) already mentioned in Tradition. Khalīl gives a list of permitted instruments: another kind of tambourine (*ghirbāl*), an older kind of lute (*mizhar* [see ʿŪD]; cf. H.G. Farmer, *A history of Arabian music*, London 1929, 46-7), a kind of flute (*zummāra*) and horns (*būḳ*).

The question is much discussed whether one should scatter among the wedding crowd nuts, almonds and sweets (al-Ardabīlī also mentions dates, dirhams and dīnārs). According to al-Dimashḳī (ii, 76), Abū Ḥanīfa and Aḥmad b. Ḥanbal had no objections, while Mālik, al-Shāfiʿī and Aḥmad b. Ḥanbal in a second opinion declare the practice *makrūh*. The views of the later Shāfiʿīs are, however, divided. Al-Muzanī recommends the omission of the practice, as the things would be hurriedly picked up as plunder by the people; but it is not forbidden except when the people fall upon one another and try to take the things from each other. Al-Ghazālī allows the scattering of sweets, since it was allegedly done in the time of the Prophet, and al-Nawawī and al-Ardabīlī, while regarding it as permitted, consider it better omitted. Al-Shīrāzī, on the other hand, declares it *makrūh*.

2. Later usages down to the present day

d. For the older period we are dependent on occasional scattered notes; it is only with the literature of European travellers (from the 15th century onwards), with the recording of texts in dialect and the systematic collection of folklore in recent decades (Westermarck for Morocco, Jaussen for Nablus, etc.) that we have a wealth of material. These sources are, however, not all of equal value. On the one hand, particularly with the earlier literature, we have first of all to investigate the trustworthiness of the traveller. For example, the Fleming Van Ghistele who made a pilgrimage in 1481-5, says (*Voyage*, Ghent 1557, 15) that before the marriage contract is signed the bridal pair is put one in each of two adjoining rooms with an eyehole through which they can see one another naked. This is contradictory to Muslim ideas (but note the fact that some jurists like Dāwūd al-Ẓāhirī permit the man before marriage to see the whole of the woman's body except the pudenda; Ibn Rushd, *Bidāya*, ii, 3; al-Dimashḳī, *Raḥma*, ii, 62). On the other hand, there are gaps in the records of the travellers; they only record what was done in the street or more or less publicly. Full accounts of the customs observed, as in Leo Africanus and Lane, are by no means numerous and can be supplemented for the earlier period by scattered references in the *Alf layla wa-layla* and the popular romances.

Wedding customs are more or less distinct according to country. This is most clearly seen on the periphery of the Muslim world, for example in the Malay Archipelago, in Central Africa or among the Ḳirkhīz and Turkomans. Here Islam has taken over old local customs and sometimes adapted them to its point of view. For the original lands of Islam, however, the same observation can be made, except that the process was completed in the early centuries of Islam. In modern Syria and Egypt the customs among Muslims and Christians are almost identical except as regards purely ecclesiastical and religious matters (cf. the sketches in Littmann, *Neuarabische Volkspoesie*; Jaussen, *Coutumes palestiniennes*; Blackman, *The Fellāḥīn of Upper Egypt*, 93). This fact shows that we have to deal in this case with old customs of the Middle East, at any rate, not with specifically Muslim practices. In this connection one may call attention to the already-mentioned elaborate pre-Islamic practices in Syria and Mesopotamia. A pre-Islamic origin can in some points be definitely proven. In many districts, the Muslim bride wears a crown of flowers or of pasteboard (see below); in this one may discern the adoption of a practice of the Christian East where the crowning of the bride was and still is a part of the wedding ceremony. (This crowning is mentioned as early as a liturgical poem by Ephraim the Syrian, in Denzinger, *Ritus Orientalium*, Würzburg 1864, ii, 443; in Barhebraeus, in *ibid.*, ii, 385; among the Copts of the 12th century, in *ibid.*, ii, 365; cf. also *ibid.*, ii, 391 ff., 408 ff., 433 ff.) The carrying of lights in the bridal procession may also be of Christian origin (for the Copts of the 12th century, cf. Denzinger, ii, 364; cf. the carrying of lights in the Mawlid [*q.v.*] festival and its Christian origin, iii, 420). The ceremonies on the seventh day have also their parallels in the Christian liturgy of the East; among the Copts, on the seventh day, the bridal crown is solemnly removed (Denzinger, ii, 380).

From the point of view of methodology, it would be more correct to deal with wedding customs by regions, but here some account is given of the most important customs in vogue in towns in the old lands of Islam as far as possible treated historically. It should be noted in this connection that practices differed in different levels of society. Therefore, three groups have at least to be distinguished: customs in the towns; among the fellāḥīn; and among the Bedouins. The two last-named were essentially simpler and agreed more with the old Arab practices than did those of the town-dwellers.

Among the Ruwala Bedouin [*q.v.*] (Musil, *The manners and customs of the Rwala Bedouins*, New York 1928, 228 ff.), a camel was killed on the morning of the

wedding before the bridegroom's tent and its flesh distributed. In the course of the day, the bride put up her tent—the woman always brought it with her—and at night she was taken by a few female relations in all secrecy to this tent; soon afterwards the bridegroom entered the tent. There were no ceremonies, no singing or dancing, not even the usual *zag̲h̲ārīt* cries of the women. On the next morning, the bridegroom went to his relatives while the bride was visited by the women and congratulated; she then received a gift from her father-in-law and remained for seven days in her tent while the bridegroom went about his usual business. He had, however, to spend seven nights with his young wife (cf. the traditions in *b.* above). Among other Bedouin tribes in Arabia Petraea (Musil, *Arabia Petraea*, iii, 196 ff.), the youths and maidens sang bridal songs and danced. Here as in the Sinai Peninsula (Burckhardt, *Notes on the Bedouins and Wahhabys*, London 1831, Ger. tr. Weimar 1831, 216-17) the bride ran away into the desert after the first night, sometimes for six days, sometimes even for longer and the husband had to go to look for her.

Between these very simple practices of the Bedouin and the highly-developed rites of the town-dwellers, numerous intermediate stages are to be found among the fellāḥīn, among whom we can observe the gradual advance of usages from the towns.

Weddings were celebrated with great pomp at the ʿAbbāsid court in Bag̲h̲dād. In the sources, sums of 50 and 70 million dirhams are mentioned as having been expended by the caliphs Hārūn al-Ras̲h̲īd and al-Maʾmūn for their weddings. But the common people, also, on such occasions liked to appear wealthier than they really were. Even in early times, the coiffeuse used to lend ornaments to the bride (cf. the tradition above in *b.* about ʿĀʾis̲h̲a). The carpets, utensils, etc. were also sometimes borrowed (Mez, *Renaissance des Islāms*, 404, 453).

As was mentioned at the beginning of the article, two kinds of weddings have to be distinguished: the *ʿurs* and the *ʿumra*. The *ʿurs* seems to be the usual kind; at least, it is almost exclusively the one that is described by travellers. We find the *ʿumra*, for example, in the case of the wedding of al-Maʾmūn with Būrān (210/825; al-Ṭabarī, iii, 1081 ff.); in Ibn al-Mud̲j̲āwir (d. 690/1291), in Landberg, *Études sur les dialectes de l'Arabie méridionale*, ii/2, 859, for Mecca; *Alf layla wa-layla*, tr. Littmann, i, 263 ff.; in the Ḳaragöz play *The wrong bride*, in Ritter, *Karagöz*, Hanover 1924, 109 ff.

Here we may also note that these wedding customs are only observed when a woman marries for the first time. When she marries for the second time, they are content with the legal *walīma*. The parties often agree to have no festivities (Snouck Hurgronje, *Mekka*, ii, 155; Lane, *Manners and customs*, London 1871, i, 219-20).

The celebrations extend over several days; they usually begin on Monday and the actual wedding takes place on Thursday. In Arab popular poetry, we therefore have frequent reference to seven days of celebration while the *dukhla* takes place on the eighth (e.g. *Alf layla wa-layla*, ii, 461, iii, 437; *Sīrat Sayf b. D̲h̲ī Yazan*, iii, 22, 33, v, 28, xii, 59). When, however, we find references to 30 days of feasting and the 31st night as the *laylat al-duk̲h̲la* (*Alf layla wa-layla*, iii, 642; *Sīrat Sayf*, xii, 45, xiii, 12) or when 40 days and nights are mentioned in Turkish romances and fairy tales (O. Spies, *Türkische Volksbücher*, Leipzig 1929, 25), this is only a stereotyped literary form to express that the wedding celebrations lasted a long time.

The principal customs are as follows:

1. Immediately after the formalities of the marriage contract, the *walīma* takes place in the bride's house; only men are present at it. This is already found in *ḥadīt̲h̲*. On this occasion, sweets, money and other things are often thrown to the crowd. For example, the vizier al-Ḥasan b. Sahl [*q.v.*] at the wedding of his daughter Būrān with al-Maʾmūn had tickets scattered among the nobles on which were inscribed the names of pieces of land, slave-girls and the distinguishing marks of horses. Any one who caught one of the tickets received what was written on it. The vizier also had gold and silver coins, little bags of musk and pieces of amber thrown among the populace (al-Ṭabarī, iii, 1083 below; al-Masʿūdī, *Murūd̲j̲* vii, 65-6 = § 2752). At the *walīma* on the occasion of the wedding of the Mamlūk Muḥammad b. al-Sulṭān (920/1514), wine (*sakar*) was served in vessels of Chinese porcelain (Ibn Iyās, iv, 406). In general, however, the *walīma* consisted simply in the offering of sweets and other dainties (cf. *Alf layla wa-layla*, ii, 23-4); sometimes, however, roast meat and vegetables, etc. were also served. Music and dancing are not usual on this day. In the Palestinian town of Nābulus, according to Jaussen, there was only a meal for the women, while in Fās a feast was held in the house of both bride and bridegroom (Leo Africanus, 1526; Tharaud, 1930). The real wedding ceremonies did not usually begin until a week later.

2. A few days before the wedding, the bride goes to the bath with her friends; rich people perform this ceremony in their own house, but usually, however, a public bath is hired for a whole or half day. In Cairo in Lane's time, they went with great pomp to the bath (*zaffat al-ḥammām*). In front walked two men carrying dishes on which lay the bath requisites, covered; then came water-carriers and men with rose water and censers to sprinkle the passers-by and offer them beverages. Then came musicians with oboes and drums and the bride's friends two by two. The bride herself, thickly veiled with a crown on her head, walked between two female relatives under a canopy carried by four men; musicians again brought up the rear of the procession. In the bath itself there were all kinds of diversions and feasting, while women singers sang songs. In the evening, there was a banquet in the house for the women at which female singers sang to pass the time. In early 20th century Fās, the bride was taken to the bath and led home dressed like a doll with shouts of joy (Tharaud). In 16th century Morocco, the bride's bath before the wedding was unknown (Leo Africanus) while in Algiers in the same period, according to Haëdo, the bridal bath was usual. It was also unknown in Mecca. In Syria and Anatolia, they went very quietly to the baths, while Cotovicus at the end of the 16th century in Syria saw a solemn procession with wax candles.

In the bath itself, numerous ceremonies and diversions took place. In Nābulus (Jaussen, 1927) the bride was put on a throne in the bath while her friends sang and danced around her with lights in their hands. They then all bathed, the bride last. After the bath, the bride was sprinkled with perfume and refreshments were taken. She was then taken home very quietly and thickly veiled. For Istanbul, White (*ca.* 1840) also reports that the bride sat on a throne while dramatic presentations were given and refreshments offered. Then came, just as in Persia (Polak, *ca.* 1860, and Tunis (Bertholon, *ca.* 1900)), the henna ceremony, which in other lands did not take place till next day. The finger-nails (in Persia also the hair) were dyed

with henna. The guests thereupon distributed money to the bath attendants. This was called the "henna gift".

3. The day of the adornment of the bride. This day is often called after the principal ceremony *laylat al-ḥanna* or *ḥenna gedjesi* (e.g. in Mecca, Egypt, Tunis and in Turkey). In the presence of her female relations and friends, the bride's eyelids were blackened with *kuḥl* and the hands and feet coloured with henna. In doing this, the hands and feet had to be coloured exactly the same and no pictorial representations put on them (cf. Abū Bakr Aḥmad b. Muḥammad al-Marwazī [d. 275/888], *K. al-Waraʿ*, Cairo 1340, 104). In earlier times, yellow patches (*nuḳaṭ al-ʿarūs*) used to be put upon the cheeks (Dhu 'l-Rumma [d. 107/719] in *Aghanī*, xvi, 115; al-Maydānī, ii, 762, no. 24; al-Sharīshī [d. 619/1222], in the commentary on Ḥarīrī, *Maḳāmāt*, 610). On the same day, the bride's wedding ornaments were put on, including necklaces, bridal girdle (*ḥiyāṣa*: cf. *Sīrat Sayf*, xvii, 53), crown (*tādj* or *iklīl*; oldest reference, *ibid.* [9th/15th century], iv, 36, xvii, 53; cf. also the title of the celebrated dictionary *Tādj al-ʿarūs*). The bride on these occasions often put on different dresses (e.g. in Sfax, Narbeshuber; cf. *Alf layla wa-layla*, i, 265 ff., 6 different dresses). The great display in silver pendants and foot-rings, pearls, henna, aloe-wood (for perfuming the face), rose-water, sesame-oil and other aromatics is already mentioned in the papyri (cf. *Papyrus Ersherzog Rainer, Führer*, nos. 584, 1014). After being dressed, the bride was put on a raised seat or throne, where she had to sit quite still with downcast eyes while the women guests sang, danced and made music. These ceremonies often lasted far into the night (for the older period, see Leo Africanus for Morocco; d'Arvieux, 1674, *Mémoires*, Paris 1735, v, 287, for Algiers; and the other travellers). In Mecca and Sfax (Narbeshuber), the enthronement did not take place till the next day. In Cairo (Lane, 1835) on this day the bride took a lump of henna in her hand and her friends stuck coins into it. In Nābulus (Jaussen) there was a similar collection for the bride. In Istanbul also there was the henna ceremony, but before it, all the women guests with wax candles in their hands went into the garden with the bride and danced there in long rows (Garnett, *ca.* 1890). Pictures of the bride in her wedding finery can be found in Snouck Hurgronje, *Mekka*, Bilder-Atlas, pl. 25; Goichon, *La vie féminine au Mzab*, Paris 1927, pl. 5.

4. As Friday is frequently recommended by the theologians for the completion of marriage (see al-Ghazālī, in H. Bauer, *Islamische Ethik*, Halle 1917, ii, 90), it was the custom to take the bride to her new home on Thursday evening where she passed the night with her husband. The bride was usually fetched by her bridegroom and his relations and accompanied by her own relatives in an imposing and solemn procession (*zaffat al-ʿarūsa*). From the superscription alone in al-Bukhārī, *Nikāḥ*, *bāb* 62 (*al-bināʾ bi 'l-nahār bi-ghayr markab wa-lā nīrān*), it is clear that the solemn procession was general as early as the beginning of the 3rd/9th century; in those days, the bride was taken at dusk in a litter borne on a beast of burden and accompanied by lighted torches (cf. al-Tīdjānī, *Tuḥfa*, 40-1, who for this reason makes a distinction between a bridal procession by day and one by night; but the *bi-ghayr markab* is against this). The other oldest references for the bridal procession appear to be the wedding of Umm al-ʿUluww in Ḳayrawān (425/1024): the bride was taken on Thursday by slaves and nobles of the kingdom to the tent put up for her (Ibn ʿIdhārī, *Bayān al-mughrib*, ed. Dozy, i, 284). In a story from al-Yamāma, the bride is accompanied by slave-girls who sing and play stringed instruments (*maʿāzif*) (al-Ḳazwīnī [d. 682/1283], *Athār al-bilād*, ed. Wüstenfeld, ii, 88). A miniature by the painter Yaḥyā b. Maḥmūd of Wāsiṭ of 634/1237 in the Paris ms. of al-Ḥarīrī, B.N. Arabe 5847 (Kühnel, *Miniaturmalerei im islamischen Orient*, Berlin 1923, pl. 13) shows a bridal procession: in front go horn-blowers, drummers and men with pennons sitting on camels; the bride herself is completely hidden in a splendid camel-litter and the bridegroom rides beside her on a finely caparisoned horse. Further references may be found e.g. in *Alf layla wa-layla*, ii, 12; *Sīrat Sayf*, xiii, 12. The oldest western reference is in the travels of the Dominican monk Ricoldus de Monte Crucis (d. 1309), ch. 9, 46 (Laurent, *Peregrinatores medii aevi*, Leipzig 1864, 116). Later European travellers all describe the bridal procession more or less fully. In early 20th century Fās, as in the time of Leo Africanus (1526), she sat in a silk-hung octagonal box which was carried on the shoulders of eight men (Westermarck, 166) or she went on foot if she belonged to the lower classes (Westermarck, Tharaud), while in the rest of Morocco a "covered cage" on a mule was generally used (Mocquet 1605, Hoest 1760, Westermarck, 1914). In Algiers in the 10th/16th century, she was also carried (Haëdo). In Egypt and Syria, she walked or rode under a canopy (so as early as Cotovicus, 1598). In Turkey, in early Ottoman times, the bride used to ride on a horse (Dernschwam, 1553) usually veiled in a red silk cloth, the ends of which were held up by many people accompanying her (Schweigger, 1578; Della Valle 1615; Tournefort, 1717). In the Turkish album of miniatures of the 11th/17th century published by Taeschner as *Altstambuler Hof- und Volksleben* (Hanover 1925, pl. 32) she is on foot, led by two women. According to Della Valle, in place of the procession of lights in front of the bride, a tall candlestick was carried which was made with flowers, painted paper, beaten gold, and other foliage, sometimes decorated with gold, silver and ivory; Schweigger (cf. the pictures there) describes them as "wedding candles of green wax, made transparent but not burning". In the same connection may be mentioned the tray of candles which is carried before the bridal procession in the Ḳaragöz play *The wrong bride* (illustr. in Ritter, *op. cit.*, fig. 34). In the 19th century, the bride rode in a covered carriage, as did the women accompanying her, while the men were on horseback (White, Garnett). In Persia she usually rode, robed in red (Olearius, 1637; Chardin, 1673; Polak, *ca.* 1860; Wills, *ca.* 1870). For pictures of the bridal procession see for Morocco, Dapper, *Beschreibung von Africa*, Amsterdam 1760, 177; for Cairo, Niebuhr [1763], *Reisebeschreibung nach Arabien*, Copenhagen 1774, pl. 28; Cassas, *Voyage pittoresque*, Paris 1806, pl. 63; Lane, *Manners and customs*, pls. 32-3; for Istanbul, Schweigger, *Reyssbeschreibung*, 207; Taeschner, *loc. cit.*

The trousseau was usually carried in the bridal procession, distributed over as many horses and mules as possible; often empty chests were carried to make the trousseau look as large as possible, while in many districts the delivery of the trousseau was a special solemn ceremony (see e.g. Ibn ʿIdhārī, i, 284, for Ḳayrawan [415/1024]; Ibn Iyās, iv, 107, for Cairo [912/1506]).

On leaving her parents' house and entering her new home, a series of symbolic ceremonies were performed which referred to married life, averting evil spirits, fertility, etc. In her new home, she was wel-

comed by the bridegroom or her mother-in-law and taken to the bridal chamber. There she was placed by the women on a high chair or throne and congratulated. Sometimes the bridegroom then gave her a present of money—if only a piastre—and she was unveiled so that the bridegroom saw her face for the first time. In a (not genuine) *ḥadīth* in al-Muḳaddasī it is said "God shall place Muʿāwiya by his side and cover him and then unveil him to the people like a bride". The throne (*minaṣṣa*) on which the bride was raised and unveiled is mentioned as early as al-Zawzanī (d. 486/1093) and al-Baṭalyūsī (d. 494/1100, in their commentaries on the *Muʿallaḳa* of Imruʾ al-Ḳays, ed. Hengstenberg, Bonn 1823, v. 32, or Cairo ed. 1282, 33). Cf. also *Alf layla wa-layla*, iii, 455; *Sīrat Sayf*, v, 29, where a throne (*sarīr*) of juniper wood decorated with plates of gold and shining jewels is mentioned. In Mecca in the later 19th century, the throne was called *rīka* (= *arīka*); see the picture in Snouck Hurgronje, *Bilder aus Mekka*, Leiden 1889, pl. 18.

The bridal procession was followed by a feast which lasted far into the night with music, singing and dancing (the men and women, of course, separate); in Turkey of the 17th-18th centuries Ḳaragöz performances were also given (Thevenot, *Vayages*, Paris 1689, i, 172, cf. i, 109-10), while in 18th century Persia wrestlers (*pahlawān*) performed (Chardin). A Persian miniature of 1604 shows festivities on the occasion of a wedding in the reign of the Saldjūḳ sultan Alp Arslān (Grohmann and Arnold, *The Islamic book*, Munich 1929, pl. 67).

5. The bridegroom's bath and his *zaffa* take place on the same day as the bridal procession, i.e. on the Thursday; a visit is usually made to a mosque in connection with it (cf. *Alf layla wa-layla*, ii, 24). In the story of Nūr al-Dīn and Shams al-Dīn (*ibid.*, i, 263)—it is, however, a case of *ʿumra*—the bridegroom goes to the bath and is carried on horseback in a torchlight procession to the bride's house; singers with tambourines accompany him and stop from time to time to get money from the bridegroom. Another *zaffa*—but without a bath—is described in the *Sīrat Sayf*, xiii, 12. The bridegroom rides on a richly caparisoned steed through the town accompanied by dignitaries. Wax candles with camphor are carried, while slaves swing censers and sprinkle rose and jasmine water (cf. *ibid.*, vii, 63, xv, 32). Ibn Iyās (iv, 107, 196) records for Cairo in the early 10th/16th century that the bridegroom goes through the streets accompanied by *amīrs* with lighted candles in their hands. This was also still usual in Lane's time in Cairo. Shortly before sunset, the bridegroom was taken by his friends to the bath, accompanied by musicians or singers and torches (*mashʿal*); from there, they went to the mosque to attend the evening prayer. On their way back from the mosque, the friends carried candles and flowers in their hands. For a later date (*ca.* 1875), Klunzinger describes the bridegroom's bath and *zaffa* for Ḳuṣayr on the Red Sea. In other lands, the bridegroom's bath appears to be less usual; at least, it is only rarely mentioned in the sources (for Palestine, Rothstein, 1907, with pictures of the *zaffa*, and Jaussen, 1927; for Tunis and Sfax, Bertholon and Narbeshuber, *ca.* 1900; for Tlemcen, Gaudefroy-Demombynes, 40, *ca.* 1900; for Tangiers, Westermarck, 118; for eastern Anatolia, van Lennep, *Travels*, 267, *ca.* 1860; for Persia, Polak). The bath and *zaffa* seem to have been quite unknown in Istanbul. Similarly, the bath (but not the *zaffa*) for the bridegroom has been long unknown in Mecca (Ibn al-Mudjāwir, d. 690/1291, in Landberg, *op. cit.*; Snouck Hurgronje; Rutter), while Niebuhr, *Reisebeschreibung*, i, 402, mentions both in 1763 for Yarīm in South Arabia. Leo Africanus also did not know of the bath in Fās (nor does Westermarck or Tharaud); on the other hand, he describes an imposing procession of the bridegroom, which met the bridal train in the principal square of the town and went home along with it. Pictures of the splendid *zaffa* of the bride in India: Thevenot, *Voyages*, Paris 1689, iii, 66; H. Goetz, *Bilderatlas zur Kulturgeschichte Indiens in der Grossmoghul-Zeit*, Berlin 1930, pl. 15 (18th-century miniature).

6. The wedding night (*laylat al-dukhla*). During the festivities mentioned at the end of section *b.* above, the bridegroom goes to the bridal chamber, or feigning reluctance, is thrust in by his friends. In addition to the evidence from Tradition, we have two descriptions from the early Islamic period of the proceedings in the bridal chamber. According to one (*Aghānī*, xv, 70), the caliph ʿUthmān stroked his bride Nāʾila on the head, asked the blessing of God (*baraka*) upon her and then unveiled her. According to the other (*ibid.*, xvi, 37), Shurayḥ took his bride Zaynab by the forelock while she knelt down, then prayed two *rakʿa*s with her, just as was the usual practice in the two enthronement ceremonies in Mecca (Snouck Hurgronje, ii, 180, 185). In the oldest parts of the *Alf layla wa-layla* (Baghdād stratum, *ca.* 4th/10th century), we find the following usages. In the story of Nūr al-Dīn and Shams al-Dīn (i, 269-72) the bride is undressed by her maids and led by an old woman in a long robe into the bridal chamber where the bridegroom awaits her. While in this case the unveiling has already taken place, in other passages it is only done by the bridegroom himself in the bridal chamber (e.g. iii, 524). In the story of Uns al-Wudjūd and al-Ward fi 'l-Akmām (iii, 437-9), the two drink together and entertain one another with poems and entertaining stories. In the story of Ḳamar al-Zamān (ii, 478-9), after the consummation the bride summons her maids who give shouts of joy.

In Cairo in Lane's time, the bridegroom was carried by a friend a part of the way up the steps to the harem, during the festivities. He was only allowed to unveil his bride in the bridal chamber and see her for the first time in return for a sum of money. He then undressed her, laid her with her head in the direction of Mecca and performed two *rakʿa*s. After the consummation he summoned the women waiting outside the door to give shouts of joy (*zaghārīt*) and then returned to the guests. Jaussen gives a similar description for early 20th-century Nābulus. Polak records a very old and widespread practice for Persia (Leo Africanus knew it for Fās, Haëdo for Algiers, Bertholon for Tunis): after the unveiling, the couple try to tramp on one another's feet; the idea being that whoever does it first will be master in the house. In Turkey, according to Schweigger, the bride was pushed into the bridal chamber by her companions with jests and scoldings. In the 18th and 19th centuries in Turkey, after the unveiling and the usual prayers in the bridal chamber, coffee was served to the bridal pair and then a wedding feast held. Only then were they left alone (Olivier, White, Garnett).

In some districts of Morocco (e.g. Fās), it was considered seemly for the bridegroom only to entertain his bride in the first night and to consummate the marriage only in the second night (Tharaud; Westermarck, s.v. *Consummation*). In Egypt, on the other hand, it was a frequent practice to deflower the bride by mechanical means (Schwally, in *Nöldeke-Festschrift*, 418-19). Both these customs were due to superstition, the

fear of evil spirits, and perhaps in the first case, to a certain feeling of shame.

During the wedding night, if the guests were still there, or on the next morning, the nurse showed the token of virginity to the women friends and relatives. In some districts, the bloodstained cloth was carried through the streets to the house of the bride's parents with drumming and shouts of joy. This is reported by Mocquet 1605 and Hoest 1760 for Morocco, Tournefort 1717 for Turkey, while in Burckhardt's and Lane's time in Cairo, it was only the custom among the lower classes. If the bride was not a virgin, the bridegroom could send her back to her parents. The nurse or the mother therefore frequently made arrangements in case of need. In the *Alf layla wa-layla* (ii, 478) a pigeon is killed.

On the morning after the wedding night, in obedience to the precepts of religion, both go to the bath [see ṬAHĀRA].

7. The ceremonies after the wedding night, especially on the seventh day. Sometimes the prescribed *walīma* was not performed till the day after the wedding night (see above, under *b.*). This is also the case in the story of Ḳamar al-Zamān (*Alf layla wa-layla*, ii, 461, 478). In Turkey on this day, the wedding ceremonies concluded with a feast, the "festival of the sheep's trotters", as it was called from a traditional dish; then the bride had one or two days to receive congratulations (Garnett, 1890). In Egypt and North Africa, the bride remained for a week in the bridal chamber and was visited and entertained by her female relatives. On the seventh day the bride and bridegroom usually held a reception or gave a banquet. The first seven days of marriage called *sābiʿ al-ʿarūs* have always played a special part and go back to a usage sanctioned by the Prophet (cf. Dozy, *Suppl.* i, 626-7 and see above, under *b.*). In the story of Uns al-Wudjūd, women singers come on the seventh day and gifts are scattered among the populace (*Alf layla wa-layla*, ii, 439-40). Leo Africanus mentions "a very old custom" in Morocco: on the seventh day the husband buys fish, which his mother or other women throw over the bride's feet. A similar practice was still found in Sfax *ca.* 1900 (Narbeshuber, 16). Probably there is some old magical practice to secure fertility concealed in this.

In conclusion, one may briefly mention the entirely different customs in Mecca and Medina as recorded by Snouck Hurgronje (1884) and Rutter (*ca.* 1928) for Mecca and Burton (1853) for Medina. Here there was a peculiar combination of the two kinds of wedding, the *ʿurs* and the *ʿumra*. On the evening of the fourth day, the day of the *g̲h̲umra* (= *ʿumra*), the bride in her wedding finery was put on a throne in her house, while the bridegroom went to the Ḥaram in a procession with lights, to attend the evening prayer there and then went to the bride's house. There he was taken into the throne room, where he unveiled his bride. After a supper, everyone, including the bridegroom, went home. Towards morning, the bride was taken by a few women secretly in a litter borne by two mules to the house of the bridegroom, which was in keeping with the old Arab practice. After a meal with the bridegroom, the throne scene was repeated in his house in a simpler form, after which consummation took place. From this duplication, a combination of two different ceremonies, it may be concluded that these Meccan wedding customs were not native to Mecca and Medina, but that some features had penetrated in course of time from lands adjoining Arabia, and had been combined. This is confirmed by the simple practices in pre-Islamic and early Islamic Arabia (see above, under *b.*), and also by Ibn al-Mud̲j̲āwir (in Landberg, *op. cit.*, 859) who describes a pure *ʿumra* for the 7th/13th century in Mecca: the bridegroom goes to the Ḥaram, performs the sevenfold circumambulation, two *rakʿa*s at the Maḳām Ibrāhīm, kisses the Black Stone (i.e. makes the *ṭawāf* [*q.v.*]) and then goes with candles to the bride's house.

Weddings are usually celebrated in Muḥarram in Mecca, when the Pilgrimage is over and most of the pilgrims have gone (Ibn al-Mud̲j̲āwīr, *op. cit.*; Burckhardt, *Travels in Arabia*, i, 361).

(W. HEFFENING)

URTUḲIDS [see ARTUḲIDS].

ʿURŪBA (A.), lit. "the quality or nature of Arabness". In modern political parlance, it refers to the doctrine of Arabism, or pan-Arabism; the term is illustrative of the manner in which established words acquired new meanings under the influence of European political concepts. Until approximately the end of World War I, *ʿurūba* was a politically neutral term that simply meant the quality of being an Arab (Lane). Beginning in the interwar period and culminating in the Djamāl ʿAbd al-Nāṣir era, *ʿurūba* was transformed into an affirmation of Arab national identity.

The sentiment that evolved into modern Arabism originated in the Salafiyya reform movement [*q.v.*, and see also IṢLĀḤ. i] with its emphasis on the distinctly

Arab features of formative Islam. It acquired secular characteristics through the cultural and political activities of some members of the Arab élite during the Young Turk era. Although historians have used the term Arabism to designate the proto-nationalism of these early activists, the word *ʿurūba* does not appear with any frequency in the Arab political journalism of the period. However, with the end of the Ottoman Empire in 1918 and the emergence of separate Arab states in its place, the need arose for an expanded vocabulary that could express new forms of national identity. It was in this context that the meaning of *ʿurūba* was politicised.

In its modern usage, *ʿurūba* is an emotive term that does not lend itself to precise definition. For the secular ideologues who invested the word with its political content, it was synonymous with Arab nationalism [see ḲAWMIYYA. i] and the imperative of Arab unity. As a political creed, Arabism assumed the existence of an Arab nation based on shared bonds of language and history. The expression of feelings of identification with that nation and the desire that it should become a single unified state were embraced by the concept of Arabism. The most influential proponent of secular pan-Arabism was the Iraqi-based educator Sāṭiʿ al-Ḥuṣrī (1880-1968 [*q.v.* in Suppl.]), who defined the concept as an urgent call for action: "More than religion, more even than patriotism and nationalism, the banner under whose shade all Arabs should unite is the banner of Arabism and we should all say, 'Arabism first!'" (*al-ʿUrūba awwal^an^*, 190). From this perspective, Arabism pre-dated Islam and included all Arabs, not just the Muslims among them. Yet it must be noted that the question of the compatability of Arabism and Islam and the nature of the relationship between them have been widely debated within Arab political and intellectual circles.

The vagaries of domestic politics and regional alignments caused Arabism to receive differing degrees of emphasis in individual Arab states. The original Baʿth Party of Syria endorsed the nationalist principles of Arabism, and a succession of post-independence régimes described Damascus as *ḳalb al-ʿurūba al-nābiḍ*. By contrast, Egyptian politicians of the interwar era initially rejected Arabism as an alien form of identity, but by the late 1930s the doctrine had become integrated into the Egyptian self-view, thus laying the groundwork for the Nāṣir regime to make the pursuit of Arabism a central feature of its foreign and domestic policies. However, the failure of Nāṣir to fashion an effective Arab union, the persistence of inter-Arab tensions, and the decision of some Arab leaders to sign peace agreements with Israel in the 1990s, deprived political Arabism of the potency and promise that it once possessed.

Bibliography: For the modern origins of the concept, see C.E. Dawn, *From Ottomanism to Arabism. Essays on the origins of Arab nationalism*, Urbana 1973; Rashid Khalidi *et alii* (eds.), *The origins of Arab nationalism*, New York 1991; and Sylvia G. Haim (ed.), *Arab nationalism: an anthology*, Berkeley 1962. The works of Sāṭiʿ al-Ḥuṣrī are essential, including *al-ʿUrūba awwal^an^*, 5th ed. Beirut 1965, and *Difāʿ ʿan al-ʿurūba*, Beirut 1956. See also W.L. Cleveland, *The making of an Arab nationalist: Ottomanism and Arabism in the life and thought of Satiʿ al-Husri*, Princeton 1971; and Israel Gershoni and J.P. Jankowski, *Defining the Egyptian nation, 1930-1945*, Cambridge 1995 (excellent case study). (W.L. Cleveland)

URUDJ b. ʿĀdil (*fl.* late 15th-early 16th century), Ottoman historian and author of one of the earliest histories in Turkish of the Ottoman dynasty. Urudj b. ʿĀdil el-Ḳazzāz was the son of a silk merchant, lived in Edirne and was a *kātib* [*q.v.*] by profession. His only known work, the *Tewārīkh-i āl-i ʿOthmān*, was composed most probably during the reign of Bāyezīd II [*q.v.*]. No other biographical details about him are known.

For early Ottoman history, Urudj's history was based largely on royal calendars, *taḳwīm*s, and on various *menāḳib-nāme*s, including that by Yakhshī Faḳīh [*q.v.*], which also served as a principal source for other Ottoman historians writing independently in the later 15th century (cf. H. İnalcık, *The rise of Ottoman historiography*, in B. Lewis and P.M. Holt (eds.), *Historians of the Middle East*, London 1962, 152-67). His accounts of the reign of Meḥemmed II [*q.v.*] and of the first half of the reign of Bāyezīd II are fuller and contain more individual information. Many manuscripts of the work exist, though some are only partial, and the textual history is further confused by the false attribution to Urudj of later continuations dating from the early and mid-16th century. It now appears that Urudj made two principal recensions of his chronicle, the first *ca.* 900/1494-5 (represented by mss. in Oxford and Cambridge, ed. F. Babinger, *Die frühosmanischen Jahrbucher des Urudsch. Quellenwerke des islamischen Schrifttums*, ii, Hanover 1925; *Nachtrag*, with amendments, 1926), and the second *ca.* 908/1502-3 (represented by mss. in Manisa, ed. N. Atsiz, *Oruç Beğ tarihi*, Istanbul 1972, and in Paris, unpubl.) (cf. V.L. Ménage, *On the recensions of Uruj's "History of the Ottomans"*, in *BSOAS*, xxx [1967], 314-22). Although Urudj's history was apparently little used by historians until the early 20th century, it is now recognised as a significant contribution to the corpus of early Ottoman histories (F.R. Unat, *İA* art. *Oruç b. ʿÂdil*).

Bibliography: Given in the text.

(Christine Woodhead)

ʿURWA b. **ḤIZĀM** b. Muhāṣir (or b. Mālik) al-ʿUdhrī, Arab poet of early Islamic times (d. around 30/650 or some decades later) and, alongside his younger fellow-tribesman Djamīl [*q.v.*], the most famous representative of the "ʿUdhrite" lovers, who died in consequence of a chaste and unrequited love affair.

According to the most widespread version of the story (cf. Ibn Ḳutayba, *Aghānī*, *Dīwān* of ʿUrwa, Ibn ʿAsākir, al-Sarrādj, and al-Anṭākī), ʿUrwa falls in love with his cousin ʿAfrāʾ. Though her father promised to marry her to ʿUrwa, he gives her in marriage to another cousin during ʿUrwa's absence. After ʿUrwa realises what happened, he falls ill and none of the healers consulted, among them the legendary ʿArrāf al-Yamāma (see ʿARRĀF; the verses quoted in this article are ʿUrwa's), can cure him. To restore ʿUrwa's health, he is brought to Syria, where ʿAfrāʾ now lives with her husband, in order to give him the opportunity to steel secret glances at her. ʿUrwa indeed recovers, but his secretly watching ʿAfrāʾ is betrayed to her husband, who, however, is full of sympathy for ʿUrwa and invites him to his house. ʿUrwa, instead, decides to leave ʿAfrāʾ for ever and to return home. On his way back, he is seized by lovesickness again, this time causing his death. Only a few days later, ʿAfrāʾ dies of grief beside ʿUrwa's grave.

Another version (cf. *Aghānī* and al-Ṣafadī) differs in many points and shows close parallels to the romance of al-Murakkish the Elder [*q.v.*]. In this we are told that the father of ʿAfrāʾ, after having married her to a rich member of the Umayyad clan, tries to deceive ʿUrwa by showing him a faked grave to make him

believe that ʿAfrāʾ is dead. Besides these traditions, many sources adduce an eyewitness account of ʿUrwa's death by al-Nuʿmān b. Bas̲h̲īr (*q.v.*, see also S. Leder, *Das Korpus al-Haiṭam ibn ʿAdī*, Frankfurt 1991, 104-10).

The story of ʿUrwa and ʿAfrāʾ was well known already in early Umayyad times, as references to ʿUrwa in poems by D̲j̲amīl, Kut̲h̲ayyir [*q.vv.*] and others show (cf. al-Was̲h̲s̲h̲āʾ, *al-Muwas̲h̲s̲h̲ā*, ed. Brünnow, 55-6, and I.J. Kračkovskiy, in *Oriens*, viii [1955], 33-5). Less conspicuous, however, are ʿUrwa's achievements as a poet. Originally, the main function of most verses ascribed to him (hardly more than 200 lines, all of the *g̲h̲azal* genre) may have been to illustrate ʿUrwa's love romance. The most famous of these poems, a *nūniyya* (rhyme *-ānī*) in the metre *ṭawīl*, gives the impression of being a compilation of shorter poems forming part of different episodes of the story, to which further lines with identical rhyme and metre have been added. Drawing on this stock, later authors compiled shorter versions of ʿUrwa's *nūniyya* to be included in anthologies and works of *adab*.

Bibliography: Main sources. Ibn Ḳutayba, *al-S̲h̲iʿr wa 'l-s̲h̲uʿarāʾ*, 394-9 = ed. S̲h̲ākir, ii, 622-7; Abu 'l-ʿAbbās T̲h̲aʿlab, *Mad̲j̲ālis*, ed. ʿA.M. Hārūn, ²Cairo 1965, i, 241-3; Ibn Dāwūd al-Iṣfahānī, *al-Zahra*, index; Masʿūdī, *Murūd̲j̲*, §§ 3044-7; *Ag̲h̲ānī*³, xxiv, 121-37; Abū ʿAlī al-Ḳālī, *D̲h̲ayl al-amālī wa 'l-nawādir*, 157-62; Sarrād̲j̲, *Maṣāriʿ al-ʿus̲h̲s̲h̲āḳ*, Beirut 1958, i, 316-21 and index; Ibn ʿAsākir, *Taʾrīk̲h̲ madīnat Dimas̲h̲ḳ*, ed. Muḥibb al-Dīn al-ʿAmrawī, Beirut 1996, xl, 217-26; Ṣafadī, *Wāfī*, xix, 542-5; Dāwūd al-Anṭākī, *Tazyīn al-aswāḳ*, Beirut 1972, i, 129-39; ʿAbd al-Ḳādir al-Bag̲h̲dādī, *K̲h̲izāna*, ed. Cairo, iii, 214-8. The *Dīwān* of ʿUrwa in the recension of al-Yazīdī (comprising the *nūniyya* and 15 lines of another poem in *ṭawīl*, rhyme *-bū*) was ed. by Ibrāhīm al-Sāmarrāʾī and Aḥmad Maṭlūb, *S̲h̲iʿr ʿUrwa b. Ḥizām*, in *Mad̲j̲allat Kulliyyat al-Ādāb*, iv (Bag̲h̲dād 1961), 77-116 (also separately). Further collection of ʿUrwa's poetry by Anṭwān Muḥsin al-Ḳawwāl, *Dīwān ʿUrwa b. Ḥizām*, Beirut 1995 (incomplete, add e.g. Abū ʿAlī al-Marzūḳī, *Amālī al-Marzūḳī*, ed. Yaḥyā al-D̲j̲ubūrī, 223-7). ʿURWA B. **MASʿŪD** B. MUʿATTIB AL-T̲H̲AḲAFĪ, Abū Yaʿfur, a leader of the Aḥlāf group in al-Ṭāʾif [*q.v.*] at the time of the rise of Islam and considered technically as a Companion of the Prophet, d. 9/630. He was descended through his mother from ʿAbd S̲h̲ams of Ḳuray̲s̲h̲ and married a daughter, Āmina or Maymūna, of the Meccan head of resistance against Muḥammad, Abū Sufyān [*q.v.*].

ʿUrwa took part in the negotiations between the Prophet and the Meccans for the truce of al-Ḥudaybiya [*q.v.*] in 6/628 as an ally of Ḳuray̲s̲h̲. When the men of al-Ṭāʾif, from both the component groups of the Aḥlāf and the Banū Mālik, joined the anti-Muslim coalition of the Hawāzin [*q.v.*] in S̲h̲awwāl 8/Jan.-Feb. 630 and fought with the Muslims at Ḥunayn [*q.v.*], ʿUrwa was absent in the Byzantine frontier town of D̲j̲aras̲h̲ [*q.v.*], learning about siege techniques in preparation for a Muslim siege of al-Ṭāʾif. On his return, he directed the defence of the town. However, in Rabīʿ I 9/June-July 630 he became a Muslim, but was killed during the siege by a group of his fellow-citizens. ʿUrwa may have hoped to secure good terms from Muḥammad for the surrender of his town, or he may possibly have hoped by submitting to secure a future political ascendancy in al-Ṭāʾif, so that his death may well have been simply part of local factional rivalry. At all events, later Muslim tradition made him a martyr for the faith, and Muḥammad is reported to have compared him to ʿĪsā b. Maryam.

ʿURWA B. **UD̲H̲AYNA** (a *laḳab*, his father's name being Yaḥyā), Abū ʿĀmir al-Kinānī al-Layt̲h̲ī, Arab poet from Medina (fl. later 1st/7th century into the early 2nd/8th century) famous for his love poetry (*g̲h̲azal*), but also billed as a traditionist and legal scholar; Mālik [*q.v.*] is said to have transmitted from him (Ibn Abī Ḥātim, *al-D̲j̲arḥ wa 'l-taʿdīl*, Ḥaydarābād 1360, iii/1, 396; al-Buk̲h̲ārī, *al-Taʾrīk̲h̲ al-kabīr*, Ḥaydarābād 1941-64, iv, 33; al-D̲h̲ahabī, *Mīzān al-iʿtidāl*, ed. ʿA.M. al-Bid̲j̲āwī, Cairo n.d., iii, 63 [*ṣadūḳ*], cf. also Ibn Ḳutayba, *S̲h̲iʿr*, 580 [*t̲h̲iḳa*]; he does appear once in Mālik, *al-Muwaṭṭaʾ*, *riwāyat al-S̲h̲aybānī*, ed. ʿA.-W. ʿAbd al-Laṭīf, Cairo 1387/1967, 262).

The only clear date of his life is Saturday, 3 Rabīʿ I 64/30 Oct. 683, the day he returned to Mecca to find that the Kaʿba had just burnt down (al-Ṭabarī, ii, 528 = *Taʾrīk̲h̲*, v, Cairo 1963, 498-9). He lived at least into the reign of the caliph His̲h̲ām (105-25/724-43) to whom he was sent as part of a delegation (Ibn Ḳutayba, *S̲h̲iʿr*, 579; *Ag̲h̲ānī*, xxi, 164). His tribal affiliation is with the Layt̲h̲ b. Bakr b. ʿAbd Manāt b. Kināna ... b. K̲h̲uzayma ... b. K̲h̲indif; all of these names, except Layt̲h̲, appear in his tribal *fak̲h̲r*. Since Kināna is the "mother tribe" of Ḳuray̲s̲h̲, though not through ʿAbd Manāt, he boasts of being one of them as well (see i, 33, viii, 34, x, 52-3, here with explicit defence of counting them among his "relatives"). This allows him to claim the Prophet as "one of us" (see i, 39, iv, 25, vii, 38, ix, 36-9, x, 57-8).

The fact that he combined the stature of a religious scholar, of alleged chastity and purity, with that of a love poet—not an entirely unusual combination at the time (see Nallino, 99-101)—occasioned a number of anecdotes in which his chaste heart is called into doubt. Oft-repeated is a story in which the famous Sukayna bt. al-Ḥusayn [*q.v.*] swears to let her slave-girls go free, if his best-known love poems were really written with an untouched heart (*ḳalb salīm*) (e.g. *Ag̲h̲ānī*, xxi, 164; al-S̲h̲arīf al-Murtaḍā, *Amālī*, i, 410).

Ibn al-Nadīm (*Fihrist*, ed. Flügel, 143, ll. 1-2) mentions a collection of his *ak̲h̲bār* by Ḥammād b. Isḥāḳ, grandson of Ibrāhīm al-Mawṣilī (d. 188/804 [*q.v.*]). Most of the material adduced in the *Ag̲h̲ānī* is, however, credited to al-Zubayr b. Bakkār (d. 256/870 [*q.v.*]).

His poetry was apparently not collected into a *dīwān*. What has been preserved is eleven complete *ḳaṣīda*s in the anthology *Muntahā al-ṭalab* of Ibn Maymūn (d. 597/1201) and some forty-five fragments from various sources, most characteristic among which are the lines set to music (*aṣwāt*) mentioned in the *Ag̲h̲ānī*. He was part of the Medinan scene of poets and musicians, whose collaboration was so close that the singer Ibn ʿĀʾis̲h̲a [*q.v.*, no. I] even asked ʿUrwa to compose, on the spot, some lines in *hazad̲j̲* for him that he might put them into song (*ḳul lī abyātᵃⁿ hazad̲j̲ᵃⁿ ug̲h̲annī fīhā*, see *Ag̲h̲ānī*, xxi, 166). While this kind of poetry belongs to the new Ḥid̲j̲āzī *g̲h̲azal*, with its description of the beloved amidst her maiden friends (no. liv) and with its sophisticated psychology of the

lover and the beloved (no. xlii), the long odes show him closer to the old models of poetry. And yet, the *nasīb* sections, exceptionally long at times (forty lines in no. x), contain both old and new elements side by side, at times resulting in slightly contradictory attitudes (x, 5: the "old" it's-all-over notion; x, 21: the "new" motif of the calumniators calling the beloved miserly; they may be lying, so there may be hope).

In the last part of the *ḳaṣīdas* tribal *fakhr* is predominant. Of interest here are the religious-political notions mentioned mostly in connection with the Prophet: the Sunna of the Prophet (i, 39); the "vicegerency of a dominion" (? *khilāfat^a mulk^in*) that his people inherited from the Prophet (x, 57); the "counselling" (*shūrā*) that they have as a privilege (iv, 29); the "true prescriptions" (*sharā'i'^u ḥaḳḳ^in*) that become clear through their protection of Islam (ix, 15).

Bibliography: 1. A collection of his poetry was undertaken by Yaḥyā al-Djubūrī, *Shi'r 'Urwa b. Udhayna*, Baghdād n.d. [1390/1970]; the more recent anonymous ed. Beirut 1996 is worthless, as it does not go beyond al-Djubūrī and leaves out the indication of the sources.

(W.P. Heinrichs)

'URWA B. AL-WARD, pre-Islamic *ṣu'lūk* [*q.v.*] poet, from the 'Abd Allāh b. Nāshib family, from a clan of 'Abs (Ibn al-Kalbī, *Djamhara*, Beirut 1968, 452). His mother, though purely Arab, seems to have attracted attacks from his contemporaries, as shown by 'Urwa himself, who says that his family called him Ibn al-Gharība "son of the stranger", and elsewhere he reproaches his father for a *mésalliance*.

Two groups of divergent traditions present an ambivalent portrait of the poet: on the one hand, he is a *ṣu'lūk*, and on the other, he is the hero of a moving love story.

As a *ṣu'lūk*, 'Urwa was not one of the outcasts, *aghribat al-'Arab* "ravens of the Arabs", nor was he one of the *khula'ā'* "outlaws", expelled from his tribe to a life of brigandage. On the contrary, he seems to have enjoyed a certain standing amongst the 'Abs, taking part in their raids and sharing in the captured booty (*Aghānī*[3], iii, 78-82). The various traditions stress his sollicitude for poor and needy members of the tribe, the *ahl al-kanīf* (cf. *Dīwān*, ed. Nöldeke, no. V, vv. 1-3, no. VII, vv. 1-5, no. XI, vv. 1-3, no. XXXI, v. 8), and this led to him being considered as the most generous of the ancient Arabs, even more than Ḥātim al-Ṭā'ī [*q.v.*] (*Aghānī*, iii, 74). These raids took place in the districts near the *diyār* of the 'Abs, sc. around Medina (*ibid.*, iii, 79), though he raided as far as the lands of the Banu 'l-Ḳayn and Hudhayl and Dhu 'l-Madjāz (*ibid.*, iii, 82-3, 87). He seems to have had contacts with the people of Yathrib, since the Banu 'l-Naḍīr purchased from him the booty which he had captured and lent him resources during periods of dearth (*ibid.*, iii, 76).

Parallel to this, a series of traditions from the 2nd/8th century present the outlaw poet as hero of a romance of tragic love, when, in a state of drunkenness, he divorced his wife Salmā (or Laylā, according to other traditions), and then fell into despair on recovering his senses, evoking his old love in poignant poetry (Nöldeke, 7-9). Hence the 'Abbāsid poet Marwān b. Sulaymān, of the Abū Ḥafṣa family (d. 182/797), places him with al-Muraḳḳish [*q.v.*] amongst the martyrs for love (al-Mubarrad, *Kāmil*, i, 416).

'Urwa is undoubtedly the most prolific of the *ṣu'lūk* poets. Of the two recensions of his *dīwān*, that of Ibn al-Sikkīt [*q.v.*] has come down to us. It has been edited by Nöldeke, *Die Gedichte des Urwa ibn Alward*, in *Abh. KGW Göttingen*, xi (1864), and Muh. Ben Cheneb, Algiers 1926. It seems to have excited the interest of *udabā'* of the 3rd-4th/9th-10th centuries. 'Urwa's *dīwān* comprised the *ṣu'lūk*'s apologia, love poetry and tribal poetry. Except for the cycle of poems concerning Salmā, his poetry appears fairly insipid. His evident boastfulness verges on conceit and on occasion serves to embody the ideas of those *ṣa'ālīk* who did not reject the tribal order. Thus the sense of solitude, of the outlaw alone with nature, and a tumultuous spirit in his poetry, are conspicuously absent in 'Urwa, although he seems to have possessed a sharp sense of the poetic image, evident e.g. in the poem describing the division of his own body amongst numerous other bodies in order to feed his guests (*Dīwān*, ed. Nöldeke, n. XI, v. 3).

(A. Arazi)

'URWA B. AL-ZUBAYR B. AL-'AWWĀM al-Ḳurashī al-Asadī al-Madanī, Abū 'Abd Allāh, eminent traditionist, one of the Seven Jurists of Medina [see FUḲAHĀ' AL-MADĪNA AL-SAB'A, in Suppl.], founder of historical study in Islam. He was born in Medina, very likely in 23/643-4 and died there, probably in 93/711-2 or 94/712-13. He was the son of the eminent Companion al-Zubayr b. al-'Awwām [*q.v.*] and of Asmā' [*q.v.*], daughter of the first caliph Abū Bakr

and sister of the Prophet's wife, ʿĀʾis̲h̲a. The counter-caliph ʿAbd Allāh b. al-Zubayr [*q.v.*], his full brother, was his senior by twenty years.

The following attempt to sketch ʿUrwa's biography is made while bearing in mind that, as with other persons of the 1st century A.H., we have no contemporary reports about him but only traditions preserved by later generations. In such cases, the biographer has not only to weigh contradictory individual traditions but also to subject the tradition *in toto* to a general critique. In what follows it is presupposed that the existing sources, in spite of contradictions and distorted and falsified individual transmissions that they may contain, give us on the whole a widely correct picture of ʿUrwa's life and scholarly activities.

1. *ʿUrwa's life*

ʿUrwa grew up in Medina in the contentious atmosphere of the caliphate of ʿUt̲h̲mān. After the murder of ʿUt̲h̲mān and ʿAlī's election as caliph (35/656), his father al-Zubayr fled to Mecca where he presumably also took his two sons. Later, ʿUrwa and his father relocated to Baṣra, where the latter, with the help of Ṭalḥa b. ʿUbayd Allāh [*q.v.*] and ʿĀʾis̲h̲a, organised the rebellion against ʿAlī that later became famous as the Battle of the Camel (36/656). Due to his tender age ʿUrwa was not allowed to participate in the battle (Ibn Saʿd, v, 133). After his father's death he seems to have returned to Medina in the company of ʿĀʾis̲h̲a.

The considerable wealth inherited from his father enabled ʿUrwa to devote ample time to the collection and subsequent study of historical reports. When exactly he embarked on these activities, we do not know; however, during the last years of Muʿāwiya's caliphate (i.e towards 60/680), he is said to have met every night with some friends in the mosque of Medina in a scholarly circle (*ḥalḳa*) (al-D̲h̲ahabī, *Siyar*, iv, 424). But according to another report, his last visit to his aunt ʿĀʾis̲h̲a, his most important informant, took place three years before her death (58/678), that is 55/675 (*ibid.*). This report suggests that, at that time, ʿUrwa no longer lived in Medina. (Presumably, he was already in Mecca, see below.) Whether, and if so when, he spent seven years in Egypt, as al-Balād̲h̲urī reports (*Futūḥ*, 217), is highly doubtful, since the other transmitted data do not tally with this report. At any rate, he cannot have spent seven continuous years there at any time (cf. von Stülpnagel, *ʿUrwa*, 13).

During the counter-caliphate of his brother ʿAbd Allāh, ʿUrwa took his side. On the day of the battle of the Ḥarra (63/683 [*q.v.*]) he is said to have burned his legal writings (*kutub fiḳh*), an act that he is said to have deeply regretted later on (Ibn Saʿd, v, 133). In 69/688 ʿAbd Allāh sent ʿUrwa on an unsuccessful diplomatic mission to the ʿAlid Muḥammad b. al-Ḥanafiyya [*q.v.*] (Ibn Saʿd v, 77-8). According to al-Masʿūdī (*Murūd̲j̲*, v, 261-2 = § 2024), ʿUrwa also played a diplomatic role during the siege of Mecca by ʿAbd al-Malik's general, al-Ḥad̲j̲d̲j̲ād̲j̲ b. Yūsuf in 73/692, but ʿAbd Allāh, instigated by his mother Asmāʾ, refused to surrender and accept in that case the offer of *amān* made to him. On ʿAbd Allāh's death (73/692), ʿUrwa fled first to Medina, where he deposited his possessions, and then without pause to Damascus, bringing ʿAbd al-Malik the news of his victory, before even al-Ḥad̲j̲d̲j̲ād̲j̲'s messengers could arrive. The caliph treated ʿUrwa with respect, pardoned him and guaranteed the safety of his personal possessions. ʿUrwa is said to have returned to Mecca to attend the funeral of his brother (al-Balād̲h̲urī, *Ansāb*, xi, 61 ff.; al-Fasawī, i, 553-4; al-D̲h̲ahabī, *Siyar*, iv, 432-3).

ʿUrwa, now head of the Zubayrid family, settled again in Medina. This was for him the beginning of a long period of scholarly activity, and also the time of his correspondence with ʿAbd al-Malik who asked him for information on important events of the early days of Islam (see below), a correspondence continued by his son and successor al-Walīd (86-96/705-15). In the year of al-Walīd's *bayʿa* ʿUrwa, with his two sons Muḥammad and His̲h̲ām, went to Damascus. During this stay in the capital one of his feet, afflicted by gangrene or cancer (*ikla, akila*), was amputated, and during the journey Muḥammad lost his life due to an accident (al-Fasawī, i, 553-4; al-D̲h̲ahabī, *Siyar*, iv, 430-2).

In 87/706, ʿUmar b. ʿAbd al-ʿAzīz [*q.v.*], later to become the caliph ʿUmar II, arrived in Medina as the new governor. He is said to have appointed ten *fuḳahāʾ*, among them ʿUrwa and five more from among the Seven Jurists of Medina, to be members of a council to advise him on all matters, presumably first and foremost with regard to decisions on legal questions (Ibn Saʿd, v, 245-6). ʿUrwa died on his estate near the village of al-Furʿ in the settlement of al-Rabad̲h̲a [*q.v.*], some 200 km/125 miles east of Medina, where he was also buried (Ibn Saʿd, v, 135; al-D̲h̲ahabī, *Siyar*, iv, 431, 436).

2. *ʿUrwa's position within indigenous* Ḥadīt̲h̲ *criticism—his importance as traditionist and as "historian" in the history of Islamic scholarship*

In the entire indigenous *Ḥadīt̲h̲* critical literature ʿUrwa is considered a trustworthy transmitter; his piety finds high praise, and he is characterised as an inexhaustible sea of knowledge. European scholarship, already early on, saw in him the "father of the historical school of Medina" (thus O. Loth, *Das Classenbuch des Ibn Saʿd*, Leipzig 1869, 43). To judge by the corpus of traditions transmitted under his name (see below on its authenticity), ʿUrwa reported on all important events of early Islam; we owe to his activities as a collector above all the transmissions that are of central importance for the life of the Prophet (*Sīra* and *Mag̲h̲āzī*) and which still today serve as highly significant starting points for any historical study (cf. von Stülpnagel, 54). However, ʿUrwa was not only an "historian"; another group of traditions going under his name is legal in content. They deal *inter alia* with property laws, the laws of marriage and divorce, and the position of women and slaves; others contain ritual precepts and general rules of behaviour (concerning ablution, prayer, pilgrimage; precepts concerning the behaviour towards the dead and tombs, and the wearing of precious garments). In these *ḥadīt̲h̲*s, explanations of Ḳurʾānic passages are frequently encountered; others contain derivations or applications of the *sunna* of Medina (cf. von Stülpnagel, 54 ff.). With his thesaurus of transmissions, ʿUrwa "laid the foundation for the entire early Islamic attitude toward life" (*ibid.*, 22).

ʿUrwa, being a (late) *tābiʿī* or Successor, belongs to the first generation of scholars in Islam who systematically collected traditions. His *isnād*s do not always fulfil the later requirements; at times, he does not mention his authority at all. Two-thirds of the traditions in the ʿUrwa corpus go back to ʿĀʾis̲h̲a as his direct informant; however, in some cases the suspicion is warranted that the *isnād* was extended backwards to ʿĀʾis̲h̲a in the later course of transmission (cf. von Stülpnagel, 119).

3. *Written and oral transmission. ʿUrwa's letters*

ʿUrwa wrote down the *ḥadīt̲h̲*s collected by him, at least in part. He is said to have destroyed all his

kutub fiḳh (see above). According to one version of this report, the reason for this is said to have been his qualms not to create another book alongside the Ḳur'ān (al-Dhahabī, *Siyar*, iv, 436). Also in favour of written notes is the fact that 'Urwa already used to present his legal traditions arranged according to subject-matter (al-Fasawī, i, 551). However, such writings can only have had the status of aide-mémoires (*hypomnēmata*) for oral lectures which were the normal vehicle for the transmission of knowledge in this early age. It is out of the question that 'Urwa wrote a *K. al-Maghāzī* in the sense of a definitively edited book (*syngramma*), as rather late sources allege (Ibn Kathīr; Ḥādjdjī Khalīfa). Things are different with the *rasā'il* (letters) [see RISĀLA] of 'Urwa (cf. on these von Stülpnagel, 61-113). The *risāla* [*q.v.*] was the only literary form in this early age by means of which scholarly knowledge was handed on.

There is no reason to doubt the authenticity of the *rasā'il* transmitted in 'Urwa's name by al-Ṭabarī and Ibn Hishām. It is true that changes of the original text cannot be excluded, which might have occurred during the transmission of the letters in teaching situations. The letters, dealing as they do with the emigration to Abyssinia, the first and the second Meccan *Fitna*, the Hidjra, Badr, the Hidjra of the women, the conquest of Mecca, the battle of Ḥunayn, the struggle for al-Ṭā'if, the calumniation of 'Ā'isha, and so on, may be considered the beginning of Islamic historiography.

4. *The authenticity of the 'Urwa corpus*

Likewise, the corpus of traditions transmitted under 'Urwa's name, as they are adduced in a great number of *ḥadīth* collections (*inter alia* the *Muṣannaf* works by 'Abd al-Razzāḳ and Ibn Abī Shayba, the *Ṣaḥīḥs* of al-Bukhārī and Muslim, Ibn Ḥanbal's *Musnad*), legal works (e.g. Mālik b. Anas's *Muwaṭṭa'*), historical works (*inter alia* Ibn Isḥāḳ-Ibn Hishām, al-Ṭabarī, al-Balādhurī) and Ḳur'ān exegetical works (e.g. al-Ṭabarī's *Tafsīr*), must be considered largely as genuine, i.e. in fact going back to 'Urwa. In the exhaustive source-critical study of the corpus by von Stülpnagel (1956), almost 2,000 traditions going under the name of 'Urwa were examined; these were found to be reducible to 315 basic traditions. (Since so many new *ḥadīth* collections and other relevant works have come to light in recent decades, a new investigation would probably increase this number.) According to von Stülpnagel, more than two-thirds of these basic traditions can be considered as genuine, whereas about fifty of them should be regarded as spurious, falsified, or distorted beyond recognition (cf. 55, 147). A test of authenticity is possible, especially in those cases in which an individual 'Urwa tradition was handed on by both his main transmitters, his son Hishām and his greatest disciple Ibn Shihāb al-Zuhrī [*q.v.*]; this is actually true for a large part of the traditions in the corpus. A comparison of the *mutūn* (texts [see MATN]) of the same tradition in both transmissions, which frequently differ considerably in their length and their choice of words, leads one more often than not to the conclusion that (1) the two texts were indeed transmitted independently of each other, and (2) they are indeed derived from a common source, namely 'Urwa (cf. Schoeler, *Charakter und Authentie*, 20-1, 150-1). 'Urwa's original version can hardly ever be reconstructed in its exact wording, but the outlines of its content are certainly reconstructible. It should be noted that the complete corpus of 'Urwa's traditions must have been larger than the extant material, and that his historical traditions in their original form were as a rule rather long and devoid of any (absolute) dates. In the sources available to us, especially the *ḥadīth* works, they often appear disjointed and/or abridged. Absolute dates are almost always later insertions (cf. von Stülpnagel, 35-6, 60).

As for the trustworthiness of the historical information on which 'Urwa himself could lay his hands, it should be stressed, with R. Paret (*Die Lücke in der Überlieferung über den Urislam*, in *Westöstliche Abhandlungen, R. Tschudi zum siebzigsten Geburtstag*, ed. F. Meier, Wiesbaden 1954, 147-53, see 151) that, as son of one of the first followers of the Prophet and as close friend of the latter's widow 'Ā'isha, he was, if only indirectly, in close contact with the historical period of Muḥammad. He may have at times received, and handed on, traditions that were distorted due to memory lapses or biased or bordering on the legendary, but hardly traditions that were invented or consciously falsified. According to von Stülpnagel (149), the 'Urwa corpus is also practically devoid of any patent inventions and falsifications by 'Urwa himself, nor does it contain explicit legal or theological polemics. The main outlines of the life of the Prophet, at least from the Hidjra onwards, are thus likely to be correct in the way that 'Urwa has drawn them, who thus bequeathed them to later Islamic historiography and from there to modern biographies of the Prophet.

Bibliography: 1. Sources. On 'Urwa's life, see the sources assembled by Sezgin, *GAS*, i, 278, the most important one being Ibn Sa'd, v, 132-5; also Abū Yūsuf Ya'ḳūb b. Sufyān al-Fasawī, *K. al-Ma'rifa wa 'l-ta'rīkh*, ed. A.Ḍ. al-'Umarī, 3 vols. [2]Beirut 1981, i, 550-4; Ibn Ḥibbān al-Bustī, *K. al-Thiḳāt*, ed. M. 'Abd al-Mu'īd Khān *et alii*, 9 vols. Ḥaydarābād 1973-83, v, 194-5; Dhahabī, *Siyar a'lām al-nubalā'*, ed. Sh. al-Arnā'ūṭ *et alii*, 23 vols. [3]Beirut 1985, iv, 421-37 (a list of further sources at 421 n.); Ibn 'Asākir, *Ta'rīkh madīnat Dimashḳ*, facs. ed. of Ẓāhiriyya ms., 17 vols. Amman n.d. [*ca.* 1988], xi, 559-86 (the two last-named works contain the most extensive biographies of 'Urwa). Certain events in 'Urwa's life are also mentioned in historical works, e.g. Balādhurī, *Ansāb al-ashrāf*, xi, ed. Ahlwardt, *Anonyme arabische Chronik*, Greifswald 1883, 61-3, and index.

2. Studies. See *GAS* and add F. Wüstenfeld, *Die Familie el-Zubeir*, Göttingen 1878, no 63; J. Fück, *Muḥammad Ibn Isḥāq. Literarhistorische Untersuchungen*, diss. Frankfurt 1925, 7-8; A.A. Duri, *The rise of historical writing among the Arabs*, ed. and tr. L.I. Conrad, Princeton 1983, 76-95 (including, at 79-90, a catalogue of historical 'Urwa traditions); and above all the exhaustive dissertation by J. von Stülpnagel, *'Urwa Ibn az-Zubair. Sein Leben und seine Bedeutung als Quelle frühislamischer Überlieferung*, Tübingen 1957, unpubl. typescript, inc. at 37-53, a catalogue of all passages known to the author in which 'Urwa traditions are adduced, and at 61-83, 'Urwa's letters in a complete German translation.

On the question of written and oral transmission and of the authenticity of the 'Urwa corpus, see G. Schoeler, *Charakter und Authentie der muslimischen Überlieferung über das Leben Mohammeds*, Berlin and New York 1996, 28-32, 145-54. 'Urwa's letters can be found in Ṭabarī, *Tafsīr*, ii, 163 ult. ff. (an excerpt in idem, *Ta'rīkh*, i, 1180-1), ix, 151-2, xviii, 61, xxviii, 4-5; idem, *Ta'rīkh*, i, 1224-5, 1234-7, 1284-8, 1634-6, 1654-5, 1669-70, 1770, iii, 2458 (= Ibn Sa'd, *Ṭabaḳāt*, viii, 103); Ibn Hishām, *Sīra*, ed. Wüstenfeld, 754-5; Wāḳidī, *K. al-Maghāzī*, ed. Jones, ii, 631; Ibn Sa'd, *Ṭabaḳāt*, viii, 6-7. Translations of the majority of these letters can be found in L. Caetani, *Annali*, i-ii. For compilations

of ʿUrwa traditions, see *GAS* and add ʿUrwa b. al-Zubayr, *Maghāzī rasūl Allāh bi-riwāyat Abi ʾl-Aswad ʿanhu*, coll. and ed. URYŪLA, the modern Orihuela, a town of the eastern part of al-Andalus, the highly fertile region of the Levante [see sharḳ al-andalus]. The modern town is 20 km/13 miles to the northeast of Murcia; it comes within the province of Alicante and is the seat of a bishopric. In 1970 it had a population of 45,000.

The town is an ancient one, and was the Roman Orecelis. It was conquered by the Muslims at the same time as other towns of what became the *kūra* of Tudmīr [*q.v.*], and appears to have been originally the chef-lieu of Tudmīr, the place where the eponymous Visigothic governor Theodemir had lived. In the early 3rd/9th century, however, the newly-founded town of Murcia became the provincial capital [see mursiya]. Thereafter, the history of Uryūla was essentially that of Mursiya as long as the latter remained in Muslim hands, i.e. until the mid-7th/13th century. In the mid-3rd/9th century, the Norsemen had ravaged the coasts of Murcia and had penetrated up the Rio Segura to Uryūla [see al-madjūs, at Vol. V, 1119a]. For a brief period in the mid-6th/12th century, Uryūla was the chef-lieu of a petty principality ruled by the *ḳāḍī* Aḥmad b. ʿAbd al-Raḥmān b. ʿAlī b. ʿĀṣim.

USĀMA b. **MUNḲIDH** [see munḳidh, banū].

USĀMA b. **ZAYD** b. Ḥāritha al-Kalbī al-Hāshimī, Abū Muḥammad, son of the Abyssinian freedwoman Baraka Umm Ayman and reckoned among the Prophet's freedmen, was born in Mecca in the fourth year of Muḥammad's mission. Tradition records many instances of the Prophet's fondness for him as a child, and gives him the surname of Ḥibb b. Ḥibb Rasūl Allāh.

He joined the fighters on the way to Uḥud [*q.v.*], but was sent back before battle on account of his tender age. Questioned by Muḥammad in the case of slander against ʿĀʾisha, he spoke in her favour. After Khaybar he received a stipend, and in 8/630 rode behind the Prophet into Mecca and entered the Kaʿba with him. He fought gallantly at Ḥunayn [*q.v.*].

In 11/632 Muḥammad put Usāma in command of an expedition to avenge his father Zayd, fallen at Muʾta [*q.v.*]. Notwithstanding criticism, due to Usāma's youth, the Prophet, already in his last illness, insisted on a prompt departure, but the expedition turned back at the news of his death, and Usāma was among those who prepared him for burial.

The newly-elected caliph Abū Bakr ordered the expedition to be resumed, in accordance with the Prophet's wishes, though the tribes were already in revolt. Usāma reached the region of al-Balḳāʾ in Syria, where Zayd had fallen, and raided the village of Ubna (the modern Khān al-Zayt). His victory brought joy to Medina, depressed by news of the *ridda*, thus acquiring an importance out of proportion to its real significance, which caused it later to be regarded as the beginning of a campaign for the conquest of Syria. In the same year, Abū Bakr left Usāma in command at Medina, whilst away at the battle of Dhu ʾl-Ḳaṣṣa.

In 20/641, ʿUmar bestowed on him a stipend of 4,000 dirhams, equal to that of the men of Badr, on account of the Prophet's fondness for him and his father. The election of ʿUthmān to the caliphate took place in the home of Fāṭima bt. Ḳays al-Fihriyya, Usāma's wife; he probably had a part in the event, and was in favour with the caliph, receiving from him the grant of a piece of land, and being sent by him to Baṣra in 34/654-5 to report upon the political situation there. After ʿUthmān's death, Usāma refused homage to ʿAlī, whose supporters attacked and ill-treated him in the Mosque at Medina. Thereafter, he lived in retirement, first in Wādī ʾl-Ḳurā, then in Medina; he died in al-Djurf in *ca.* 54/674 and was buried in Medina.

Usāma has a place among transmitters of *ḥadīth*. His political career, though not brilliant, appears blameless; we hear nothing of his riches.

In appearance, Usāma resembled his mother, being black and flat-nosed. The emphasis laid by tradition on Muḥammad's love for him is partly due to the intention of setting him off against ʿAlī's family; it may also have been meant to show that the Prophet was a true democrat and free from colour prejudice.

al-**ʿUṢBA** al-**ANDALUSIYYA** [see al-mahdjar].

ʿUṢFŪRIDS, a minor dynasty of mediaeval Arabia in the al-Aḥsā/al-Ḥasā [*q.v.*] and al-Baḥrayn [*q.v.*] areas of eastern Arabia. Their rule began there in 651/1253 after their seizure of the region from the ʿUyūnids [*q.v.*]. The ʿUṣfūr were kings of Banū ʿĀmir b. ʿAwf b. Mālik, a *baṭn* of ʿUḳayl, in the 7th/13th century, whilst their subjects included the Banū Thaʿlaba. Little appears to be known of their history. In the mid-9th/15th century, a branch of the ʿUṣfūrids called the Djabrids assumed control of al-Aḥsā.

Bibliography: Ibn Khaldūn, *ʿIbar*, vi, 12; Caskel and Strenziok, *Ǧamharat an-Nasab. Das genealogische Werk des Hišām ibn Muḥammad al-Kalbī*, Leiden 1966, i, table 102; ʿUmar Riḍā Kaḥḥāla, *Muʿdjam ḳabāʾil al-ʿArab*, ii, Beirut 1982, 711, 785. (G.R. Smith)

ʿUSHĀḲ, a town of western Anatolia, in modern Turkey Uşak (lat. 38° 42′ N., long. 29° 25′ E., altitude 907 m/2,976 feet).

1. History. In Antiquity, the town came within the empire of the Hittites, and the ruins of classical Flaviopolis are nearby. In the 8th/14th century it came within the *beylik* of the Germiyān-Oghullari̊ [*q.v.*]. The only extant *waḳfiyye* of this period, dated

721/1321, concerns the foundation of a *zāwiye* there by Yaʿḳūb I (Mustafa Çetin Varlık, *Germiyan-oğulları tarihi* (*1300-1429*), Ankara 1974, 43, 107), and the still-extant Ulu Cami is undated but goes back to this time (Mahmut Akok, *Uşak Ulu Camii*, in *Vakıflar Dergisi*, iii [1956], 69-72, with plates and plans). Under the Ottomans, ʿUshāḳ came within the *sandjak* of Kütāhya [*q.v.*], and by 937/1530 was the centre of a *ḳaḍā*; at this time it had eleven *maḥalles* and a population of 493 adult males. It had a soap manufactory which paid a tax of four *akčes* and a bar of soap for every soap-kettle in use. The name ʿUshāḳ was around this time equated in the popular mind with the word *ʿushshāḳ* "lovers", so that Ewliyā Čelebi interpreted the town's name as *ʿāshîḳlar beldesi*. Towards the end of the 18th century it was under a *derebey*, Ḥādjdjī Murādoghlu, who rebelled against the central government but was overthrown and executed. Near the end of the 19th century, Cuinet numbered the population of the town at just over 13,000, of whom about one-third were Greeks and Armenians (*La Turquie d'Asie*, iv, Paris 1894, 215-19). The *sāl-nāme* of 1324/1906 for the Khudāwendigār *wilāyet* numbered the town's carpet looms at 1,532, with 6,928 persons involved in the work, and 300 dye houses. There was fierce fighting in the area during the Greco-Turkish War, and it was there that the Greek commander-in-chief General Trikoupis was captured on 2 September 1922. It is now on the main road and railway line connecting İzmir with Ankara, and is the chef-lieu of an *il* or province. In 1997 the town had a population of 124,356 and the *il* one of 311,754.

2. ʿUshāḳ carpets. The 10th/16th-century records contain no mention of knotted rugs from the town. Presumably not all rugs called "ʿUshāḳ" in modern carpet parlance were made in the town itself, and only those recorded in Ottoman documents as coming from or named after the town can be specifically attributed to it. ʿUshāḳ carpets are remarkable because they show the transition from purely abstract design to the elaborate scrollwork esteemed by wealthy Ottoman customers during the 10th-11th/16th-17th centuries. The sources mentioning the town's fame for rug manufacture mostly date from the 11th/17th century. A price list of 1050/1640 refers to a multitude of larger and smaller ʿUshāḳ carpets priced according to size (Mübahat Kütükoğlu, *Osmanlılarda narh müessesi ve 1640 tarihli narh defteri*, Istanbul 1983, 71-2, 178). Some information on design is also available in this list: almost all of the carpets described as coming from ʿUshāḳ possessed a red ground and several of them had a design called *ṣofra* in the centre; this would seem to indicate the medallion ʿUshāḳ of modern terminology. In addition, the nearby settlement of Selendi was credited with a white-grounded *ḥammām* rug with a "crow" design, which probably corresponded to the well-known white-grounded ʿUshāḳ with a decoration of stylised scrolls resembling birds.

Ewliyā Čelebi, who visited ʿUshāḳ in 1082/1671-2, refers to this small but active commercial town as a centre of the wool trade, where camels and wagons were numerous enough to cause traffic jams. Both mosque and *dīwān-khāne* rugs in vibrant colours were manufactured here, while the nearby village of Boyalî grew a root from which the red dye used in rug-making was manufactured (*Seyāḥat-nāme*, ix, 38-40). He also referred to the distribution of ʿUshāḳ rugs. Thus the market held on the *yayla* of Djebel Erbaʿīn (Bozdağ) in the vicinity of modern Ödemiş was visited by the people of ʿUshāḳ and Ḳula, the latter also a rug-making centre, and it is likely that rugs and carpets were brought along for sale. Ewliyā also noted that a large ʿUshāḳ rug decorated the Armenian monastery of Jerusalem, a building which much impressed him for its handsomeness. Kātib Čelebi's *Djihān-nümā* (Istanbul, 1145/1732, 768) equally mentions that the prayer rugs (*sedjdjāde*) and carpets of ʿUshāḳ were famous.

Termini ante quem for the dating of ʿUshāḳ rugs (in the art-historical sense of the term have often been provided by Dutch paintings (Onno Ydema, *Carpets and their datings in Netherlandish paintings 1540-1700*, Woodbridge, Suffolk 1991, 39-50).

The *sherʿiyye sidjilleri*, not only of ʿUshāḳ itself but also of other rug-making centres such as Güre or Ḳula, have not been preserved. But the presence of ʿUshāḳ rugs as far afield as Istanbul and Jerusalem indicates that this industry possessed a well-developed distribution network. In Erdel [*q.v.*] or Transylvania, numerous rugs/carpets have been found in churches which are considered by specialists to have come from ʿUshāḳ; but there is no definite information on where they were made (Ferenc Batari, *Ottoman Turkish carpets*, Budapest 1994, 28-40).

After 1870, a growing market for rugs in Europe and the United States resulted in the expansion of carpet-knotting in ʿUshāḳ. Merchants collected the rugs produced domestically by women knotters, while the dyeing of yarn was often a job for men. Looms were generally the property of the producers. Artificial dyes were introduced, but their use for a long time was restricted to the lower-quality rugs, and spinning remained largely a manual job until the turn of the century. However, in the years before 1900, ʿUshāḳ rug-makers began to feel the competition from towns where wages were lower and also from the first spinning and dyeing factories. In March 1908 women demolished an ʿUshāḳ factory, and the local authorities, acting in the context of the incipient Young Turkish Revolution, advised the central government to give in to the workwomen's demands. However, by the beginning of World War I, the use of machine-spun yarn in carpet manufacture had become an established custom in ʿUshāḳ (D. Quataert, *Machine breaking and the changing carpet industry of Western Anatolia, 1860-1909*, in idem (ed.), *Workers, peasants and economic change in the Ottoman Empire, 1730-1914*, Istanbul 1993, 117-36). Demand for Uşak carpets further receded during the two World Wars, with kilim manufacture providing only a partial substitute for this loss. Today, the town's main industry consists of a sugar refinery, established in 1925 and producing 43,900 tons p.a. in 1982.

Bibliography (in addition to references in the article): *İA*, art. *Uşak* (Besim Darkot); *Yurt ansiklopedisi*, Istanbul 1982, art. s.v. (SURAIYA FAROQHI)

(AL-)**USHBŪNA**, Lisbon, now the capital of Portugal. Originally it bore the Punic name Olisippo. Ruled successively by Romans, Alans and Visigoths, it was conquered by the Arabs in early 97/716. For the transcription of the name in Arabic sources, we find *Ushbūna*, *al-Ushbūna* and *Lashbūna*.

Initially, Lisbon formed part of the province or *kūra* of Beja, but along with Santarem and Sintra, later constituted the separate province of Balāṭa. In 229/844, it was attacked by bands of Norsemen (*al-Madjūs* [*q.v.*]), probably from Ireland. The *amīr* of Cordova ʿAbd al-Raḥmān II received a letter from the governor of Lisbon stating that 54 Norse galleys had anchored off the city. The raiders indulged in 13 days of murder and pillage, and fierce encounters (*malāḥim*) took place between them and the Muslims before the raiders left for southern Spain. Another attack by Norsemen on Lisbon in 355/966 was repulsed.

Arab geographers describe Lisbon as a fine city, extending along the Tagus, with a strong castle and a wall with five gates, and containing warm springs (*ḥamma*, hence today's Alfama). They speak at length of Lisbon's rich natural resources. Al-Rāzī pays tribute to the abundance of fish, and to its honey and gold as well as the excellent amber from the ocean. Ibn Ghālib [*q.v.*] says that Lisbon was renowned for the quality of its fruit and the variety of its game and fish. Al-Idrīsī, who visited Lisbon shortly before its capture by the Portuguese, says that south of the Tagus, facing Lisbon, lies al-Maʿdan (Almada), so called on account of the gold dust (*tibr*) washed up on the bank of the river; he also quotes the people of Lisbon as saying that in the plain of Balāṭa, between Lisbon and Santarem, wheat is harvested 40 days after being sown, with "each measure sown yielding about 100 measures". He further noted that a group of adventurers (*al-mugharrirūn*) set out from Lisbon on a voyage of discovery to find out what the ocean contained and how far it extended, and eleven days after they had set out from Lisbon, they reached a sea with huge waves and thick clouds (probably the coast of Ireland or England). Realising their peril, they changed direction and, after 24 days' sailing, reached an island (probably one of the Canaries), whose ruler had them deported to the coast of Morocco, where they learnt that they were at a distance of two months journey from Lisbon.

Sābūr, a freedman of the caliph al-Ḥakam II, was governor of Gharb al-Andalus, including Lisbon, until the collapse of the Cordova caliphate when, like other founders of Taifas [see MULŪK AL-ṬAWĀʾIF. 2], he proclaimed his independence. On Sābūr's death in 412/1022, one of his confidants, ʿAbd Allāh b. al-Afṭas, assumed guardianship of Sābūr's two minor sons and later supplanted them as ruler of Badajoz. The two brothers moved to Lisbon for a month until, at the request of the people of Lisbon, Ibn al-Afṭas appointed a new governor. Returning to Seville from a raid in León in 425/1034, Ismāʿīl b. ʿAbbād, eldest son of the ruler of Seville, was ambushed by Ibn al-Afṭas and narrowly escaped to Lisbon. This would seem to indicate that Lisbon was then part of the dominions of the ʿAbbādids of Seville, as was nearby Beja, birthplace of al-Muʿtamid b. ʿAbbād (434/1042 [*q.v.*]).

Lisbon boasted a number of native poets, of whom no less than seventeen are cited in the *Dhakhīra* of Ibn Bassām of Santarem (d. 542/1147 [*q.v.*]). These include Ibn Maḳānā, Ibn Suwār and ʿAlī b. Ismāʿīl al-Fihrī. Ibn Bassām used to come to Lisbon from Santarem in order to meet prominent men of letters visiting the city, such as Ibn Dūdīn of Valencia, who in 477/1084 dictated to the anthologist some of his verse and prose (*Dhakhīra*, iii/2, 703).

Having removed the Taifa rulers of Granada, Almeria and Seville, the incoming Almoravids proceeded to depose Ibn al-Afṭas of Badajoz for collusion with Alfonso VI of Castile and León; he had ceded Lisbon, Santarem and Sintra to Alfonso VI in 486/1093 in return for promising aid should Badajoz be attacked. Alfonso VI, however, failed to help and Ibn al-Afṭas was executed by the Almoravids in Muḥarram 486/February 1093. A few months later, the Almoravids recovered Lisbon after it had been under Castilian occupation for nearly one year and a half.

The subsequent rise of the Almohads in Morocco and the withdrawal, in consequence, of most of the Almoravid garrisons from al-Andalus offered the Christian rulers in the peninsula a propitious opportunity to expand their territories at Muslim expense. Two years after assuming the royal title in 533/1139, Afonso Henriques, first king of Portugal, who is referred to in Arabic sources as Ibn al-Rīḳ/al-Rink, i.e. the son of Henrique, failed in an attempt to seize Lisbon, but his capture of Santarem on 10 Shawwāl 541/15 March 1147, opened the road to Lisbon. A few months later, a Crusader fleet, on its way to Palestine and comprising 164 vessels and some 13,000 men from Germany, Flanders and England, arrived at Oporto. The bishop of Oporto persuaded the Crusaders to aid the king of Portugal in an assault on Lisbon, promising them booty and ransom money in return.

A full eyewitness account of the siege of Lisbon by an Anglo-Norman priest has survived in a unique ms. now preserved at Corpus Christi College, Cambridge. From the account, Lisbon would seem to have been at that time an autonomous city-state run by a council comprising the governor, the *ḳāḍī*, the Mozarabic bishop and a number of elders. The English, attacking from the west, gained access to the subterranean grainstores. The Germans, attacking from the east, blew a breach in the wall, but the defenders vigorously repulsed all attempts to penetrate the city. Eventually, an 80-foot mobile tower, constructed by the English, won the day. Although a truce arranged with Afonso Henriques provided for the peaceful evacuation of the city, it was nonetheless sacked by the Crusaders and many of its citizens, including the Mozarabic bishop, were slain, after falling on 27 Djumādā I 542/24 October 1147 after a siege of seventeen weeks.

Surprisingly, surviving Arabic sources have very little to add to the Anglo-Norman priest's account. Ibn Ghālib merely says that the Christian attackers numbered 13,000 men and that very few of the inhabitants of Lisbon survived the assault. Ibn Diḥya (d. 633/1235) says that "Confronted by large hosts who arrived by land and sea and given the failure of Muslims to come to their aid and the casualties they had suffered, the defenders of Ushbūna eventually capitulated" (*Muṭrib*, 24). Lisbon's great mosque was promptly converted into a church (now Lisbon's cathedral) and an English priest, Gilbert of Hastings, was installed by Afonso Henriques as first bishop of the new see.

In the annals of the *Reconquista*, the conquest of Lisbon was as important as that of Toledo (478/1085) and Saragossa (512/1118). Like Toledo, it now became a strategic Christian frontier stronghold. Its capture, perhaps the greatest single achievement of Afonso Henriques, was probably a decisive event in the creation of the Kingdom of Portugal.

AL-ŪSHĪ, 'ALĪ B. 'UTHMĀN b. Muḥammad b. Sulaymān, Sirādj al-Dīn al-Taymī al-Faraghānī, Ḥanafī scholar from Ūsh in Farghāna of the 6th/12th century. Nothing is known about his life. The death date of 575/1179-80, mentioned in one place by Ḥādjdjī Khalīfa, may be a mere guess. According to his own testimony, he completed his *al-Fatāwā al-Sirādjiyya* in Ūsh on 2 Muḥarram 569/13 August 1173. The epithet *Imām al-Ḥaramayn* given to him suggests that he taught for some time in Mecca and Medina.

Al-Ūshī is best known for his *lāmiyya*, theological poem of 66 or 68 lines also called *Bad' al-amālī* and *Kaṣīdat Yakūlu 'l-'Abd*. It contains a simple creed in the Ḥanafī tradition close to Māturīdī doctrine and seems influenced by the *'Akā'id* of Abū Ḥafṣ al-Nasafī [*q.v.*]. The Mu'tazila are explicitly condemned, while criticism of Ash'arī doctrine is muted. The reality of miracles worked by Ṣūfī saints is upheld, but prophets are ranked in excellence above saints. Among the numerous commentaries written on the poem, that of 'Alī al-Ḳārī al-Harawī (d. 1014/1605) is particularly popular. In his *Ghurar al-akhbār wa-durar al-ash'ār* al-Ūshī gathered traditions and poetry, mostly of a paraenetic character, from rare sources, arranging them in chapters according to subject matter. Only an abridged version entitled *Niṣāb al-akhbār wa-tadhkirat al-akhyār*, containing 1,000 short traditions in 100 chapters, is extant. His *al-Fatāwā al-Sirādjiyya*, a collection of his Ḥanafī legal opinions, is described by Yūsuf b. Abī Sa'īd al-Sidjistānī as dealing with many rare cases not found in other books. Al-Sidjistānī relied on it as one of his two primary sources in his massive *Munyat al-muftī* completed in Sīwās in 639/1240.

AL-USHMŪNAYN, a town of Upper Egypt [see AL-ṢA'ĪD] situated on the west bank of the Nile between that river and the Baḥr Yūsuf, on lat. 27° 47' N.

This town is the ancient Hermopolis Magna, in Coptic Shmoun, Egyptian Khmounou. Coptic-Arabic legend attributes its foundation to an eponym, Ushmūn, son of Miṣr. The dual form of the name, found in early Arab times, indicates that there were two settlements, and in the papyri of the 1st and 2nd centuries A.H. there appear Ushmūn al-'Ulyā and U. al-Suflā "Upper" and "Lower" Ushmūn.

In Antiquity it was the capital of a district, hence in Arab times al-Ushmūnayn was the chef-lieu of a *kūra*. Al-Kindī noted that there was a *wālī ḥarb* there, apparently the same official as the *wālī al-ḥarb* of the Ṣa'īd, who according to Ibn Duḳmāḳ resided there. After al-Ushmūnayn was sacked in 415/1024, there was appointed an official with the title of *mutawallī ḥimāyat balad al-Ushmūnayn wa-a'mālihā*. With the administrative reorganisation of the Fāṭimid vizier Badr al-Djamālī [*q.v.*] and the division of Egypt into provinces, al-Ushmūnayn became the chef-lieu of a province between those of al-Bahnasā and Manfalūṭ. At the time of the land-survey in 713/1313 of al-Nāṣir Muḥammad b. Ḳalāwūn, *al-rawk al-nāṣirī* [see RAWK], the town of Ṭahā had risen in importance, since the province is named as that of al-Ushmūnayn and al-Ṭahāwiyya. Over the course of time, al-Ushmūnayn declined in importance to the profit of Ṭahā in al-Bahnasā. In *ca.* 1132/1720, under the Ottoman governor Muḥammad Nishāndjī Pasha, the nearby place Mallawī became the administrative centre, thanks to its closeness to the Nile. In 1241/1826 the name of the province of al-Ushmūnayn was changed to the *ma'mūriyya* of Asyūṭ, with the latter town as chef-lieu, and al-Ushmūnayn became a simple village of the *markaz* of Mallawī in that province.

In mediaeval times, al-Ushmūnayn was famed for its fertility. From sheep reared by local Arab tribesmen, the town became an important centre of the woollen industry, with red wool carpets on the model of the *ḳirmiz* ones of Armenia, and the clothing of al-Ushmūnayn was widely exported.

USHNŪ (Ushnuh, Ushnūya), a district and small town of Ādharbāydjān. The modern town, known as Ushnuwiyya (Oshnoviyeh), situated in lat. 37° 03' N., long. 45° 05' E., is some 56 km/35 miles south of Urmiya [*q.v.*], on which it has usually been administratively dependent. It is at present the chef-lieu of a *bakhsh* in the *shahrastān* of Urmiya. The present population (1991 census results) is 23,875.

The district of Ushnū is watered by the upper course of the river Gādir (Gader) which, after traversing the district of Sulduz [*q.v.*], flows into Lake Urmiya on the south-west. To the south of Ushnū is the district of Lāhidjān which is administered from Sawdj-Bulaḳ [*q.v.*]. The town of Ushnū is situated on the left bank of the Gādir.

The population of the district are Kurds. The town and its villages are occupied by the Zarzā tribe, the other twenty-five villages by the tribe of Mamash, which also occupies a part of Lāhidjān and of Sulduz.

The town of Ushnū is mentioned in Arabic sources from the time of al-Iṣṭakhrī (186). This author says that Ushnuh al-Ādhariyya formed part of the lands of the Banū Rudaynī, which also included Dākharkān and Tabrīz (Nirīz ?), but Ibn Hawḳal, 240, already notes that this tribe had disappeared. At 239, he notes the richness of Ushnuh in grass and fruits. Its produce (honey, almonds, nuts and cattle) was exported to Mawṣil and to al-Djazīra. Its "steppe" (*bādiya* = Lāhidjān ?) belonged to the Hadhbānī Kurds who spent the summer there (*yaṣīfūn*). The principal fief of these Kurds was at Irbil [*q.v.*].

We know nothing of the coming of the Zarzā Kurds to Ushnū (they may perhaps be a branch of the old Hadhbānī) but the Zarzarī are already mentioned in the *Masālik al-abṣār* of Ibn Faḍl Allāh al-'Umarī, writ-

ten in Egypt in 1335 (cf. *NE*, xiii, Paris 1838, 300-29). The author explains its name as *walad al-dhiʾb*, which Quatremère emended to *walad al-dhahab* "children of gold" (in Kurdish *zär* + *zārū*).

In the *Sharaf-nāma* of Sharaf al-Dīn Bidlīsī, the section on the Zarzā, mentioned in the preface, is omitted in all the manuscripts. They must have occupied a very considerable area. In a mutilated passage, i, 280, Sharaf al-Dīn seems to say that Lāhidjān was taken from the Zarzā by Pīr Budaḳ, the first chief of the Bābān tribe (9th/15th century). He also mentions (i, 278) the defeat inflicted on them by Sulaymān Beg Sohrān (in the time of the Ottoman Sultan Murād III, 982-1003/1574-95).

Ushnū lies on the road between Mawṣil and the valley of Lake Urmiya (Mawṣil-Rawānduz-pass of Kela-Shīn [*ca.* 10,000 feet]—Ushnu—Urmiya or Marāgha). This road, blocked by snow in winter, is much less convenient than the route from Rawānduz via Rāyāt by the pass of Garū-Shinka (south of the Kela-Shīn), which does not exceed 7,800 feet. The pass of Kela-Shīn (in Kurdish, "green stele") is celebrated for the stele with a bilingual inscription (Assyrian-Urartian) erected in 800 B.C. in the time of the Urartian King Ishpuini and his son Menua. The *Masālik al-abṣār* (tr. Quatremère, 315) has a detailed account of the mountain of Ḥadjarayn, i.e. "the Two Stones" (i.e. the Kela-Shīn and the similar stone of Topuzāwa, to the south-west of Kela-Shīn). In the legendary account by al-Ṭabarī, i, 440, of the campaigns of the King of Yaman (Rāʾish b. Ḳays) in the region of Mawṣil, we are told that his general Shawr b. al-ʿAttāf had his exploits engraved on "the two stones (*ḥadjarayn*) still known in Ādharbāydjān".

The place-names of the district (in Aramaic Ashnokh, Ashna, cf. the Asna of *Ḥudūd al-ʿālam*, tr. Minorsky, 142) reflect the former presence of a Christian element which has now disappeared (cf. the names of the villages of Sargis, Dinḥā and Bemzurta). In 958 already, a Christian of Ushnū founded the church of Sergius and Bacchus near Malaṭya. In 1271 the Nestorian Catholicos Denḥā transferred the see of the metropolis of Assyria to Ushnū so that it might be better protected by the Mongol rulers (Assemani, ii, 350, 456). An old Christian church may be concealed by the ruins of Dayr-i Shaykh Ibrāhīm (near Singān), which are venerated by both Muslims and Christians. Rawlinson (17) saw there the tomb of the bishop of Ushnū, Ibrāhīm, who in 1281 was present at the consecration of the Nestorian Catholicos Yahballāhā III.

(V. MINORSKY*)

ʿUSHR (A., pls. *aʿshār* or *ʿushūr*), the tenth or the tithe in Islamic law. The early *fiḳh* works define *ʿushr* as a tax on the land owned by Muslims, or a tax on the commercial goods to be paid by Muslim, *dhimmī*, or *ḥarbī* merchants from non-Muslim countries (*dār al-ḥarb*). It has been regarded as a kind of *zakāt* [*q.v.*], and frequently used also in the sense of *ṣadaḳa* [*q.v.*]. The term *ʿushr* is not found in the Ḳurʾān, but the phrase "the due portion (*ḥaḳḳ*) to be given on the day of its harvesting", in sūra VI, 141, is consistently taken to refer to the tithe or half-tithe levied on fruit and grain (Abū Yūsuf, 56; Yaḥyā b. Ādam, 121-2).

In the ancient Near East, the offering or payment of a tenth of one's goods or property to the deity and king was widely practised from Mesopotamia, Syria-Palestine and Greece to lands as far west as Carthage. In Judaism, the tithe also helped the community to meet the needs of Levites, resident aliens, orphans and widows. However, in the early Christian era, although it became a means of livelihood for church leaders, the tithe was regarded as a practice not necessarily in harmony with the new Christian movement (*The Encyclopedia of Religion*, s.v. Tithe). As to the custom in ancient South Arabia, Pliny in the 1st century recorded that a tithe of frankincense was taken by the priests for the god they called Sabis (*Natural history*, xii, 32/63). The inscriptions found also in South Arabia show that *ʿshr* and *ʿshwrt* (pl.) were tithes levied on land as offerings to the temples during several centuries after the Christian era. It has been repeatedly argued that the temple tithe was a hidden form of state taxation in the Southern Arabian kingdoms. However, all the evidence indicates that the tithe at that time was really not a state tax but a voluntary oblation to the deity (A.V. Korotayev, *Pre-Islamic Yemen*, Wiesbaden 1996, 60-84). During the Djāhiliyya period, the Arabs in and around Mecca and Medina were accustomed to offering a part of their crops and cattle to both Allāh and "pagan" gods (Ḳurʾān, VI, 136).

Based on existing customs prevalent among these Arabs, Muḥammad probably laid down the *ʿushr* as a kind of tax for his newly-established community. According to Tradition, Muḥammad said, "On what is irrigated by rain and perennial streams lies *ʿushr*, and on what is irrigated artificially [lies] half the *ʿushr*" (al-Bukhārī, *Ṣaḥīḥ*, *zakāt*, 55); "Take from a Muslim *ʿushr*, and from a polytheist *kharādj*" (Ibn Mādja, *Sunan*, *zakāt*, 22); "If you have palm-trees, pay *ʿushūr*" (Ibn Ḥanbal, *Musnad*, iv, 236); and "*ʿushūr* are levied on Jews and Christians, not on Muslims" (Abū Dāwūd, *Sunan*, *imāra*, 33/55). However, since the term was not yet strictly defined, it is also said that the Prophet indicated *kharādj* not *ʿushūr* in the last-mentioned tradition (*ibid.*). Furthermore, Ibn Saʿd recorded a different tradition in which the Prophet implied *djizya* by the term *ʿushūr* (vi, 59).

Based on the brief accounts of the Ḳurʾān and these traditions, Muslim scholars during the ensuing centuries tried to develop the law on *ʿushr* for the benefit of their community. Abū Yūsuf (d. 182/798), a follower of Abū Ḥanīfa, formed his tax theory on the principle that any land whose owner, Arab or non-Arab, became a Muslim should be considered *ʿushr* land, while lands taken over from non-Arabs and left in their possession should be categorised as *kharādj* land (69; *Taxation in Islam*, iii, 82). Moreover, no-one should have the right to convert *kharādj* land into *ʿushr* land or *vice-versa* (Abū Yūsuf, 86; *Taxation in Islam*, iii, 83). Therefore, no changes could be introduced concerning the lands of al-Ḥidjāz, Mecca, Medina, Yemen and the lands of the Arabs conquered by the Prophet, which were *ʿushr* land (Abū Yūsuf, 58; *Taxation in Islam*, iii, 73). Yaḥyā b. Ādam (d. 203/818), who emphasised tradition, thought that *ʿushr* was *ṣadaḳa*, which was the *zakāt* [*q.v.*] levied on the crops and fruits of Muslims (no. 356; *Taxation in Islam*, i, 77). However, he was of the opinion that when a man embraced Islam on the condition that he continue to pay *kharādj*, the tax would be due on his land without change (Yaḥyā b. Ādam, no. 22; *Taxation in Islam*,

i, 26). Abū ʿUbayd Ibn Sallām (d. 224/838), who was independent of any school of law, argued that no tax should be levied on honey from *kharādj* land because neither *ʿushr* nor *kharādj* is doubly levied on the same land (*K. al-Amwāl*, no. 1499). According to this view, the tradition that "*ʿushūr* is not levied on Muslims" indicates that *ʿushr* is not levied on Muslims without just basis. He who collects *ʿushūr* without just basis in the name of *ṣadaḳa* is a *maks* [*q.v.*] collector to be burned in hell (*K. al-Amwāl*, nos. 1639-41, 1625). Al-Māwardī (d. 450/1058), a later Shāfiʿī scholar, prescribes more precisely that the rate of *zakāt* is the *ʿushr* levied on dates, grapes, and ten kinds of crops, like wheat, barley, rice, sorghum and chick peas. He introduces also two different views concerning the cultivation of *kharādj* land by a Muslim: according to al-Shāfiʿī, *ʿushr* is levied in addition to *kharādj*, but according to Abū Ḥanīfa, *ʿushr* is not to be levied (*al-Aḥkām al-sulṭāniyya*, 118-19).

These legal discussions were based on the assumption that the lands conquered by the Arabs had been classified into *kharādj* and *ʿushr* lands according to the method of conquest, by force or by treaty. However, ʿUmar II in reality still held the principle that *ʿushr* was levied on land owned by Muslims, and *kharādj* (*djizya* in the Umayyad fiscal administration) on land owned by *dhimmīs*. The view that *kharādj* and *ʿushr* lands existed from the beginning was newly invented after the reign of ʿUmar II (Shimada, *Shoki isurāmu kokka*, 174, 192). As stated above, al-Shāfiʿī recognised that both *kharādj* and *ʿushr* were levied on any Muslim who cultivated *kharādj* land, while Ibn Sallām and Abū Ḥanīfa rejected the levying of both taxes on the same land. The new, latter principle came to be commonly adopted in later Islamic taxation law (Shimada, *op. cit.*, 175). This indicates that an additional tax of *ʿushr* was in principle not imposed on newly-converted Muslims in place of poll-tax exemption. Soon after his accession to the throne, ʿUmar II sent an order to provincial governors stating, "As for *ʿushūr*, we consider that they should be abolished except from the owners of ploughland" (Ibn ʿAbd al-Ḥakam, *Sīrat ʿUmar*, 82; Gibb, *Fiscal rescript*, 6). According to Gibb, "In this document Umar II accepted the practice existing in his time whereby certain lands were assessed for *ʿushr* (*op. cit.*, 12). Forand mistakenly explains that the abusive *ʿushūr* in this case were illegal imposts (*Notes on ʿUšr*, 140). Shimada regards *ʿushūr* themselves as not abusive (al-Balādhurī, *Futūḥ*, 77), and presents the view that, in his document, ʿUmar II ordered the abolition of *ʿushūr*, that is, a 10% tax on *dhimmī* merchants, intending to treat Arab Muslims and *dhimmī* converts as equals (Shimada, 196).

During the early Islamic period, *ʿushr* was to be levied on the following persons: (1) Muslim cultivators who owned *ʿushr* land. If the land was irrigated by running water or by rain, they paid 10% of their produce in kind; but if the land was irrigated artificially, half of that rate was required. (2) Muslim merchants and artisans, who paid 2½% of their annual earnings. (3) *Dhimmī* merchants and artisans, who paid 5% of their annual earnings. (4) *Ḥarbī* merchants from non-Muslim countries, who paid 10% of the value of their merchandise (Forand, *op. cit.*, 137). However, *dhimmī* merchants actually paid 10% of their annual earnings until the time when ʿUmar II ordered *ʿushūr* abolished, with the exception of the owners of ploughland. In 7th century ʿIrāḳ, the actual tax rate was proportional to the yield: in the Sawād of Kūfa, native converts or Muslims who acquired land from native landlords continued to pay *kharādj*, whilst in the Sawād of Baṣra, Muslims who acquired land by gift or sale, or reclaimed land privately, paid *ʿushr* until the time of al-Ḥadjdjādj, who ordered such land owners to pay *kharādj* (Morony, *Iraq*, 106). In the *thughūr* [*q.v.*] lands bordering the Byzantine empire, all tax exemptions from *ʿushr* were abolished during the reign of al-Mutawakkil; and for Muslim proprietors, the *ʿushr* assessment meant their elimination from the ruling class (al-Balādhurī, *Futūḥ*, 171; von Sivers, *Tax and trade in the ʿAbbāsid Thughūr*, in *JESHO*, xxv [1982], 83-4). The Arab Muslims who had emigrated to Egypt stopped paying *ʿushr* and started paying *kharādj* during the reign of al-Mahdī (Morimoto, *The fiscal administration*, 184). During the early ʿAbbāsid period, the owners of *ḳaṭīʿa* and *ḍayʿa* [*q.vv.*] lands still retained the right to pay only *ʿushr* on their private property (*milk*), but there was a tendency to deprive them of this privilege (Løkkegaard, *Islamic taxation*, 91; al-Dūrī, *Taʾrīkh al-ʿIrāḳ*, 186).

When the Būyid *amīr* Muʿizz al-Dawla implemented the *iḳṭāʿ* [*q.v.*] system in the Sawād in 334/946, he granted to his followers confiscated property (*ḍayʿa*) and revenue in the state treasury (*ḥaḳḳ bayt al-māl*) from levies on the private estates of influential farmers (Miskawayh, *Tadjārib al-umam*, ii, 96; Sato, *State and rural society*, 21). These levies were also called *ḥaḳḳ al-aʿshār* (Hilāl al-Ṣābiʾ, *Tuḥfat al-umarāʾ fī taʾrīkh al-wuzarāʾ*, 363), which demonstrates the existence of a common view that *ʿushr* rather than *kharādj* was still to be levied on the private estates of farmers during that period. However, under the *iḳṭāʿ* system, influential village proprietors (*tānī*) who owned small plots of land (*ḍayʿa*) in the Sawād surrendered their estates to *iḳṭāʿ* holders in order to survive under their protection (Sato, *op. cit.*, 33-7). Generally speaking, Arabic and Persian society under the new régime experienced almost the same change in their taxation systems, as the distinction between *kharādj* and *ʿushr* lands gradually disappeared (Johansen, *The Islamic law*, 80-1) [see also KHARĀDJ], and peasants began paying *kharādj* as well as miscellaneous taxes (*mukūs* [see MAKS]) to their *iḳṭāʿ* holders, except for the poll tax which was paid to the state treasury (Sato, 148-50). However, during the Ayyūbid and Mamlūk periods *ʿushr* as *zakāt* in addition to *kharādj* was levied on Egyptian and Syrian peasants contrary to Islamic law (Ibn Mammātī, *Ḳawānīn al-dawāwīn*, 313; al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, xiii, 117; al-Nuwayrī, *Nihāyat al-arab*, viii, 252, 259; Cahen, *Makhzūmiyyāt*, 34, 44). Regarding taxation on commercial goods, Muslim merchants under the *iḳṭāʿ* system paid about 2½% of the value of their merchandise (*Ṣubḥ al-aʿshā*, iii, 457; S.D. Goitein, *A Mediterranean society*, i, Berkeley and Los Angeles 1967, 270-1), while *ḥarbī* merchants who came to Alexandria, Damietta, Tinnīs or ʿAydhāb paid *khums* [*q.v.* in Suppl.] (a fifth), which actually ranged from 20 to 35% of the value of what they were carrying (Ibn Mammātī, 325-7; S. Labib, *Handelsgeschichte Ägyptens im Spätmittelalter*, Wiesbaden 1965, 199-200). According to Ibn Djubayr (d. 614/1217), all the goods belonging to Muslims arriving in Alexandria were brought into the government office, subjected to severe investigation, and then *zakāt* (probably a half or fourth of *ʿushr*) was levied on them (*Riḥla*, 13-14).

In Anatolia and the Balkans under Ottoman rule, cavalrymen (*sipāhī*) resided in villages that were their *tīmār* [*q.v.*] and were able to collect *ʿöshür* (actually ⅛ to ⅓ of the peasant harvest) levied on crops and paid in kind (H. Inalcık, *The Ottoman empire*, London 1973, 107; idem and D. Quataert, *An economic and social history of the Ottoman empire*, Cambridge 1994, 113, 531).

In Persia under the Il-Khāns and the Ṣafawids, privately-owned land (*milk*), although small in scale, still remained, and *ʿushr* was levied on its owners (*Camb. hist. Iran*, v, 517-8, vi, 517). In Ottoman Syria also, *ʿushr* was levied on orchards, vegetable gardens, and all *wakf* land except in sacred cities like Mecca, Medina and Jerusalem (A. Cohen and B. Lewis, *Population and revenue in the towns of Palestine*, Princeton 1978, 65, 131, 142, 151; M.A. Bakhit, *The Ottoman province of Damascus*, Beirut 1982, 147-8). This custom, in the course of time, gave privileged Circassians and local notables in Egypt the opportunity to achieve large-scale landownership through the accumulation of *ʿushūriyya* land granted by Muḥammad ʿAlī (K.M. Cuno, *The Pasha's peasants*, Cambridge 1992, 180).

Bibliography: 1. Sources. Legal descriptions of *ʿushr* and *kharādj* in the early Islamic period may be found in the following: Abū Yūsuf, *K. al-Kharādj*, Cairo 1962; Yaḥyā b. Ādam, *K. al-Kharādj*, Cairo 1964; Abū ʿUbayd, *K. al-Amwāl*, ed. Muḥammad Kh. Harrās, Cairo 1968; Māwardī, *al-Aḥkām al-sulṭāniyya*, Cairo 1966. The first two important works have been translated by A. Ben Shemesh as *Taxation in Islam*, i, Leiden 1958; ii, 1969 with free arrangement of the text. Al-Māwardī's *al-Aḥkām* was recently translated into English by Wafaa H. Wahba as *The ordinances of government*, Reading 1996, following the French tr. by Fagnan, *Traité des statuts gouvernementaux*, Algiers 1915. For further study of *ʿushr* in history, see the historical works of Balādhurī, *Futūḥ al-buldān*; al-Ṭabarī, *Taʾrīkh*; Miskawayh, *Tadjārib*; Ibn Mammātī, *Ḳawānīn al-dawāwīn*; and Nuwayrī, *Nihāyat al-arab*.

2. Studies. C.H. Becker, *Die Entstehung von ʿUšr- und Ḫarāǧ-Land in Ägypten*, in *ZA* (1904), 301-19, also in *Islamstudien*, i, 218-33; F. Lokkegaard, *Islamic taxation in the classic period*, Copenhagen 1950 (important for his careful treatment of legal sources). Concerning the fiscal rescript of ʿUmar II, one pioneering and two critical studies have appeared: H.A.R. Gibb, *The fiscal rescript of ʿUmar II*, in *Arabica*, ii (1955), 1-16; P.G. Forand, *Notes on ʿUšr and Maks*, in *Arabica*, xiii (1966), 137-41; and J. Shimada, *Shoki isurāmu kokka no kenkyu*, Tokyo 1996 (a very comprehensive work differentiating historical fact from legal opinion). *Kharādj* and *ʿushr* in early fiscal administration have been studied by D.C. Dennett, *Conversion and poll tax in early Islam*, Cambridge, Mass. 1950; K. Morimoto, *The fiscal administration of Egypt in the early Islamic period*, Kyoto 1975; M.G. Morony, *Iraq after the Muslim conquest*, Princeton 1984; and J.B. Simonsen, *Studies in the genesis and early development of the caliphal taxation system*, Copenhagen 1988. Concerning *ʿushr* under the *iḳṭāʿ* system, see the following: ʿA.ʿA. al-Dūrī, *Taʾrīkh al-ʿIrāḳ al-iḳtiṣādī fi ʾl-ḳarn al-rābiʿ al-hidjrī*, Beirut 1974; Cl. Cahen, *Makhzūmiyyāt*, Leiden 1977; B. Johansen, *The Islamic law on land tax and rent*, London 1988; T. Sato, *The state and rural society in medieval Islam*, Leiden 1997.

(T. Sato)

ʿUSHSHĀḲĪ-ZĀDE, a Turkish patronymic whose first element is formed from a learned Arabisation of the *nisba* Ushākī "pertaining to [the town in western Anatolia of] Ushāḳ". It was the name of two families of Ottoman Turkey.

1. The first is the family of leading *ʿulamāʾ*, descendants of Ḥasan Ḥusām al-Dīn ʿUshshāḳī (d. 1001/1592-3), founder of the ʿUshshāḳiyya branch of the Khalwatiyya [*q.vv.*] Ṣūfī order. Ḥasan had three sons: Muṣṭafā (d. *ca.* 1037/1628), who succeeded his father as head of the order's *tekke* in the Ḳāsîmpasha quarter of Istanbul, whilst serving as *ḳāḍī* of the capital and *ḳāḍī ʿasker* of Anatolia; ʿAbd al-ʿAzīz (d. 1045/1635), *ḳāḍī* of Aleppo; and ʿAbd al-Raḥīm (d. 1087/1676-7), *ḳāḍī* of Üsküdār. In the next generation, the *tekke* passed into the hands of another branch of the family, Muṣṭafā having no male descendants, but two ʿUshshāḳī-zādes were still *ʿulamāʾ* of high rank: Faṣīḥī Meḥmed (d. 1065/1654), *ḳāḍī* of Jerusalem, and ʿAbd al-Bāḳī (d. 1090/1679), *ḳāḍī* of Mecca. This last married the daughter of a *naḳīb al-ashrāf*, hence his progeny acquired the additional dignity of *sayyid* status. It was from this branch that there issued the most distinguished members of the family in the next generation: Sayyid ʿAbd Allāh Nasīb (d. 1139/1726), *ḳāḍī ʿasker* of Rumelia, and Sayyid Ibrāhīm Ḥāsib (d. 1136/1724), *ḳāḍī* of Izmir. The latter is especially known for his writings, notably his *Dhayl-i Shaḳāʾiḳ* (or *Dhayl-i ʿAṭāʾī*), a continuation of ʿAṭāʾī's biographical work (*Ḥadāʾiḳ al-ḥaḳāʾiḳ fī takmilat al-Shaḳāʾiḳ*), itself a continuation of Ṭashköprüzāde's *al-Shaḳāʾiḳ al-Nuʿmāniyya* (in it he completed the *ṭabaḳa* of the *ʿulamāʾ* and *shaykh*s of Murād IV's time and added four other *ṭabaḳāt* covering persons up to the reign of Aḥmed II). He also wrote a history, the *Tārīkh-i ʿUshshāḳī-zāde*.

2. The second is that of merchants and notables who settled in Izmir at the end of the 19th century, and from whom there arose the novelist Khālid Ḍiyāʾ (Halit Ziya) [*q.v.*] and also Laṭīfe Khānîm, for a time wife of Kemāl Atatürk.

(Nathalie Clayer)

ʿUSHSHĀḲĪ-ZĀDE, Ibrāhīm b. al-Seyyid ʿAbd ül-Bāḳī (1075-1136/1664-1724), Ottoman scholar and biographer.

He stemmed from a prominent family of *ʿulemāʾ*: his father was *ḳāḍī* of Mecca, his maternal grandfather was *naḳīb ül-eshrāf* and his younger brother ʿAbdullāh (d. 1139/1726-7 became *ḳāḍī-ʿasker* of Rūmeli. Ibrāhīm followed a middle-ranking career as a *müderris*, later rising to the posts of *ḳāḍī* of Medina (1119/1707) and of Izmir (1125-6/1713-14). He died in Istanbul and was buried at the Keskin Dede cemetery near the Mosque of Nishāndjî Pasha (Sālim, *Tedhkere*, Istanbul 1315/1897, 218-20; cf. Ali Uğur, *The Ottoman ʿulema in the mid-17th century. An analysis of the Vaḳāʾiʿ ul-fuẓulā of Meḥmed Şeyhī Efendi*, Berlin 1986, pp. xiii-xxi).

ʿUshshāḳī-zāde's *Dheyl-i Sheḳāʾiḳ-i nuʿmāniyye* is a biographical dictionary of 11th/17th-century Ottoman *ʿulemāʾ* compiled at the request of the Sheykh ül-Islām Feyḍullāh (d. 1115/1703) as a continuation of the work of ʿAṭāʾī [*q.v.*]. Arranged in five *ṭabaḳāt*, it covers the period from 1043/1633 in the reign of Murād IV (where ʿAṭāʾī finishes) through the reigns of Ibrāhīm, Meḥemmed IV, Süleymān II and Aḥmed II to 1106/1694-5 (entries listed in A.S. Levend, *Türk edebiyati tarihi*, Ankara 1973, 358-60). A facsimile ed. was published by H.J. Kissling as *ʿUšāqīzāde's Lebensbeschreibungen berühmter Gelehrter und Gottesmänner des osmanischen Reiches im 17. Jahrhundert (Ẓeyl-i šaqāʾiq)*, Wiesbaden 1965. The work was completed in 1114/1702 but only formally presented later to Čorlu ʿAlī Pasha [*q.v.*], Grand Vizier 1118-22/1706-10. It was used as a source by the author's contemporary Meḥmed Sheykhī

(1078-1144/1667-1732), whose *Weḳā'iʿ ül-fuḍalā'* was also compiled as a *dheyl* to ʿAṭā'ī. Although Sheykhī criticised ʿUshshāḳī-zāde's work as inadequate, with entries neither as systematic nor as numerous as his own, it was nevertheless a valuable source for his work (cf. Uğur, *op. cit.*, pp. xx-xxi) and remains a standard biographical reference work.

ʿUshshāḳī-zāde also wrote verse, using the *makhlaṣ* of Ḥasīb.

Bibliography: Given in the article.

(CHRISTINE WOODHEAD)

ʿUSHSHĀḲIYYA, a Ṣūfī order of the Ottoman empire arising out of the Khalwatiyya [*q.v.*] and developing within the empire from the last quarter of the 10th/16th century.

Its founder, Ḥasan Ḥusām al-Dīn ʿUshshāḳī, son of a merchant from Bukhārā, came to Anatolia as the result of a dream. At Erzindjān [*q.v.*], in eastern Anatolia, he received the *idjāza* of the Khalwatī *shaykh* Aḥmad Samarḳandī before he settled at Ushāḳ in western Anatolia. There he began to direct his devotees in his own Ṣūfī path, which apparently combined elements of the three *ṭuruḳ* to which he himself was affiliated, sc. the Khalwatiyya, Kubrawiyya and Nūrbakhshiyya (according to certain sources, he is reported also to have received an *idjāza* from Ümmī Sinān, *pīr* of the Sināniyya, another branch of the Khalwatiyya). Legend holds that he announced to the future Murād III (then residing at Manisa) his future greatness, so that the latter invited the *shaykh* to Istanbul after his accession in 982/1574. Certainly, after a certain lapse of time, Ḥusām al-Dīn settled in the Ḳāsîmpasha quarter, where a *tekke* was built, until the mid-18th century the only ʿUshshāḳī one in the capital. He was buried there, having died at Konya in 1001/1592-3 on his return from the Pilgrimage. Concerning his order's diffusion at this time, we know that it spread into Rumelia (in particular, to Edirne, Keshan, Gümüldjine/Komotini, Gelibolu, Filibe/Plovdiv, Belgrade, Buda, Pečuy/Peć, Temeshvar and Ḳandiye/Candia in Crete). We do not yet know about its spread within Anatolia. As for the Arab provinces, the sole reference is Ewliyā Čelebi's mentioning its existence in Cairo during the second half of the 17th century.

The ʿUshshāḳiyya enjoyed a renaissance in the 12th/18th century, when several new branches evolved. The most important one, the Djamāliyya, was founded at Istanbul by Meḥmed Djamāl al-Dīn ʿUshshāḳī (d. 1164/1751), considered as the *pīr-i thānī* or second master of the order. Originally from Edirne, he was an affiliate of the Gülshaniyya-Sezā'iyya (which influenced him strongly), the Sünbüliyya, the Shaʿbāniyya and the Naḳshbandiyya before creating his own order and settling in the Ottoman capital from 1155/1742 onwards, where he then headed a *tekke* outside the Egriḳapî Gate. Another branch, the Ṣalāḥiyya, was created by ʿAbd Allāh Ṣalāḥ al-Dīn ʿUshshāḳī (d. at Istanbul between 1196/1782 and 1198/1784), son-in-law and disciple of the previous *shaykh*, and called *pīr-i thālith* or third master of the order. He is above all known for having made the teachings of Ibn al-ʿArabī his own (he is said to have been called the Muḥyī al-Dīn of the Turks) and for having left behind numerous works. A further branch of the order was founded in western Anatolia, in the region of Čanaḳḳale, by Aḥmad Djāhidī ʿUshshāḳī, another *khalīfa* of Meḥmed Djamāl al-Dīn (d. 1170/1756-7, not 1070/1659-60, as is sometimes found in the literature). In the 19th century, several ʿUshshāḳī groups are said to have grown close to the Bektāshiyya, especially the Djāhidiyya (which is said, however, subsequently to have declined). Also, the *shaykh* Emīn Tewfīḳ, settled in Istanbul since 1285/1868-9, is said to have attracted numerous Bektāshīs to his side. During this second period of the order's history (mid-18th century to 1925), the ʿUshshāḳiyya seem to have been especially strong in Edirne and the region around it (notable at Dimetoka, Filibe and Aydos), in Istanbul (with five centres there) and in western Anatolia (Čanaḳḳale, Balîkesir, Bursa, Izmir, Kula, Nazilli, etc.).

Since the 1970s, the order, which has disappeared elsewhere, has re-emerged in Turkey, especially in the region of Balıkesir (where resides its present spiritual head, Sıddık Naci Eren, author of numerous works recently published) and at Istanbul, where the *tekke* at Kasımpaşa has been completely renovated since 1982. *Dhikr* is performed there twice a week, on Thursdays and Sundays (the dervishes first perform this sitting, then standing upright, and make the *dewrān* by means of leaps).

(NATHALIE CLAYER)

USHURMA, MANṢŪR, the first *imām* of the North Caucasus, who led the local Muslim resistance to the Russian conquest in 1199-1206/1785-91.

1. His career

Born in Aldī (Aldy), a village south-west of Grozny, of the family of a poor Čečen farmer, Ushurma spent his early years looking after his neighbours' flocks. He may have received some rudimentary Islamic education under a local *mullā* or scholars in nearby Dāghistān, although contemporary Russian and Ottoman sources consider him to be illiterate. At the age of 26 or later, he renounced the world, divorced his wife and went into retreat, in which he experienced a vision of two mounted messengers from the Prophet who entrusted him with the mission to spread and enforce Islam among the Čečens and their neighbours. Soon afterwards, in 1198/1784, he took the name "Manṣūr", proclaimed himself *shaykh* and *imām* of the mountain peoples and invited them to abandon their non-Islamic ways (i.e. tribal customs (*ʿādat*), wine-drinking, and the smoking of tobacco), and to observe strictly the *Sharīʿa*. His preaching had egalitarian overtones, which made it popular with the impoverished peasants and marginalised elements of the Čečen, Kabard, Ḳumuḳ and Noghay Tatar [*q.vv.*] tribes, whose traditional life-style was disrupted by the Russian colonial encroachment and the growing economic inequity between them and their nobility, members of which tended to co-operate with the Russians.

In Djumādā I 1199/March 1785, following two powerful earthquakes which may have been inter-

preted by the mountain peoples as an eschatological sign, Manṣūr called upon his fellow Čečens to attack Kabarda in order to bring its tribes in line with the *Sharīʿa*. Whether at that point his preaching included a call to holy war against the infidel Russians is not clear. Nevertheless, the Russian military administration of the Caucasus reacted strongly by sending Col. Pieri with a considerable force to take him prisoner. The Russian contingent reached Aldy, stormed and burned it, chasing its inhabitants into the mountains. However, Manṣūr and his followers escaped and, on the return march, ambushed the Russians in a thick forest, killing some 600 soldiers and officers, including the commander. Heartened by their victory, Manṣūr's disciples declared it to be evidence of the divine support enjoyed by their leader. His ranks swelled as he was joined by the previously reluctant nobles from Kabarda and Dāghistān, who brought with them their disciplined and well-armed retainers. In the summer of 1199/1785, Manṣūr marched on the Russian fortified town of Kizlyar, on the Terek, invested it and burned one of the outlying forts. However, his troops had to withdraw after their attack was repulsed by the Russian artillery. The subsequent siege of a smaller Russian fortress, Grigoriopolis, also ended in failure. These reversals did not discourage the *imām*. In August 1785, he launched a second attack on Kizlyar, which resulted in heavy casualties and desertions among his levies. Yet Manṣūr continued to enjoy the support of some powerful Kabard princes as well as many Čečens, Ḳumuḳs and Dāghistānīs. However, in November 1785, his motley army was routed by a Russian force led by Col. Nagel. This defeat caused the Kabard and Ḳumuḳ princes and nobles to desert Manṣūr and to throw themselves on the Russians' mercy.

Manṣūr took refuge in the mountains of Čečnya, from where he continued to harass Russian fortresses along the Caucasian Line. However, with his reputation on the decline and his levies rapidly dwindling due to want of success, he was reduced to seeking a truce with his Russian foes, but these last were not ready to accept anything short of complete surrender. Hence Manṣūr continued to raid Russian fortresses and villages from his mountain strongholds. Gradually, he shifted the focus of his propaganda from Kabarda to the Western Caucasus, which was home to the warlike mountain tribes, known collectively as the Adīghes (Čerkes [*q.v.*]). This shift may have been occasioned in part by the growing interest in his activities of the Ottomans, who had previously denied him their support, viewing him as a rabble-rouser. However, when a new Russo-Turkish war became inevitable, the Turkish military command in the fortified Black Sea ports of Anapa [*q.v.*] and Sögüdjuk (Sudžuk) decided to use the *imām*'s religious prestige in order to unify the fiercely independent Circassian tribes and to bring them under Ottoman command. They aimed at making him a conduit of Ottoman influence on the anarchic Čerkes and Noghays, who were almost as suspicious of the Ottomans' designs on their lands as they were of Russians. Shortly before the war, Manṣūr made a number of successful raids across the Kuban river and ravaged the territories under Russian control, carrying off hundreds of prisoners and thousands of cattle and sheep. When the war broke out in August 1787, the Russians decided to put an end to this guerilla warfare. An expedition sent against Manṣūr by the viceroy of the Caucasus, Count Potemkin, soundly defeated his levies in several bloody engagements. Manṣūr made his last stand on the Urup river, where, on 20 September 1787, his force was demolished by General Tekelli, causing the *imām* to seek refuge in Anapa. From that moment onwards, Manṣūr played practically no role in the Russo-Turkish hostilities that ensued. With the war going badly for the Ottomans, Manṣūr found himself trapped in Anapa, which was soon besieged by the Russians. After the fall of this Ottoman fortress, he was taken prisoner and sent to St. Petersburg for the Empress's inspection, who viewed him as a dangerous rebel (*buntovšik*). During an interrogation at the Peter-and-Paul Fortress, Manṣūr attacked his guard and stabbed him to death. In consequence of this episode he was shackled with chains and sent to the Schliesselburg Fortress, where he died on 13 April 1794.

2. Manṣūr's *ghazawāt*

Manṣūr was the first North Caucasus leader who consistently used Islam to unite the fiercely independent and mutually hostile tribal societies in the face of Russian colonial expansion. He may, therefore, be rightly regarded as the precursor of the three *imāms* of Dāghistān who waged a holy war against the Russians in 1829-59 [see SHĀMIL]. However, unlike the Dāghistānī *imāms* who had strong Ṣūfī credentials, there is no hard evidence so far to link Manṣūr to either the Naḳshbandiyya [*q.v.*] or any other Ṣūfī order. Furthermore, he does not seem to have received any formal religious education, which was to be so important for Shāmil's image among his followers. A Turkish student of theology (*sōfta* or *sōkhta*), who was sent by the Ottomans from Istanbul to examine Manṣūr's religious qualifications, reported that he was an illiterate shepherd who was ignorant even of Islam's fundamentals, not to mention sophisticated theological speculation. His humble background as well as the low social status of his following help to explain why the Ottomans, ever suspicious of popular religious leaders, neither supported his movement nor took advantage of his capabilities, especially at the early stages of his rebellion. The same is true of the Kabard, Čerkes and Noghay nobles, who, with a few exceptions, either refused to join him or deserted after the first reversals. Given these formidable odds, Manṣūr's long resistance to the Russian advance is all the more impressive and shows him to have been "a born leader of men, endowed with some high qualities to a very remarkable degree" (Baddeley, 51).

The rare accounts of the *imām*'s religious calling in Russian and Ottoman archives evince a familiar pattern which he shares with many contemporary Muslim reformers, such as Aḥmad b. Idrīs, al-Tidjānī, Muṣṭafā al-Bakrī and Shāh Walī Allāh [*q.vv.*]. Yet in contrast to these highly versatile and prolific scholars, Manṣūr left no written legacy, except for a few brief letters to his followers and the Ottomans, which he probably dictated to his cultured secretaries. Manṣūr claimed to be in direct contact with the Prophet and thus able to foresee the future and protect his followers from enemy fire. He often appeared to his followers with his face covered by a shawl, a practice reminiscent of earlier claimants to special powers (cf. al-Muḳannaʿ [*q.v.*]). Far from claiming prophethood, as Russian sources try to have us believe, Manṣūr seems to have presented himself as a divinely-inspired "renewer" (*mudjaddid* [*q.v.*]), the person who appears at the turn of each Islamic century to restore Islam to its original purity. It is not fortuitous, therefore, that the public announcement of his *ghazawāt*, preceded by several years of intense meditation, was made in A.H. 1199.

The long-standing confusion in academic and popular accounts of the Caucasian Wars over Manṣūr Ushurma's religious claims (he was routinely described

as a "false prophet", "charlatan" or "impostor") springs, in large part, from the ignorance of Islamic doctrines on the part of the Russian colonial administrators who witnessed the rise and fall of his movement. The almost total illiteracy of his rank-and-file supporters, who were prone to misinterpret or exaggerate his claims, did little to dispel the Russians' misconceptions. The perplexity over Manṣūr's real goals and identity took a curious twist when an 18th-century Florentine periodical identified Manṣūr as the renegade Dominican monk and adventurer Giovanni Battista Boetti, in an elaborate literary hoax that was taken at face-value by some 19th-century Western and Russian scholars. More recently, a re-imagined and idealised figure of Shaykh Manṣūr has become an important nationalist symbol of Čečnya's struggle for independence from Russia (1994-6).

Bibliography: For a standard Russian view of Manṣūr, see V.A. Potto, *Kavkazskaya voyna*, Stavropol' 1994, i, 134-50; cf. J. Baddeley, *The Russian conquest of the Caucasus*, London, 1908, 47-56, which is based almost entirely on Russian sources. In Soviet historiography, a generally hostile approach to Manṣūr, which portrayed him as a Turkish agent, was for many decades determined by the works of N.A. Smirnov, e.g. *Turetskaya agentura pod flagom islama*, in *Voprosî istorii religii i ateizma*, Moscow 1950, 11-63; idem, *Politika Rossii na Kavkaze v xvi-xix vekakh*, Moscow 1958, 135-62. For a revisionist view of Manṣūr in nascent Čečen historiography, see Sh.B. Akhmadov, *Imam Mansur*, Grozny 1991, and *Sheikh Mansur i osvobodite'lnaya bor'ba narodov Severnogo Kavkaza*, Grozny 1992, cf. *Central Asian Survey*, x (1991), 81-92. A detailed account of Manṣūr's movement, which is based on both Russian and Ottoman sources and which emphasises his perceived Ṣūfī connections, is A. Bennigsen, *Un mouvement populaire au Caucase au XVIII^e siècle*, in *Cahiers du monde russe et soviétique*, v/2 (April-June 1964), 159-205. For a recent attempt to place Manṣūr in a broader historical, religious and social context, see A. Zelkina, *Islam and society in Chechnia*, in *Jnal. of Islamic studies*, xii/2 (1996), 240-64. (A. Knysh)

ÜSKÜB, the Turkish form of the place-name Skopje, the capital of the present Macedonian Republic. It lies on the banks of the Vardar river [see wardar] in the northwestern part of the plain, the Skopsko Polje, at an altitude of 220-340 m/720-1,115 feet, in a fertile valley surrounded by mountains. Its central position as a crossroads, with a rich hinterland, in the Balkan peninsula, has always made Skopje the economic, cultural and political centre of the region.

A few kilometres to the northwest of the present city was an Illyrian colony called Skupi, which became, at the end of the 1st century B.C., the capital of the Roman province of Dardania (see *PW*, s.n. *Skupi*). Destroyed by an earthquake in 518, the Byzantine town was completely rebuilt by Justinian I as Justiniana Prima, and from this time dates the monumental aqueduct (bringing water to the town from the Skopska Crna Gora) and the fortress on the left bank of the Vardar. At this time, Byzantine Skopia was several times attacked by the incoming Slav peoples, and briefly conquered by them towards the end of the 7th century, but for the next six centuries remained substantially in Byzantine hands, with intervals of Serbian and Bulgarian domination. Towards 1282 Skopje passed definitively to the Serbs, and became the capital of several of their mediaeval kings, who minted coins there and built palaces, churches and monasteries (Milutin, 1282-1321; Stevan Dečanski, 1321-31; Dušan, 1331-55 [who was crowned emperor there in 1346 and who promulgated there his famous law code in 1349]; Uroš, 1355-71; Vukašin, 1365-71; etc.), with its annual eight-day fair attracting merchants from as far away as Dalmatia and Venice.

At the opening of 1392 (on 6 January?) the town was occupied by the Ottomans, thereby beginning over five centuries of Turkish domination (till 1912) (cf. F. Bajtaktarević, *EI*[1] art. *Üsküb*, with references, also the notes of H. Šabanović accompanying his translation of extracts from Ewliyā Čelebi, *Putopis, odlomci o jugoslovenskim zemljama*, Sarajevo 1967, 278-92). Conscious of its strategic importance for controlling the Balkan lands further north and for watching over their Christian vassals and tributaries, the Ottomans deported part of the town's population and brought in Turkish and other Muslim colonists from Anatolia and beyond. Hence Üsküb changed rapidly in appearance, with the destruction or transformation of its ancient palaces, churches and monasteries and the building of mosques (such as the Khünkār one built by Murād II in 1436-7 on the site of the old palace of the Serbian kings), *ḥammāms*, *khāns*, *medreses*, *tekkes*, *türbes*, etc.

Now well behind the war zone, with a garrison which at times did not exceed 300 men, Üsküb enjoyed a spectacular development from the 9th/15th to 11th/17th centuries, rapidly becoming one of the most important centres of Ottoman Rumelia. It was an administrative centre, where coins were minted, and enjoyed a great cultural role, where several Ottoman figures of renown lived for more or less long periods, including the poet ʿAṭāʾ (d. 930/1523-4; cf. Gibb, *HOP*, ii, 191), the scholar Isḥāk Čelebi (d. 949/1542-3; cf. Gibb, iii, 40-5), ʿĀshiḳ Čelebi (d. 979/1571-2 [*q.v.*]), the prose writer Weysī/Uweysī (d. 1037/1627-8 [*q.v.*], Newʿī-zāde ʿAṭāʾī (d. 1044/1634-5 [*q.v.*]). etc., whilst several of its *medreses* acquired a good reputation. It was a flourishing commercial centre, with colonies of Ragusan, Jewish, Armenian, Greek and Vlach merchants. *Ca.* 1450 the town had 33 *maḥalles* (25 Muslim and 8 Christian), and a century later, in 951/1544, 67 (53 Muslim and 14 Christian), and 1,015 shops. Various Western travellers described it when it was at its apogee in the 10th-11th/16th-17th centuries, as also Muslim travellers like Kātib Čelebi/Ḥādjdjī Khalīfa and Ewliyā Čelebi. The latter records 70 *maḥalles*, 10,060 solidly-built houses, 2,150 shops, 120 mosques and *mesdjids* (45 of which were congregational ones), 9 *dār al-ḳurrāʾ*, 70 *mektebs*, 20 *tekkes*, etc. The estimated population figures vary, with 12,000 houses and 60,000 persons in 1689.

This period was brusquely ended with the War of the Sacra Liga, when Austrian troops under Piccolomini, supported by local Serbian insurgents, crossed the Danube and Sava and completely sacked and razed Üsküb on 26-7 October 1689. When the Turks re-occupied the town in 1690, most of the population had fled, the Muslims towards Istanbul and the Serbs, under their Patriarch Arsenije Čarnojević, towards the Serbian lands further north and Hungary. Plague outbreaks further diminished the population, though Christian Orthodox Serbs from Skopska Crna Gora and Muslim Albanians from northern Albania, Kosovo and the Debar region now came in, and there were periodic earthquakes. At the end of the 18th century, Üsküb was a small town of little importance, with *ca.* 6,000 inhabitants, the Muslim quarter on the left bank of the Vardar, the Christian one on the right bank, and the Jewish one below the fortress.

Only after 1800 did influxes of population cause a revival of Üsküb in the first decades of the new cen-

tury. In these early years, Orthodox Christians came from Kosovo-Metohija and Macedonia, where they were being terrorised by Muslim Albanian bands in a period of declining Ottoman control, whilst Muslim *muhādjirs* came in from the lands reconquered or occupied by the Serbians and the Austro-Hungarians, above all in the last quarter of the century (the sources record *ca.* 2,000 *muhādjirs* arriving from Bosnia-Hercegovina after 1878, who settled in a new quarter named after them, the *Madžir mahalle* on the right bank of the Vardar; most of these later left for Turkey during or after the Balkan Wars of 1911-12 or after the First World War) [see MUHĀDJIR. 2]. With the Ottoman state managing to stabilise itself after 1840, Üsküb's commerce revived at the coming of railways, especially after the completion in 1888 of the Belgrade-Salonica line through the town, putting it in contact with Central Europe. Hence the population rose at the end of the 19th century to 32,000 (17,000 of these being Muslims, mostly Albanians, but in part Turkicised ones, 14,200 Christians and 800 Jews). It is at this time that a Muslim press first appears there, with *Ḳoṣowa* as the official journal of the *wilāyet* (the administrative centre having been transferred from Priština to Üsküb in 1875) from 1888 till 1909, three issues of the *sāl-nāme* for the *wilāyet*, and a non-official press after the Young Turk Revolution (*Yildiz, Enwār-i Hürriyyet, Arš*, etc.) (see N. Clayer and A. Popovic, *Les revues turques d'Üsküb et de Manastir à la fin de l'époque ottomane*, in B. Kellner-Heinkele and P. Zieme (eds.), *Studia Ottomanica. Festgabe für G. Hazai*, Wiesbaden 1997, 21-30), though this last was of short duration, the 1911-12 wars sounding the knell of the Ottoman presence in the region.

Captured by the Serbian army in 1912, Skopje (Serbian: Skoplje) and Macedonia were occupied 1915-18 by Bulgarian troops before becoming part, in December 1918, of the new Kingdom of the Serbs, Croats and Slovenes [see YUGOSLAVIA] as the centre of "South Serbia". It rapidly became a fully modern city, with a population in 1941 of 80,000. A good part of the Muslims (mainly Turks) migrated to Turkey, especially in 1920-4, so that the Muslims then represented only one-third of the population, now mainly Orthodox. These Muslims retained in the inter-war period some 15 mosques, some 30 *mesdjids* and 16 *tekkes* belonging to various dervish orders. The community had over it an "Ulema-medžlis", a *Wakf-meʿārif* council and a superior court of the *Sharīʿa*, and there were *mektebs* and lower-quality *medreses* plus a well-organised state lycée founded in 1925 ("Velika medresa Kralja Aleksandra I^og^"). The Muslim press had some dozen titles, in Turkish and in Serbo-Croat (*Ukhuwwet*, 1919; *Sosiyalist Fedjri*, 1920; *Rehber*, 1920; *Birlik*, 1925; *Ḥaḳḳ Yolu*, 1925; etc.), some, however, only ephemeral. The main, and most interesting, of the three Muslim political parties was the "Džemijet" (1919-25), not yet studied in detail. The Ṣūfī orders had continued somehow to function in Skoplje, since a certain number of *sheykhs* and dervishes emigrated to Turkey (see G. Elezović, *Derviški redovi muslimanski. Tekije u Skoplju*, Skoplje 1925).

During the Second World War (1941-4), Skoplje and Macedonia in general were occupied by Bulgarian, and latterly German, troops, bringing about the flight of part of the Serbian population and its replacement by incomers from western Macedonia. At its liberation (13-14 November 1944), Skopje became the capital of the Federated Republic of Macedonia within the Yugoslav Republic, and now began a spectacular urban and economic development, reaching a population of half a million *ca.* 1985, despite a significant emigration of part of the Turkish population of Macedonia, especially during 1950-1. The remaining Muslim community of Skopje (naturally, very closely controlled by the Communist régime), benefited from the 1950s onwards, like the rest of Yugoslavian Muslims, from a more tolerant official attitude towards religious life: permission for child education in the mosque; freer permission to perform the Pilgrimage; a Muslim press (though not till 1987 did the first periodical appear in Skopje, *El-Hilal*, published in Macedonian, Turkish and Albanian); more tolerance for the public celebration of religious festivals, etc.; and finally, in 1984, opening of the Isa-beg *medrese*. The main *tekke* of the city, that of the Rifāʿiyya, continued to function, though the massive emigration of Turks lost it a significant number of adherents. On the other hand, there was a considerable increase of *sheykhs* and dervishes from Muslim gypsy groups.

After the breakup of Titoist Yugoslavia in 1991-2, Skopje became the capital of the State of Macedonia. Like the rest of the region, its economic situation has become difficult. The Muslim community there, as in Macedonia in general, has become reorganised, but divisions between Albanian and Macedonian Muslims have become more and more apparent.

(A. POPOVIC)

ÜSKÜDĀR, known in Western Europe as SCUTARI, the most important of the Asian shore suburbs of Istanbul, situated at the southern end of the Bosphorus.

We are ignorant of both the origin of the name and the exact date of its conquest by the Turks. Since Antiquity it was called Chrysopolis (Xenophon, *Anabasis*, vi. 6) and seems to have been a suburb of the Greek colony of Chalcedon. The first person to give the place its present name, as Escutaire, is Villehardouin in 1203 (*Conquête de Constantinople*, Paris 1961, i, 136-9), whilst Nicholas Choniates (ed. Bonn, 268, 331) mentions Manuel Comnenus' palace of Scoutarion, at the cape of Damalis, to the west of Üsküdār. Although *skoutarios* for a shield-carrying soldier was used in the 4th century, and it has been suggested that the place name stems from a corps of *skoutarioi* founded by Valens, the form *skoutērios* only appears in Byzantine titulature, that of the kingdom of Nicaea, in the 13th century; before this, the Byzantines used *skoutarioi* for the squires of the Franks. In view of Manuel Comnenus' intensive building programme after his marriage to Bertha of Sulzbach, one might suggest provisionally that, towards the middle of the 12th century, a term imported from the

West gave its name to a palace and then the suburb where it was situated; Phrantzes (ed. Bonn, 112) states in the 15th century that the place "today called Scutari formerly [was called] Chrysopolis".

There were several Ottoman Turkish incursions after the battle of Pelekonon in 1329, but no source confirms the date of 1352 given by Uzunçarşılı (*İzahlı osmanlı tarihi kronolojisi*, i, 25). Since there is a lack of historical mention or of traces of pre-1453 buildings there, one may conclude that any more or less effective Ottoman control of the Asiatic shore of the Bosphorus before the fall of Constantinople was not accompanied by any permanent settlement. Bertrandon de la Broquière, who crossed the Bosphorus at Üsküdār en route from Bursa to Pera in late 1432 or the beginning of 1433, merely states that "audit Escutary, assés bon lieu pour chargier et deschargier gens et chevaulx... y avoit des Turcs qui gardoient le passaige et recepvoient l'argent du tribut qu'il falloir baillier pour passer" (*Le voyage d'oultremer*, 140).

With the arrival of the Ottomans, Üsküdār replaced Chalcedon/Ḳāḍīköy as the bridgehead for Constantinople towards Asia. The *k͟hāṣṣ* registers for 1498 for the vicinity of Istanbul mention the *müsellemān-ī ḳalʿa-yi Üsküdār*, all with Slav names, signifying the existence of walls, and mention vineyards in the town's environs, also cultivated by Christians (BBK, TT 1086, fols. 134a, 135a). This fortified point must have been situated at the side of the present Salacak. The mosque built by Muṣṭafā III in 1758-61 and called Ayazma D̲j̲āmiʿi after an Ottoman palace of that name known since the 16th century and perhaps continuing in some way the Skoutarion of the Comneni, marks the town's acropolis. This same register mentions a *nefs-i Üsküdār* and also a *ḳarye-yi U.*, with six *ortaḳčī*s (share-croppers on the royal domains) and two *reʿāya*, all Christians. Since the share-croppers registered in this document are all persons deported from various parts of the Balkans, it appears that Üsküdār was, like other environs of Istanbul, at least partially resettled after the conquest of Constantinople.

The first post-conquest building mentioned is the mosque of Rūm Meḥmed Pas̲h̲a, Grand Vizier 1466-9, completed in 876/1471-2, within the ancient town, on the edge of the gardens of the Ayazma palace. In the next century, Süleymān I restored the palace of Üsküdār and in 955/1548 built, in the name of his daughter Mihr-i māh, a complex on the sea front, where were the remains of the ancient port, comprising a mosque, school, *ʿimāret* and caravanserai. This strengthened the role of Üsküdār as the bridgehead on the Asiatic shore and gave the signal for its development. In 988/1580 Sinān [*q.v.*] built for S̲h̲emsī Pas̲h̲a a small complex on the sea front, a jewel of Ottoman architecture, whilst this same architect built for the queen-mother Nūr Bānū [*q.v.*] in 991/1583 an imposing ensemble on a height to the east of the town. The palace of Ḳawaḳ was probably begun in the early 17th century on the site now called Harem, on the vast site now occupied by the Selīmiyye barracks and its espanade. In 1050/1640 Kösem Sulṭān [*q.v.*] built the Čīnili D̲j̲āmiʿ on the eastern heights, and a third queen-mother, Emet Allāh Sulṭān, in 1708 built the Yeñi Wālide D̲j̲āmiʿ in the town centre. In 1760 Muṣṭafā III built the Ayazma mosque on the remains of the palace there, and Selīm III in the opening years of the 19th century built a mosque and barracks for his Niẓām-i D̲j̲edīd [*q.v.*] on a part of the Ḳawaḳ grounds; the barracks were burnt down by the rebellious Janissaries on the sultan's deposition, but rebuilt in 1825-50 in their present form. During the Crimean War, 1854-6, the Ḥaydar Pas̲h̲a Military Hospital was built on the sea front, to the south of the Selīmiyye barracks and to the north of the present Haydar Paşa railway station (terminus on the Asiatic shore for the line from Anatolia) and harbour. The hospital tended the Allied wounded, and adjacent to it is a cemetery where 8,000 British dead are buried. One should also mention Üsküdār's many dervish *tekke*s in Ottoman times, with the Rifāʿiyya *tekke* especially well known latterly, as well as the fame of Üsküdār until today for its immense Muslim cemetery, the Büyük Mezāristān.

In the mid-17th century, Ewliyā Čelebi, i, 472, counted 70 Muslim quarters, 11 Greek and Armenian and one Jewish. Vyzantios, *Konstantinoupolis*, Athens 1862, ii, 246, cites for the 1840s 72 quarters, of which three were Armenian, on the heights to the east and south of the town, plus a Greek one of 400 families, installed in the 19th century. The two Armenian churches still extant today date from 1617 and 1687. The Jewish quarter was situated, according to Eremiya Çelebi, *Istanbul tarihi*, Istanbul 1952, 54, on the sea front near the mosque of S̲h̲emsī Pas̲h̲a; it comprised Jews who came from G̲h̲alaṭa [*q.v.* in Suppl.] in 1618 (Naim Güleryüz, *Istanbul sinagogları*, Istanbul 1992, 49), but has now disappeared. V. Cuinet, *La Turquie d'Asie*, Paris 1894, iv, 642, gave a figure of 82,000 for the town's population at the end of the 19th century, including 6,000 Greeks, 7,500 Armenians and 1,500 Jews. In 1940 the population of the *kaza* of Üsküdar, including the villages of the Asiatic shore as far as the Küçüksu river, was 54,969, and in 1990, 395,623.

USRŪS̲H̲ANA, the name of a region lying to the west of Farg̲h̲āna [*q.v.*] in mediaeval Islamic Transoxania, now falling in the region where the eastern part of the Uzbekistan Republic, the northernmost part of the Tajikistan Republic and the easternmost part of the Kirghiz Republic meet.

The form Usrūs̲h̲ana is the best known, although Yāḳūt (i, 245) says that Us̲h̲rūsana is preferable. In the Persian versions of the text of al-Iṣṭak̲h̲rī and in the Persian text of the *Ḥudūd al-ʿālam* we find more often Surūs̲h̲ana, while Ibn K̲h̲urradād̲h̲bih sometimes has S̲h̲urūsana; the original form may have been Srōs̲h̲ana. This district lay to the northeast of Samarḳand, between that town and K̲h̲ud̲j̲and, and to the south of the Sīr Daryā (Sayḥūn), so that it formed the approach to the valley of Farg̲h̲āna; on the northwest it was bounded by the steppe. The southern part was occupied by the Buttam(ān) mountains, which ran along the upper course of the Zārafs̲h̲ān; these hills were generally regarded as forming part of Usrūs̲h̲ana. The geographical information about this region is based almost exclusively on the geographers of the 4th/10th century, and the later geographers down to Ḥād̲j̲d̲j̲ī K̲h̲alīfa only repeat what their predecessors have said; it appears therefore that the name Usrūs̲h̲ana had fallen into disuse before the end of the Middle Ages. As a result of its numerous streams, which flow into the Sīr Daryā, it was at one time a rich country, visited by many travellers because the route to Farg̲h̲āna lay through it. The geographers describe several roads from Samarḳand to K̲h̲ud̲j̲and,

all of which passed through the towns of Sābāṭ and Zāmīn; the name of the latter place still survives. The principal town—in which in the 4th/10th century the governor lived—was in all probability called Nawmandjkath—this must be the basis of the more or less uncertain readings of a number of manuscripts (cf. especially al-Balādhurī, *Futūḥ*, 420); the form Bundjīkat given by Yāḳūt (i, 744; but see also iv, 307, where the name is Kunb) and adopted by Barthold is a late corruption; it lay a little to the south of the great road and was identified in 1894 by W. Barthold with the ruins called Shahristān to the south of the present town of Ura Tube; these ruins were examined a little later by P.S. Skvarski. The geographers describe the town in detail. Two other towns of some importance were the abovementioned Zāmīn and Dīzak, and a number of other places are recorded; there were also rural areas without towns, while al-Yaʿḳūbī (*Buldān*, 294) says that there were 400 fortresses in the country. In the 4th/10th century there was an important market-place called Marsamanda. There is some further geographical information about the country in the *Bābur-nāma*.

At the time when the first Arab invasion of the country took place under Ḳutayba b. Muslim [*q.v.*] (94-5/712-14), Usrūshana was inhabited by an Iranian population, ruled by its own princes who bore the title of *afshīn* (Ibn Khurradādhbih, 40). The first invasion did not result in conquest; in 119/737 the Turkish enemies of the governor Asad b. ʿAbd Allāh al-Ḳasrī fell back on Usrūshana (al-Ṭabarī, ii, 1613). Naṣr b. Sayyār [*q.v.*] subdued the country incompletely in 121/739 (al-Balādhurī, 429; al-Ṭabarī, ii, 1694), and the Afshīn again made a nominal submission to al-Mahdī (al-Yaʿḳūbī, *Taʾrīkh*, ii, 479). Under al-Maʾmūn, the country had to be conquered again and a new expedition was necessary in 207/822. On this last occasion, the Muslim army was guided by Ḥaydar, the son of the Afshīn Kāwūs, who on account of dynastic troubles had sought refuge in Baghdād. This time the submission was complete; Kāwūs abdicated and Ḥaydar succeeded him, later to become one of the great nobles of the court of Baghdād under al-Muʿtaṣim, where he was known as al-Afshīn [*q.v.*]. His dynasty continued to reign until 280/893 (coin of the last ruler Sayr b. ʿAbd Allāh of 279 [892] in the Hermitage in St. Petersburg); after this date, the country became a province of the Sāmānids and ceased to have an independent existence, while the Iranian element was eventually almost entirely replaced by the Turkish.

Bibliography: The information of the mediaeval Arabic geographers was utilised by Barthold in his description of the region, *Turkestan down to the Mongol invasion*[3], London 1968, 165-9, to which should now be added *Ḥudūd al-ʿālam*, tr. Minorsky, 115, comm. 354. See also Le Strange, *The lands of the Eastern Caliphate*, 474-6. (J.H. Kramers*)

USTĀDĀR (P.), the title of one of the senior *amīrs* in the Mamlūk sultanate (1250-1517), who headed the *Dīwān al-ustādāriyya* that was responsible for managing expenditure on the sultan's household supplies, including the sultan's kitchens and beverage house (*sharāb khāna*) and various other needs, such as clothing for those living in the household, his *mamlūks* and others. The *Ustādār* was in charge of the food tasters (*al-djāshankīriyya*) even though their head, like himself, might be an Amīr of a Hundred. The *Ustādār* was also responsible for the court retinue and the servants [*al-ḥāshiyya wa 'l-ghilmān*] in the sultan's palace and even had judicial authority over them.

During the rule of al-Ẓāhir Barḳūḳ and with the establishment of the *dīwān al-mufrad*, the office of the *Ustādār* was further strengthened. Barḳūḳ appointed the Amīr Djamāl al-Dīn Maḥmūd b. ʿAlī as *Ustādār* while also putting the administration of state matters in his hands. Djamāl al-Dīn took over the authority that had previously been in the hands of the Vizier and the Supervisor of the Private Fisc, who now became his subordinates. Thus the *Ustādār* took over the management of the sultanate's treasury. During the reign of Barḳūḳ's son, al-Nāṣir Faradj, the *ustādāriyya* was given to Djamāl al-Dīn Yūsuf al-Bīrī al-Bidjāsī, again together with the administration of all the sultanate's affairs. From that time onwards, it became accepted practice that the administration of the sultanate was in the hands of the *Ustādār* who acted as the Grand Vizier had done during the ʿAbbāsid caliphate in Baghdad. Yet in the 9th/15th century, this relative elevation of the *Ustādār*'s status was offset by the general decline of the *amīrs*' status that followed the rise in status of the rank-and-file *mamlūks*. As the man in charge of the treasury, the *Ustādār* now became subject to pressure from these latter *mamlūks*; it could even happen that he was beaten by them and had his home looted when there were delays in payments due to them, or he might even be held hostage until their claims had been met.

USTĀDH, Ustād (A., pls. *ustādhūn, asātidha*), a term used from early Islamic times onwards to denote a person eminent and skilful in his profession. The word is clearly non-Arabic in origin, as was early recognised, see al-Djawālīḳī, *al-Muʿarrab*, ed. A.M. Shākir, Cairo 1361/1942, 25; Lane, *Lexicon*, 56c). In fact, the word is Iranian, Pahlavi *awestād* "master (craftsman)", see D.N. McKenzie, *A concise Pahlavi dictionary*, London 1971, 14 (also occurring in Manichaean MP as *'wyst'd*). Through its usage in the Muslim West, it may have given Spanish *Vd.* = *Usted*, though Hispanists usually reject this; a possible compromise has been suggested by G. Krotkoff, *A possible Arabic ingredient in the history of Spanish* Usted, in *Romance Philology*, xvii (1963), 328-32.

1. In Arabic

In classical Arabic, the term has a wide range of meanings since it designates, at one and the same time, an intelligent and highly-esteemed person, a master (in the sense of professor, maestro, especially in music) and also master craftsman. There is also the developed sense of "eunuch", a synonym of *khaṣī* [*q.v.*]. The feminine form *ustādha* is attested for a musician or female master-musician. In its different senses, *ustādh* corresponds, *grosso modo*, to the Arabic word *shaykh*. It is thus applied to a person who has perfectly mastered an art or science and is therefore capable of teaching and transmitting his knowledge to pupils or disciples. Thus ʿAḍud al-Dawla, e.g., called Ibn al-ʿAmīd [*q.v.*] *al-ustādh al-raʾīs*. In the Fāṭimid caliphate, a certain number of high officials serving the ruler had this title, such as the crown-bearer, the master

of protocol at court, the bearer of the royal ink stand, etc. (al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, ed. Cairo, iii, 483-4, ed. Beirut 1987, iii, 550 ff.). Under the Mamlūks, there were in the sultans' household up to four officials with the title *ustāddār* (< *ustādh al-dār*) who looked after the sultan's personal expenditure, supervised the royal kitchens and domestic staff, etc. (M. Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks*, Paris 1923, pp. LX-LXI, citing Ibn Faḍl Allāh al-ʿUmarī; al-Ḳalḳashandī, *op. cit.*, Cairo, v, 457; and see USTĀDĀR).

Ustādh designates, moreover, someone with an incontestable moral authority, recognised by his peers and contemporaries as an exemplar, so that Ibn al-Khaṭīb was able to say of a great scholar, *wa-kāna al-ustādh, imām al-djamāʿa wa-sībawayh al-ṣināʿa, Abū ʿAbd Allāh al-Fakhkhār* (with *ustādh* used in an absolute sense). One might also mention that *al-Ustādh* may (just like *al-Imām, al-Ḳāḍī*, etc.) become something of an honorific name within a certain tradition, e.g. al-Ustādh among the Shāfiʿīs = Abū Isḥāḳ al-Isfarāyīnī [*q.v.*]. In the sphere of music and musicology, it denotes someone of supreme authority. Hence Yaḥyā al-Makkī (with whom Isḥāḳ al-Mawṣilī had a connection) is described in the *Aghānī* (Beirut 1970, v, 53) as *shaykh al-djamāʿa wa-ustādhuhum*, with, again, a reference to a group, a circle of disciples (*djamāʿa*), indicating how he was looked up to (cf. Dozy, *Supplément*, i, 21; also Ibn Rusta, 123, tr. Wiet, 138, describes thus an organist who played at Constantinople). The euphemistic use of *ustādh* for "eunuch" probably derives from the fact that many eunuchs held important offices, so that they inspired respect from their entourage. This explains why other euphemisms with a close-connected sense, such as *shaykh* and *muʿallim*, and in Turkish, *agha* and *khʷādja*, were also applied to them.

In modern standard Arabic, *ustādh* still retains its meaning of a school master, and especially of a university professor, as an academic title (*ustādh dhū kursī*, i.e. with a titular chair); *ustādh musāʿid*, assistant professor; and *al-ustādh al-akbar* for the Rector of al-Azhar. It is further applied, as a term of respect, to intellectuals and official personages with links to the cultural world. In Egyptian and Syro-Lebanese dialects, it is used in the polite formulae when addressing a teacher or any other person, connected with a university or not, who has connections with the cultural sphere or has great moral authority, whence the neologism *ustādhiyya* "the position of master, professorate (El-Said al-Badawi and M. Hinds, *A dictionary of Egyptian Arabic, Arabic-English*, Beirut 1986, 19). In Egypt, *ustā* is still used today as a kind of respectful title when addressing a qualified workman or especially, the leader of a troupe of female dancers and musicians (*ibid.*, 21). In the Maghrīb, the term is at present used for any teacher, whatever his status, and likewise of a doctor of the University; it is also used for any person connected with knowledge or exercising a craft requiring great skill and dexterity (A. Lentin, *Supplément au dictionnaire pratique arabe-français de Marcelin Beaussier*, Algiers 1959, 3).

Taḥḳīḳ mā li 'l-Hind*, Ḥaydarābād 1958, 3, 5, 17; Ibn al-Khaṭīb, *al-Iḥāṭa fī akhbār Gharnāṭa*, ed. al-Khāndjī, Cairo 1973, i, 487, 504; E. Quatremère, *Histoire des sultans mamlouks*, Paris 1837-44, i/1, 25-6 n. 1; Gaudefroy-Demombynes, *op. cit.*, p. LX n. 4. (F. SANAGUSTIN)

2. In Persian

The term often appears in Persian dialects as *usta* and even as *usa* (Tehrani, Yazdi). In early times it was an honorific given to learned men and teachers in the widest sense of the word, since the term conveyed the idea of a person known for his wisdom, knowledge, skill, ingenuity, etc. (see Dihkhudā, *Lughat-nāma*, s.v., with many poetic references). Al-Samʿānī names a person who, as early as the reign of the Sāmānid Ismāʿīl b. Aḥmad (279-95/892-907 [*q.v.*]), bore the title *al-ustādh* (*K. al-Ansāb*, ed. Ḥaydarābād, i, 196-7; cf. Barthold, *Turkestan down to the Mongol invasion*, 232). The famous vizier of the Būyid Rukn al-Dawla, Abu 'l-Faḍl Ibn al-ʿAmīd [*q.v.*], had this title, according to Miskawayh (see also J.Chr. Bürgel, *Die Hofkorrespondenz ʿAdud ad-Daulas*, Wiesbaden 1965, 78-9). During the Ghaznawid and Saldjūḳ periods it was used in a broad sense as the opposite of *shāgird* "pupil, novice", i.e. for a learned scholar or teacher, and also as an honorific for departmental heads in the administration in phrases like *ustād-i dīwān* (Abu 'l-Faḍl Bayhaḳī, *Tārīkh-i Masʿūdī*, ed. Ghanī and Fayyāḍ, Tehran 1324/1445, 498-9, 630; Ḥasan b. Muḥammad Ḳumī, *Tārīkh-i Ḳum*, ed. Djalāl al-Dīn Tihrānī, Tehran 1313/1934, 163). This usage for administrative heads continued into later times, as seen in Muḥammad b. Hindūshāh Nakhčiwānī, *Dustūr al-kātib*, facs., ed. A.A. Alizade, Moscow 1964, i/1, 82, 84, 101 and *passim*, with a special section on the *laḳabs* and *adʿiya* to be used for *ustāds*. By this time it was also used for master artisans (Denise Aigle, *Le soufisme sunnite en Fars*, in *L'Iran face à la domination mongole*, Paris-Tehran 1997, 244: Ustād ʿAlī Nadjdjār).

In Tīmūrid times there was a gradual shift in the term's usage, for it became mainly applied to the heads of professional groups such as gilds (cf. H.H. Roemer, *Staatsschreiben der Timuridenzeit*, Wiesbaden 1952, 143, 176, 193). This is the usage in a late Tīmūrid *inshāʾ* manual, whilst the *ʿulamāʾ* and other scholars are addressed as *shaykh* or *khʷādja* (Niẓām al-Dīn ʿAbd al-Wāsiʿ Niẓāmī, *Manshaʾ al-inshāʾ*, ed. R.D. Humāyūn-Farrukh, Tehran 1357/1958, i, 257-67). For the gild heads, see Chardin, *Voyages*, ed. Langlès, Paris 1811, iv, 92-3; *Tadhkirat al-mulūk*, facs. and tr. V. Minorsky, London 1943, tr. 58, 83. *Ustād/ustā* has continued to be used for a master craftsman until the present time. The title had always been used as a synonym for the Ṣūfī designations *shaykh*, *pīr* (R. Gramlich, *Die schiitischen Derwischorden Persiens. 2. Glaube und Lehre*, Wiesbaden 1966, 186), with reference to this person's teaching function; this is now obsolete, but in the 20th century, the term has been revived, as in the Arab world, for the highest category of teachers, i.e. university professors.

It may also be noted that, in Ottoman Turkish, *ustā* had also the meaning of "master craftsman, foreman" (cf. Redhouse, *A Turkish-English dictionary*, 87a). This person was associated, as in Persia, with the trade gilds, but also with the Janissary corps. See Gibb and Bowen, i, 281, 322, 357; and SINF. 3.

(W. FLOOR)

USTĀDHSĪS, the leader of a religious movement in Bādghīs [*q.v.*] who rebelled in 150/767 against the ʿAbbāsid government.

The people of Bādghīs had been converted by Bihāfarīd [*q.v.*] to his Zoroastrian reform doctrine that had adopted practices and prohibitions inspired by Islam. Ustādhsīs was a local chief there who had co-operated with the ʿAbbāsid governor of Khurāsān Abū ʿAwn ʿAbd al-Malik b. Yazīd (143-9/760-6). The Bihāfarīdīs of Bādghīs wrote to al-Mahdī, son of the caliph al-Manṣūr and at that time viceroy of the East, demanding to be recognised as Muslims. Al-Mahdī put

them under the command of Muḥammad b. Shaddād, who was raiding the region of Kābul, and the latter gave them a share of the war booty. After their return home, they revolted under the leadership of Ustādhsīs. Muḥammad b. Shaddād revolted at the same time in Bust in Sidjistān together with two Zoroastrian chiefs, Ādharūya al-Madjūsī and Marzbān al-Madjūsī. Muḥammad b. Shaddād's followers are described as belonging to the Lughayriyya (or Laghīriyya), an obscure Zoroastrian sect which, like the Bihāfarīdiyya, adopted some Islamic practices and beliefs. Numerous Khāridjites and Lughayrīs joined Ustādhsīs in Bādghīs, whose followers are said to have numbered 300,000. Ustādhsīs took possession of Harāt and Būshandj, where his supporters killed 700 tribesmen of ʿAbd al-Ḳays. Next they attacked Marw al-Rūdh and killed the prefect al-Adjtham together with many inhabitants of the town. In further fighting in Khurāsān, several ʿAbbāsid leaders were killed. Then al-Manṣūr sent his general Khāzim b. Khuzayma with a strong army. After prolonged manoeuvering, Khāzim, employing a ruse, defeated the rebels and 70,000 of them are said to have been massacred. Ustādhsīs escaped with some of his companions to a mountain fortress in Bādghīs. He was besieged by Khāzim, who had been joined by Abū ʿAwn and Salm b. Ḳutayba, who were also sent by al-Manṣūr. Eventually, Ustādhsīs surrendered to Abū ʿAwn, who spared his life and sent him and his family in chains to al-Mahdī. The assertion of al-Yaʿḳūbī that Khāzim carried him to al-Manṣūr, who executed him, is not confirmed by other sources. The rebellion in Bādghīs continued at least until 153/770 when al-Mahdī killed some 20,000 insurgents. According to the Khurāsānian chronicler al-Sallāmī [*q.v.*], some of his sources claimed that Marādjil, the mother of the caliph al-Maʾmūn, was a daughter of Ustādhsīs and that her brother Ghālib murdered al-Maʾmūn's vizier al-Faḍl b. Sahl [*q.v.*] at the caliph's behest. The reliability of these reports is open to question. Other sources confirm, however, that al-Maʾmūn's mother Marādjil, who died soon after his birth, was a concubine from Bādghīs.

Ustādhsīs adhered to the religious message of Bihāfarīd. In some sources he is accused of having claimed prophethood but no doctrines of his own are ascribed to him. Al-Shahrastānī (187) mentions a Zoroastrian sect named the Sīsāniyya or Bihāfarīdiyya, describing them as followers of Bihāfarīd without mentioning Ustādhsīs. If the name Sīsāniyya is derived from that of Ustādhsīs, as is commonly assumed, it would indicate that the later followers of Bihāfarīd, who survived at least until the 4th/10th century, were concentrated in Bādghīs.

(W. Madelung)

USTĀN (p.), a term of administrative geography in the eastern Islamic world dating from Sāsānid times and surviving into mediaeval Islamic usage.

In later Sāsānid times, *ustān* could denote the state domains, administered by an *ustāndār* [*q.v.*], and this usage was taken over by the Arabs when they conquered ʿIrāḳ, so that we find the term *ṣawāfī al-ustān* for the estates taken over by the caliph ʿUmar for the Islamic state (see Morony, 68-9). It also had a wider sense in Sāsānid times, as "province", with its subdivisions being *shahrs* [*q.v.*] or, in ʿIrāḳ, *kūras* [*q.v.*], and this again was taken over into Islamic usage. There was, however, some confusion over exact terminology. Thus according to Ḥamza al-Iṣfahānī, the Persians used *kūra* for part of an *ustān*, whilst the Arabs used *kūra* as the equivalent of an *ustān*; thus he says that Fārs comprised five *ustāns* or *istāns*, each subdivided into *rustāḳs* [*q.v.*] (cited by Yāḳūt, *Buldān*, i, 39, Eng. tr. in Wadie Jwaideh, *The introductory chapters of Yāqūt's Muʿjam al-buldān*, Leiden 1959, 57-8).

In high ʿAbbāsid times, *ustān/istān* acquired a special connotation regarding taxation. Ibn Khurradādhbih, 6, explains the term as meaning *iḥāza*, land taken over by the state (i.e. reflecting the events of the Arab invasions, see above), but a century later, al-Khwārazmī, *Mafātīḥ al-ʿulūm*, 59, equates it with *muḳāsama* [*q.v.*], land from which taxation was taken as a fixed proportion of its produce. In the administrative and financial usage of the 4th/10th century, *ustān/istān* is properly the taxation levied from cultivators of state lands (*amlāk*) and *ḳaṭāʾiʿ*, in effect *muḳāsama* (see muḳāsama. i; F. Løkkegaard, *Islamic taxation in the classic period*, Copenhagen 1950, 87; C.E. Bosworth, *Abū ʿAbdallāh al-Khwārazmī on the technical terms of the secretary's art*, in *JESHO*, xii [1969], 133, also in *Medieval Arabic culture and administration*, Variorum, London 1982, no. XV).

(C.E. Bosworth)

USTĀNDĀR (p.), literally "the holder of an *ustān* [*q.v.*] or province", an administrative term originally found in Sāsānid Persia for the governor of a province or for the official in charge of state domains (see Nöldeke, *Geschichte der Perser und Araber*, 448). When the Arabs conquered ʿIrāḳ, the old Sāsānid state lands were taken over as *ṣawāfī al-ustān* and administered by *ustāndārs* for the caliph ʿUmar (see M.J. Morony, *Iraq after the Muslim conquest*, Princeton 1984, 68-9 and index s.v. *ustāndār*).

The title probably continued to be used meanwhile by local potentates in the un-Islamised Caspian provinces. In the 4th/10th century it appears in Arabic historical sources, with an Ustāndār of Rūyān mentioned for the first time in connection with events of 336/947-8. The title appears on coins (see S.M. Stern, *The coins of Āmul*, in *NC*, 7th ser., vol. vi [1967], 231 ff.), and was taken up by other local dynasties of the Caspian region, probably unrelated to the Rūyān ones, in Saldjūḳ and later times.

(C.E. Bosworth)

USṬĀTH or Asṭāth (3rd/9th century), one of the earlier translators from Greek into Arabic.

His original name was Eustathius, cf. his namesake, the son of the physician Oribasius, who is spelled in Arabic the same way. Nothing being known about his life, one might assume that he belonged to the Melkite community, where the name was recommended in the calendar as that of a martyr. He translated Olympiodorus' commentary on Aristotle's *On coming to be and passing away* and a tract by Soranus, *On enemas*, which was revised later by Ḥunayn b. Isḥāḳ [*q.v.*]. His version of Aristotle's *Metaphysics*, commissioned by

the philosopher al-Kindī [*q.v.*], is partly preserved in Ibn Rushd's [*q.v.*] "Great Commentary", who also relied on a later translation by Isḥāḳ b. Ḥunayn [*q.v.*]. A comparison reveals that Usṭāth's translation is less elegant, but shows, according to Richard Walzer, "a remarkably good understanding of the by no means easy Greek text" (*Greek into Arabic*, Oxford 1962, 120). He was thus instrumental in shaping an Arabic philosophical terminology. An apologetic writer Eustathius, of unknown date, who defended against a philosopher the dogma of the Trinity, may be identical with the translator.

USṬŪL (A., pl. *asāṭīl*), also spelled *uṣṭūl* (for this type of variation, see W. Heinrichs, in *Studies in honor of Georg Krotkoff*, Winona Lake, Ind. 1997, 175-8), the most common term for a "naval fleet", and, secondarily, also for an individual "galley" or "man-of-war".

The word is a loan from Greek στόλος, which means *inter alia* "(naval) expedition" and "fleet". Al-Masʿūdī (d. 345/956 [*q.v.*]) is apparently the first to recognise the Greek origin of the word; he also gives a clear definition: *al-usṭūl kalima rūmiyya sima li 'l-marākib al-ḥarbiyya al-mudjtamiʿa* (*Tanbīh*, 141). The word is not listed in the loan-word dictionaries of al-Djawālīḳī (d. 540/1145) and Ibn Kamāl Pasha (d. 940/1533), but Shihāb al-Dīn al-Khafādjī (d. 1069/1659) has two mentions of it in his *Shifāʾ al-ghalīl*, Cairo 1282/1865-6, 38 (under *ʾ-s-ṭ-l*) and 119 (under *s-ṭ-l*). He defines it in the former passage as a naval "fleet" (*al-sufun allatī yusāfaru fīhā li 'l-ḳitāl*) and in the latter as a "man-of-war" (*markab yuhayyaʾu li 'l-ḳitāl*). Al-Buḥturī (d. 284/897) uses the term (in the first sense, although al-Khafādjī seems to suggest otherwise) in a poem addressed to the admiral Aḥmad b. Dīnār, probably on the occasion of a sea battle in 232/846-7 (*Dīwān*, ed. Ḥ.K. al-Ṣayrafī, Cairo 1963-4, ii, 984 = poem no. 387, l. 30). Although thus attested rather early, only the latest dictionaries, such as *Tādj al-ʿarūs*, take notice of it. In the later historical literature it is not uncommon. The difference between "merchant ships" and "men-of-war" is expressed as *al-marākib al-safariyya* vs. *marākib al-asāṭīl* (Ibn Mammātī, *Ḳawānīn*, 247-8). Note also the *nisba: usṭūlī* vs. *djundī*, i.e. "navy man" vs. "army soldier" (see Quatremère in *Bibl.*).

On historical, technical, and administrative details see BAḤRIYYA (for the early period, see Suppl.).

Mostafa [Muṣṭafā], *Die Chronik des Ibn Iyās. Indices*, iv, *Glossar*, Erster Abschnitt, Beirut 1992, s.v.; *TʿA*, sub radice *s-ṭ-l*; Lane, s.v. (giving only the meaning "ship of war"); Dozy, s.v. For the Greek term, see Liddell and Scott, s.v. (meanings 1 and 3); D. Demetrakos, *Mega Lexikon holēs tēs Hellēnikēs glōssēs*, Athens 1964, xiv, 6707a (meanings 1 and 5). (W.P. Heinrichs)

USTUWĀ, said to mean "uplands", a district of mediaeval northern Khurāsān, comprising the fertile plain, famed for its grain production, through whose western part the Atrek river [*q.v.*] flows. The plain lies between the modern Kūh-i Hazār Masdjid and Kūh-i Bīnālūd/Kūh-i Shāh Djahān mountain chains. Its urban centre was Khabūshān, the later Kūčān [*q.v.*]. See KŪČĀN for further details. (Ed.)

UṢŪL (A.), lit. "origins, roots", a term of Arabic grammar. Here, the applications of this term can broadly be divided into two categories, (i) most frequently in the singular *aṣl*, denoting a basic form, concept or structure, and (ii) exclusively in the plural, denoting the fundamental principles of grammar as a science.

The singular *aṣl* has a wide range of meanings extending over phonology, morphology and syntax (Baalbaki; Bohas, etc. 1990, index) conveniently summarised in Kinberg's *Lexicon* of al-Farrāʾ (s.v. *aṣl*) as "the original vocalization, form, construction, meaning, writing (in grammatical reconstruction, before phonological-morphological-syntactic-orthographical changes take place); basic function, meaning etc.; origin, source; basis; the root of a verb or noun". The following examples are intended to give a general idea of the reference of *aṣl*, ignoring chronological factors:

In phonology: (1) a standard phoneme in contrast with an allophone, (2) the original value of a phoneme before a sound change, e.g. *t* before it becomes *ṭ* by assimilation to *ṣ* in *iṣṭabara*.

In morphology: (3) a root-letter in the derivational system, symbolised by *f-ʿ-l* representing the root as a semantic entity (and thus excluding *alif*, which cannot be a root letter), in which sense *aṣl* can also denote a whole root considered as triliteral, quadriliteral etc., (4) a radical consonant opposed to an augment, e.g. *k, t, b*, but not *m* in *maktab*, (5) a morpheme opposed to an allomorph, thus *u* is the basic marker of independence (*rafʿ*) with *ū*, *ā* and *-n* as secondary markers (*furūʿ*, see below), (6) in morphophonological contexts, the assumed underlying form, e.g. **ḳawala* in *ḳāla*, and note also that the active verb is said to be the *aṣl* from which the passive verb is derived, (7) a paradigmatic constant, e.g. that certain patterns normally do not have *tanwīn* [*q.v.*], that certain singulars tend to take a particular plural pattern; likewise it is the norm, *aṣl*, for nouns to be inflected with short vowels.

In syntax: (8) a syntactical constant, e.g. that subjects precede predicates, that the particles *ḳad* and *hal* are always immediately followed by verbs, (9) the basic structure perceived as underlying certain syntactical units, thus the *aṣl* of *zayd*^{un} *ḥasan*^{u} *'l-wadjh*^{i} is *zayd*^{un} *ḥasan*^{un} *wadjhuhu*.

Some other senses of a more general nature may be indicated here: (10) the semantic identity of a word: thus the *aṣl* of *min* "from" is to denote the beginning of a limit, and cf. the general principle (stemming no doubt from law) that the meanings of words should not extend beyond their *aṣl*, (11) primary status within a set, thus *wa-* is the *aṣl* of the coordinating conjunctions *wa-*, *fa-*, *thumma*, *ḥattā*, and *an* is likewise the *aṣl* (not to mention the *umm* "mother", which terms are evidently interchangeable in this context) of all the subordinating conjunctions. Similarly the primary cause of the *djarr* (oblique case) is the "particle of obliqueness", *ḥarf/djarr*, with the occurrence of the *djarr* in annexation being regarded as secondary, *farʿ*.

Lastly (12) certain priorities are categorically referred to as *aṣl*, e.g. that nouns are more basic than verbs, singular has priority over dual and plural (so for exam-

ple the dual and plural pronouns are seen as derived from their singulars), masculine over feminine, indefinition over definition. By this point we are clearly approaching a boundary between the simple meaning of *aṣl* as a basic or primary feature and its higher, theoretical sense of a general linguistic principle, which is most closely associated with the plural term *uṣūl* used generically, often in the phrases *uṣūl al-kalām, uṣūl al-ʿarabiyya, uṣūl al-lugha*, and eventually *uṣūl al-naḥw*.

The terminological transition from *aṣl* to *uṣūl* probably reflects the change in 3rd/9th century attitudes resulting from contact with Greek scientific writings. As Baalbaki (173) points out, a latent notion of *uṣūl* as "general principles" is already discernible in al-Māzinī (d. 247-9/861-3 [*q.v.*]) and becomes explicit in his pupil al-Mubarrad (d. 286/900 [*q.v.*]), who uses the term *aṣl* in the same range of meanings as Sībawayhi (roughly as above, though we have not followed Baalbaki's formulations exactly), and adds a new sense which Baalbaki (172) glosses as "what [al-Mubarrad] considers to be the fundamental or main themes related to a certain grammatical topic". This is an accurate description of al-Mubarrad's pre-scientific, probably pedagogical usage, which is to be interpreted also in the light of the important fact that Sībawayhi (d. *ca.* 180/796 [*q.v.*]) shows almost no signs of any such notions: indeed the natural correlative of *aṣl*, namely *farʿ/furūʿ* "branch(es)" hence "derivative or secondary phenomenon" is so rare in the *Kitāb* (two instances only, neither decisive, Baalbaki, *ibid.*) that we can be quite certain that it played no significant part in Sībawayhi's linguistics, and we can draw a similar conclusion about al-Farrāʾ (d. 207/822 [*q.v.*]) from Kinberg, whose index contains no instances of *farʿ*.

The second stage is self-consciously introduced by Ibn al-Sarrādj (d. 316/929 [*q.v.*]), author of the influential *Kitāb al-uṣūl fī 'l-naḥw* (see caveat on printed editions, Bohas 1991), in which the terms *aṣl* and *uṣūl* are notably frequent. What Ibn al-Sarrādj meant by *aṣl* is easy to infer from such examples as "the *aṣl* of verbs is to be unvowelled and uninflected" (ii, 145) or "it is not that '*ḳaṣṣ*' is an unvowelled form of '*ḳaṣaṣ*', for each of them is an *aṣl*", i.e. a regular, original pattern (iii, 406), or "the *aṣl* of the vocative is to attract the attention of the person called so that he will turn towards you and you can present him with a plea for help, or an expression of surprise, praise or grief" (i, 329), from which we see that he has more or less the same concept of *aṣl* as we find in Sībawayhi and al-Mubarrad.

With *uṣūl*, however, Ibn al-Sarrādj takes a step forward on his own by interpreting *uṣūl al-kalām* collectively as the basic principles of correct Arabic, effectively synonymous with the later term *ḳawāʿid* "rules". By using these *uṣūl* as his reference point, Ibn al-Sarrādj was able to write a completely new type of pedagogical grammar in which, as he says himself, "in each chapter we have discussed a sufficient quantity of individual issues (*masāʾil*) to provide both exercise for the student and instruction for the scholar as befits this kind of work, for it is a book of basic principles" (i, 328, and cf. Baalbaki 174).

The work may thus be regarded as the second major reformulation of Sībawayhi's *Kitāb* after the *Muḳtaḍab* of al-Mubarrad, who was himself the master of Ibn al-Sarrādj, and if by its rather discursive style the *Muḳtaḍab* reminds us of al-Mubarrad's other great work the *Kāmil*, the *Uṣūl* of Ibn al-Sarrādj cannot fail to remind us of something by al-Fārābī, perhaps the *Iḥṣāʾ al-ʿulūm*. Al-Fārābī and Ibn al-Sarrādj were said to have been acquainted and to have taught each other their respective skills of logic and grammar, and the anecdotal evidence confirms that Ibn al-Sarrādj's historical role was to articulate grammar in the ordered and systematic style of the newly imported Greek sciences (cf. Versteegh, 78-9).

We may measure the ideological distance between Ibn al-Sarrādj and Sībawayhi by comparing their treatment of predication: for Sībawayhi it is indeed true that the making of statements is the primary purpose of language (*awwal*, not *aṣl*(!), *Kitāb*, ed. Derenbourg i, 6, ed. Būlāḳ, i, 7) but the value of an utterance is seen in ethical terms, as ± *mustaḳīm*: it is your social duty to your listener to finish an equational sentence once you start it (*op. cit.*, i, 394/i, 346). But Ibn al-Sarrādj, expressing himself in the modernised scientific vocabulary, declares that the basic function of speech (*aṣl al-kalām*) is the conveying of information (*fāʾida*, i, 66) and that the distinctive property of a predicate is its falsifiability (*al-taṣdīḳ wa 'l-takdhīb*, i, 62).

The third stage in the evolution of the term *uṣūl* must have begun soon after Ibn al-Sarrādj, probably in tandem with early attempts to establish the principles of legal reasoning (*uṣūl al-fiḳh* [*q.v.*]). We must observe at once that the very title of Ibn al-Sarrādj's book, "The book of basic principles *in* grammar", *fī 'l-naḥw*, confirms that it is not a work on theoretical or methodological issues. For this we have to wait until there is an identifiable discipline in which the principles can be applied, to be precise, *ṣināʿat al-naḥw* "the art of grammar", which we find no earlier than Ḳudāma b. Djaʿfar (d. 320-37/932-48 [*q.v.*]), who speaks of "the two arts of grammar and logic", *ṣināʿatay al-naḥw wa 'l-manṭiḳ* (*Naḳd al-shiʿr*, ed. Bonebakker, Leiden 1956, 95; the one reference to *ṣanʿa* in al-Farrāʾ is not strong evidence for the earlier existence of the concept, occurring as it does in the context of *maṣnūʿ*, see Kinberg s.v.). Within only decades of Ibn al-Sarrādj's death, we have proof that grammar was already being practised as an art with its own *uṣūl*: in the *Intiṣār* of Ibn Wallād (d. 332/943, see Sezgin, *GAS*, ix, 206-7), there is an absorbing debate about the fundamentals of grammatical methodology evoking several key terms and ideas. Framed as a defence of the "Baṣran" position against that of the "Kūfans", the passage vigorously rejects induction (*istiḳrāʾ*) as being no more reliable than mere supposition (*ẓann*), leading inevitably to contradictory results which corrupt the "foundations and principles of the art" *mabānī 'l-ṣināʿa wa-uṣūluhā* (Bernards, 75). The "Baṣrans", on the other hand, hold firmly to the unanimously accepted basic principles (*lazima 'l-baṣriyyūna 'l-uṣūl*, and later *al-uṣūl al-mudjtamaʿ ʿalayhā, ibid.*, 76); since these include the concept of abstract operators (*ʿawāmil maʿnawiyya*) and the axiom that one operator cannot operate on another, we can be sure that *uṣūl* here refers to the technicalities of grammatical science rather than (though at this early stage not wholly excluding) the observed regularities of Arabic discourse from which grammatical theories were derived.

It is this sense in which *uṣūl al-naḥw* (in contrast with Ibn al-Sarrādj's *uṣūl fī 'l-naḥw*) can finally be taken to be the analogue of the closely related science *uṣūl al-fiḳh*. This is certainly the understanding of Ibn al-Anbārī (d. 577/1181 [see AL-ANBĀRĪ]), whose *Lumaʿ al-adilla* plainly asserts and conscientiously defends the proposition that these two sciences are methodologically identical. This he does by transposing the process of grammatical reasoning entirely into the terminology of *fiḳh*, starting with the validity and transmission of linguistic evidence (with due attention to the case

of the single testimony), moving through the types of analogy, *ḳiyās*, and the rules of its application, and concluding with a number of subordinate procedures familiar from legal contexts such as *istiḥsān*, *istiṣḥāb al-ḥāl* and *istidlāl* [*q.vv.*] and conflicts of evidence and method.

Ibn al-Anbārī merely set the seal on a process which had begun much earlier, during the 4th/10th century, the period when the three-way interaction between lawyers, grammarians and philosophers was at its most intense, with the Muʿtazila acting as the yeast in this extremely powerful recipe (cf. Versteegh, 130 ff.). Already such figures as Ibn Fāris (d. 395/1004 [*q.v.*], also *GAS*, viii, 209-14, ix, 194) and his more prominent contemporary Ibn Djinnī (d. 392/1002 [*q.v.*], also *GAS*, ix, 173-82) had raised questions about the nature of grammar clearly reflecting the multidisciplinary background of their speculations. For Ibn Fāris, grammar was certainly a "science" (*ʿilm*, *Ṣāḥibī*, 81) and an art, *ṣināʿa* (*ibid.*, 31) with its own principles and derivatives, *uṣūl* and *furūʿ* (*ibid.*, 30), and likewise Ibn Djinnī (who knew Ibn al-Sarrādj's work) enthusiastically criticises and harangues other specialists in the *ṣināʿa* for their technical inadequacies. From Mehiri's helpful account of Ibn Djinnī we can select only one example of his views on the *uṣūl*: "The Arabs prefer homogeneity and similarity, and to base the derivative on the fundamental" (*al-ʿArab tuʾthir min al-tadjānus wa ʾl-tashābuh wa-ḥaml al-farʿ ʿalā ʾl-aṣl*: *Khaṣāʾiṣ*, i, 111; Mehiri, 133).

The final touch comes with the formal definition of grammar as "a science with principles (*uṣūl*) by which sound and corrupt speech can be known", as it is worded by ʿAlī b. Muḥammad al-Djurdjānī (d. 816/1413 [*q.v.*]), with an interesting alternative in which *uṣūl* is replaced by *ḳawānīn* "laws" (*Taʿrīfāt*, 125), reminding us of al-Fārābī's formulation in his *Iḥṣāʾ* (ed. A. Gonzáles Palencia, Madrid 1932, 10). Later, it became a widespread custom to begin works of grammar with some version of this definition.

There remain problems of interpretation and obscurities still to be clarified, especially the overlap in meaning between *aṣl* and a number of other terms such as *wadjh, ḥadd, ḳiyās* (*q.v.*, and cf. Baalbaki, 167) and *ʿilla* (*q.v.* and cf. Ibn Djinnī, *Khaṣāʾiṣ*, i, 164, where a list of *ʿilal* is presented which might just as well have been called *uṣūl*). On the other hand, there is not much to be gained from equating *aṣl* and *farʿ* with the modern linguistic concepts "unmarked" and "marked" respectively (Owens, 199-222). Not every *aṣl*/*farʿ* pair can be explained in terms of markedness: it would be difficult to see in what way the non-existent **ḳawala* is "unmarked" in relation to *ḳāla* (the asterisk suggests that western convention in fact treats the unreal form as "marked") or what is "unmarked" about the vocative in Ibn al-Sarrādj's definition quoted above. As Owens himself admits (304 n. 261), the distinction between *aṣl* and *farʿ* is really one of logical hierarchies not of formal differences, but if that is the case, the alleged similarity between the Arab and western systems is defined out of existence. However, one can agree with Owens (246-8, though seemingly contradicting 223-4) that it would be unwise to see in the theory of *aṣl* anything more than a fortuitous and potentially misleading resemblance to "deep structure".

Finally, it is worth observing that *uṣūl al-naḥw* and *uṣūl al-fiḳh* may be closely related but are certainly not identical twins, in spite of Ibn al-Anbārī's attempt to unify the two sciences. In one way they are complementary: both have language as their input and correct action as their output, and the jurist's religious authority is reinforced by his grammatical expertise, just as the secular prestige of grammar derives from its fundamental role in legal speculation. In another way, however, the output of grammar is a subset of the output of *fiḳh*, for everything the pious Muslim says should ideally remain within the *Sharīʿa*: even language is a *sunna*.

UṢŪL AL-DĪN (A.), "the bases (or principles) of the [Muslim] religion".

Despite the symmetry of terms—which has given rise to an aberrant dual form, *al-uṣūlān*ⁱ, denoting equal competence in *fiḳh* and in *kalām*—the word *uṣūl* does not have the same sense in the two parallel expressions *uṣūl al-dīn* and *uṣūl al-fiḳh* [*q.v.*]. The latter, as is well known, traditionally represent the sources on which the jurist bases his judgement, and these are mainly the four as defined in the classical system: Ḳurʾān, *sunna* of the Prophet, *idjmāʿ* or consensus of the community, and *ḳiyās* or analogical reasoning. If this were equally the sense of the term *uṣūl* in the expression *uṣūl al-dīn*, the two formulae *uṣūl al-dīn*/*al-fiḳh* would be virtually synonymous. For the theologian goes back to exactly the same authorities to justify his interpretation of dogma except that, for his part, he usually divides them into two categories, making up what are for him the two great categories of *dalāʾil* "proofs": the *samʿiyya* or *sharʿiyya* "revealed" ones (Ḳurʾān, *sunna*, *idjmāʿ*), and the *ʿaḳliyya* "rational" ones. But the *uṣūl al-dīn*, in ordinary usage, represent something else: not the sources of theological judgement but, in some way, this judgement itself. These are the articles of dogma, the *ʿaḳāʾid* or "truths which must be believed", as the Muslim theologians understand them and argue about them according to their various orientations. Thus the science of *uṣūl al-dīn*

is another way of designating the *ʿilm al-kalām* [*q.v.*].

Here, e.g., is what al-Kh^w^ārazmī says in his *Mafātīḥ al-ʿulūm*, 39-41, about "the principles of religion about which the theologians (*al-mutakallimūn*) debate". He states, "First of all there is the affirmation of the generation of bodies (*ḥudūth al-adjsām*) and the refutation of the *dahriyya* who affirm the eternity of time (*dahr*). Then the demonstration that the universe has a creator (*muḥdith*), who is God Most High, and the refutation of those who strip God of His attributes (*muʿaṭṭila*). [The demonstration] that God is eternal, knowing, powerful and alive. [The demonstration] that He is unique, and the refutation of the dualists (*madjūs* and *zanādiḳa*), the trinitarians (the Christians) and all those who admit a plurality of creators. [The demonstration] that He does not resemble any things (*lā yushabbihu ʾl-ashyāʾ*), and the refutation of the Jews and other assimilationists (*mushabbiha*); [the demonstration] that He is not a body, contrary to what many of the Muslim assimilationists affirm—how high He is above all that! Then [the demonstration] that He is knowing, powerful, alive from the very fact of His essence (*bi-dhātihi*), or—as the great majority of the theologians think, except for the Muʿtazila—that He is knowing by a knowledge, alive by a life, powerful by a power, and that these attributes (*ṣifāt*) are co-eternal with Him.

"Then the question of knowing whether God is visible or not; whether His will is originated in time or eternal; whether His word is created or uncreated; whether human acts are produced by God or by men; whether [human] capacity (*istiṭāʿa*) is anterior to the action or contemporaneous with it; whether God wills men's evil actions; whether a person who dies guilty of a grave sin without having repented of it is destined for Hell in perpetuity or whether it is possible that God may forgive him. [In this connection,] the Muʿtazila say that [Muslims] guilty of a grave sin (*ahl al-kabāʾir*) are "evildoers" (*fussāḳ*) who are neither believers nor unbelievers, which is an "intermediate state" (*al-manzila bayn al-manzilatayn* [*q.v.*])—the other theologians state, on the contrary, that every person is necessarily either a believer or an unbeliever—and that [the Prophet's] intercession (*shafāʿa*) does not apply to these "evildoers", the other [theologians] asserting that, on the contrary, it applies to them and to them only.

"Then the demonstration of the reality of prophethood, *pace* the *barāhima* who deny its existence. The demonstration of Muḥammad's prophethood. Finally, the question of the imāmate, how one is to know who is fit to exercise it and who is unfit.

"These are the principles of religion concerning which the theologians dispute and on which they stand in opposition to each other. The other [theological questions] are either derived from these or are preliminary in regard to them".

The expression *uṣūl al-dīn* occurs in the titles of many treatises on *kalām*. One may merely cite, from the Ashʿarī viewpoint, the *K. Uṣūl al-dīn* of Abū Manṣūr al-Baghdādī [*q.v.*] and *al-Shāmil fī uṣūl al-dīn* of Abu ʾl-Maʿālī al-Djuwaynī [*q.v.*]; from the Ḥanafī-Māturīdī viewpoint, the *K. Uṣūl al-dīn* of Abu ʾl-Yusr al-Bazdawī (d. 493/1099) and the *Tabṣirat al-adilla fī uṣūl al-dīn* of Abu ʾl-Muʿīn al-Nasafī (d. 508/1114 [see AL-NASAFĪ. II]); from the Ḥanbalī viewpoint, *al-Muʿtamad fī uṣūl al-dīn* of the *ḳāḍī* Abū Yaʿlā [see IBN AL-FARRĀʾ]; and from the Muʿtazilī viewpoint, the work with the same title of al-Malāḥimī (d. 536/1141).

Bibliography: Given in the article. See also that to ʿILM AL-KALĀM. (D. GIMARET)

UṢŪL AL-FIḲH, a term which is a parallel to *furūʿ al-fiḳh*, the latter indicating "branches", while *uṣūl al-fiḳh* indicates "roots" of the law [see SHARĪʿA]. Both terms indicate an academic discipline and a literary genre. Works of *furūʿ* expound the norms of the law, while works of *uṣūl* are concerned with the sources of the law and the methodology for extrapolating rules from revelation. The literary genre of *uṣūl al-fiḳh* is continuous from the mid-4th/10th century (represented, notably, by the works of the Ḥanafīs, Aḥmad b. Muḥammad al-Shāshī, d. 344/955, and Aḥmad b. ʿAlī Abū Bakr al-Djaṣṣāṣ, d. 370/980) to the 13th/19th century. Given the developed form of the early works, it is clear that there was a prior tradition of teaching and study, a gradually emerging system for the classification and presentation of problems, and, at least, informal notebooks. The famous *Risāla* of Muḥammad b. Idrīs al-Shāfiʿī (d. 204/820) is frequently looked on as the earliest work of *uṣūl al-fiḳh* but the temporal gap between it and the later literary tradition has led modern scholars to question its influence, or its date (Hallaq, *Was al-Shāfiʿī...*; Calder, *Studies*, ch. 9). Extensive works of *furūʿ*, associated with different schools of law (*madhāhib*), emerged before works of *uṣūl* and included polemical defence of established rules. It is probable that the origins of *uṣūl* as a separate discipline are to be found in the development and refinement of polemical activity of this kind (Calder, *Studies*).

Works of *furūʿ* set out the norms of the law, in greater or lesser detail, and with varying quantities of justificatory argument. Works of *uṣūl* identify and classify the sources of the law, expound a methodology whereby these give rise to norms, and present a structure of authority which distinguishes the qualified jurist (*muftī*/*mudjtahid*) from the layman or *muḳallid*. Ideally, the discipline of *uṣūl* could be seen as a pure science presented in radical abstraction from normative detail. Al-Ghazālī [*q.v.*] (a Shāfiʿī) distinguished *uṣūl al-fiḳh* from *ʿilm al-khilāf* (the science of divergence), claiming that only the latter dealt with specific examples of norms and their relationship to revealed texts (*Mustaṣfā*, i, 5.5-7). According to him, the discipline of *uṣūl* was concerned to identify the sources of the law and the general hermeneutical principles which permitted extrapolation of norms from texts. This led naturally to a consideration of the nature and limits of the authority of the qualified jurist. The early Ḥanafī tradition was much less purist, more focused on the defence of acknowledged norms, though ultimately influenced by and convergent with the more abstract tradition. (Ibn Khaldūn identified these tendencies as that of the theologians and that of the jurists respectively; see below.)

The discipline of *uṣūl al-fiḳh* takes its place as one of a bundle of disciplines (or literary genres) which constitute the academic articulation of Islam. These were listed by al-Ghazālī as six: theology (*ʿilm al-kalām*), *furūʿ al-fiḳh*, *uṣūl al-fiḳh*, *ʿilm al-ḥadīth*, *ʿilm al-tafsīr* and *ʿilm al-bāṭin*. The last of these referred to the whole of the Ṣūfī tradition; the others are the major components of the scholastic and academic tradition of Islam. Al-Ghazālī described the science of *kalām* as the most general or universal (*ʿāmm*) of the religious sciences, the others being concerned with particulars (*djuzʾī*). The science of *kalām* established the basic principles (God's existence, the reality of prophets, the truth of their message, etc.) which serve as the ground for the other sciences. The *uṣūlī* (specialist in *uṣūl al-fiḳh*) accepts the results of the science of *kalām*, accepts too, in principle, the results of the science of *ḥadīth*, and expounds the way in which the Prophet's words

indicate juristic norms, whether by explicit or implied meaning or through intellectual analysis and deduction (*Mustaṣfā*, i, 5-6). For al-G̲h̲azālī, there were only three real sources—Book, Sunna, and Consensus (*id̲j̲mā*ʿ)—though many techniques and devices beyond these required discussion.

The standard contents of a work of *uṣūl* are exemplified in the *Mustaṣfā* of al-G̲h̲azālī, which represents a high point in the development of the S̲h̲āfiʿī tradition (a tradition which owed much to the Muʿtazila and to the Mālikī Abū Bakr al-Bāḳillānī (d. 403/1014), see Chaumont, *Bāqillānī*, and below on Ibn K̲h̲aldūn). Al-G̲h̲azālī's work brought the tradition to a peak of organisation and expression and was highly influential on subsequent works. After a brief, innovatory introduction on formal logic, he organised his material under four broad headings which he characterised by an elaborate metaphor as 1. the fruit, 2. the tree, 3. the method of harvesting, and 4. the harvester. The fruit is the juristic classification of human actions, centrally focused on the five *aḥkām* (sing. *ḥukm*—the juristic status of an act: mandatory, preferred, permitted, disliked, and forbidden), the categories of valid, null and defective, and other classificatory terms. The tree, meaning that which bears the fruit, refers to the sources. Al-G̲h̲azālī identified four of these, a primary group of three (Book, Sunna and Consensus), and the intellect. The workings of abrogation (*nask̲h̲*) and the difference between common report and isolated report (*tawātur, āḥād*) were a part of this section. Under the heading intellect, Al-G̲h̲azālī accepted only the principle of *istiṣḥāb al-ḥāl* meaning a presumption of continuity. He dismissed as invalid a number of other sources which, by other writers, were sometimes accepted: the opinion of the Companions, juristic preference (*istiḥsān* [*q.v.*], notably elaborated by the Ḥanafī tradition), public welfare (*maṣlaḥa* [*q.v.*]), and the consensus of the people of Medina (an exclusively Mālikī principle). In his section on the method of harvesting, al-G̲h̲azālī dealt with hermeneutical principles in three groups: 1. general principles of language and expression; 2. a theory of the explicit and the implicit; 3. juristic analogy (*ḳiyās*). Much of his material here was classified and discussed, following the established tradition, under simple antithetical headings: command and prohibition, general and particular, ambiguous and clarificatory, absolute and qualified, etc. In his last section, on the harvester, he dealt with *id̲j̲tihād* [*q.v.*]. The term means the exertion of the utmost possible effort to discover, on the basis of the sources and by rational use of hermeneutical methodology, a rule of law. The discovered rule remains, however, a product of informed opinion (*ẓann*), not knowledge (*ʿilm*). The qualifications, the task, and the authority of the *mud̲j̲tahid* were all a part of the discussion of this section.

This work effectively gathered and expressed all the major questions of the discipline of *uṣūl* and is fully representative of the tradition as a whole. It was a highly conservative tradition. There were of course different modes of expression, different preferences, elaborations, explorations and refinements of argument, but the academic tradition was unified and continuous throughout the centuries.

Ibn K̲h̲aldūn (ʿAbd al-Raḥmān b. Muḥammad, d. 808/1406 [*q.v.*]) offered in his *Muḳaddima* an illuminating account of the nature, origins and development of the science of *uṣūl*, an account which represents the educated view of his time and embodies much subtlety of observation and analysis. He identified the conventional four sources of the law as Book, Sunna, Consensus and *ḳiyās* (analogy). He stresses that, on balance, for details of the law, these permit only the establishment of a prevalent opinion (*g̲h̲ālib al-ẓann*), not real and definitive knowledge. The Ḳurʾān was established as a source by its miraculous quality and its sound transmission. The Sunna, established as a source by the practice of the Companions, was guaranteed by chains of transmission and classification of transmitters. Consensus, too, was established by the example of the Companions. The primary role of texts in the establishment of the law meant that certain principles of language were fundamental to hermeneutical technique, including knowledge of lexis, morphology, syntax, and broader rhetorical and epistemological principles. Many of the latter were classified, as we have seen, under simple antithetical headings: command and prohibition, etc. Finally, *ḳiyās* was valid because, with the emergence of new events, these had to be judged by similarities and parallels that linked them to known rules. For Ibn K̲h̲aldūn, the relatively late development of *uṣūl al-fiḳh* as a comprehensive science could be explained on the grounds that, for the earliest generations, the relevant skills were intuitive and innate (in respect of language and its use) or based on personal experience (in respect of assessing transmitters of *ḥadīt̲h̲*, etc.). The first work of *uṣūl al-fiḳh* was al-S̲h̲āfiʿī's *Risāla*.

Ibn K̲h̲aldūn went on to make his famous distinction between the *uṣūl* of the theologians and that of the jurists. The difference was essentially one of abstraction (*tad̲j̲rīd*): the theologians abstracted the principles and the rules of the science from their normative exemplification. The early landmarks of the theologians' tradition were identified by Ibn K̲h̲aldūn as follows.

1. The *K. al-ʿUmad* of the *ḳāḍī* ʿAbd al-D̲j̲abbār b. Aḥmad (Muʿtazilī, d. 415/1025 [*q.v.*]) and its commentary, the *Muʿtamad*, by Muḥammad b. ʿAlī Abu ʾl-Ḥusayn al-Baṣrī (436/1044).
2. The *K. al-Burhān* of al-D̲j̲uwaynī, Imām al-Ḥaramayn (d. 478/1085 [*q.v.*]).
3. The *Mustaṣfā* of al-G̲h̲azālī.
4. The *Maḥṣūl* of Muḥammad b. ʿUmar Fak̲h̲r al-Dīn al-Rāzī (d. 606/1209 [*q.v.*]).
5. The *Iḥkām* of ʿAlī b. Abī ʿAlī Sayf al-Dīn al-Āmidī (d. 631/1233 [*q.v.*]).

Beginning apparently with Muʿtazilī thinkers, this tradition was developed initially by S̲h̲āfiʿī/As̲h̲ʿarīs. The later development of the tradition included Mālikī, Ḥanbalī, and even Ḥanafī writers, their works taking the form for the most part of summary and commentary. The two standard textbooks of Ibn K̲h̲aldūn's time were the *Muk̲h̲taṣar* of Ibn al-Ḥād̲j̲ib (ʿUt̲h̲mān b. ʿUmar, a Mālikī, d. 646/1249) and the *Minhād̲j̲* of al-Bayḍāwī (ʿAbd Allāh b. ʿUmar, a S̲h̲āfiʿī, d. 685/1286 or 692/1293).

The jurists' tradition was essentially that of the Ḥanafīs. (This tradition should be seen as prior to and productive of the theologians' tradition. It is more focused on the rules of the law and the discovery of principles that justify the rules than on the abstract analysis of hermeneutical principles. This is probably how the discipline developed, emerging out of polemical defence of known rules.) Ibn K̲h̲aldūn isolated ʿAbd Allāh b. ʿUmar al-Dabbūsī (d. 430/1038) as the most important early writer in this tradition. His work and that of the other early Ḥanafīs was developed in particular by ʿAlī b. Muḥammad al-Bazdawī (d. 484/1089). Towards the end of the 7th/13th century, Aḥmad b. ʿAlī Ibn al-Sāʿātī (d. 694/1295), author of the famous *Mad̲j̲maʿ al-baḥrayn*, a work of *furūʿ*, combined, in his *K. al-Badīʿ*, the Ḥanafī (jurists') tradition with the tradition derived from al-Āmidī, thereby

ensuring considerable convergence of the two traditions in the subsequent period.

Ibn Khaldūn's survey offers only his assessment of highlights. Western scholarship has also attempted to analyse and characterise the tradition. The earliest significant work on *uṣūl* is Ignaz Goldziher's *Die Ẓâhiriten*. Much is contained also in the writings of Joseph Schacht, and something more fragmentary in studies by such as Robert Brunschvig, George Makdisi, Abdel Magid Turki, *et al.* The first to produce a large body of studies focused on *uṣūl* is Wael B. Hallaq, and he has been followed by younger scholars, notably Éric Chaumont. Majid Khadduri has produced a translation of al-Shāfiʿī's *Risāla*, Bernard Weiss a very useful paraphrase and commentary on Āmidī's *Iḥkām*, and Chaumont a French translation of the *K. al-Lumaʿ* by Ibrāhīm b. ʿAlī al-Shīrāzī (d. 476/1083) (with valuable introduction and bibliography). A useful guide to the topics of *uṣūl* is contained in Kamali, *Principles*. However, neither a comprehensive history of *uṣūl*, nor a clear analysis of its function, has been provided by Western scholarship, although the dissertation of Aron Zysow (see *Bibl.*) goes a long way in this respect.

Many of the works of the later tradition derive their value not from any novelty in what they have to say, but from virtuoso skills of linguistic expression, and from elaboration of subtleties. A notable example is the *Djamʿ al-djawāmiʿ* of ʿAbd al-Wahhāb b. ʿAlī Tādj al-Dīn al-Subkī (d. 771/1369 [see AL-SUBKĪ]). He describes his work as a condensation of his two commentaries, on the *Mukhtaṣar* of Ibn al-Ḥādjib, and the *Minhādj* of al-Bayḍāwī, with numerous additions. This condensation was in turn expanded in the commentary of Muḥammad b. Aḥmad al-Maḥallī (d. 864/1459 [*q.v.*]) (*Sharḥ Djamʿ al-djawāmiʿ*), and in the supercommentary (*Ḥāshiya*) of ʿAbd al-Raḥmān b. Djād Allāh al-Bannānī (d. 1198/1784 [see BANNĀNĪ. 7]). That pattern of summary, commentary, and supercommentary marks the importance of continuity, loyalty and repetition within the ongoing tradition. There was development: it is notable for example that the commentaries on the *Djamʿ* incorporate and explore the distinction between *idjtihād* in an absolute sense and *idjtihād fi 'l-madhhab* (meaning juristic development within the parameters of school loyalty, Mālikī, Shāfiʿī, Ḥanafī, etc.). But development was not necessarily the point of the tradition, and was not always acknowledged. The constant re-discovery and re-expression, from generation to generation, of the rules that permitted the deduction of law from revelation, was a community duty which had many of the qualities of a ritual. The re-enactment (re-appropriation) of what was known, of what was a permanent and inalienable part of the religious tradition, was a sufficient motive for the continuous study and re-writing of what was already written. A notable feature of the late commentaries is the foregrounding of linguistic form, and the incorporation of grammatical and rhetorical analysis into the texts. This is not a feature of *uṣūl* only but of all the scholastic disciplines; it suggests an acknowledgement that what begins in language (the language of revelation) ends only with a renewed discovery of language as the means to meaning.

Modern scholars (notably Wael B. Hallaq), and some of the earlier exponents of the indigenous tradition (including al-Ghazālī), have tried to present *uṣūl* as an ongoing method for the discovery and the development of rules, implying that it points to a capacity for change and evolution in the juristic tradition. In fact, in broad terms, and to a considerable extent in details, the norms of the law were known prior to and independent of the tradition of *uṣūl*. The historical reality was that most Muslims belonged, by virtue of family or geography, to one or other of the four *madhhabs* and clung to that *madhhab* by a loyalty that was ultimately acknowledged and termed *taḳlīd* [*q.v.*] (in spite of the many caveats that surrounded that word). Chaumont (*Ijtihād et histoire*) has shown that the theory of *idjtihād* is not developmental: it is concerned with the discovery of the law as an eternal and enduring truth. Ibn Khaldūn offered an illuminating comment on the real situation. In his discussion of the science of dispute, which he perceived as a sub-genre within the science of *uṣūl*, he noted that the rules of *uṣūl* were deductive (*li 'l-istinbāṭ*) only for the *mudjtahids* (by which he meant the founding fathers of the *madhhabs*). Later jurists used the hermeneutical skills and arguments of *uṣūl* in order to *preserve and defend* norms that had already been deduced and were accepted through *taḳlīd*. A more positive appreciation of *taḳlīd* had been developed in the writings of the Shāfiʿī Ibn al-Ṣalāḥ (ʿUthmān b. ʿAbd al-Raḥmān Abū ʿAmr, d. 643/1245 [*q.v.*]) and his follower al-Nawawī (Yaḥyā b. Sharaf Muḥyi 'l-Dīn, d. 676/1277 [*q.v.*]) (see Calder, *Al-Nawawī's typology*). *Uṣūl al-fiḳh*, in this tradition, was perceived as a means to re-create (re-experience) the processes of discovery that had been enacted by the founding Imāms.

Re-creation, re-discovery, re-experience: it is concern with repetition and defence of the known law, not concern with development, that most characterises—and most reveals the profound religious and cultural values of—the legal sciences of Islam, both *furūʿ* and *uṣūl*. The articulation of these values in modern scholarship and in modern Muslim thinking is problematic, largely because the concept of a law which is eternally valid is thought to be incompatible with the need for evolution and change in the modern world.

Alongside *uṣūl al-fiḳh*, there are two other genres of legal meta-discourse, the "maxims" and the "intentions of the law"; for these, see ḲAWĀʿID FIḲHIYYA and MAḲĀṢID AL-SHARĪʿA, in Suppl.

UṢŪL AL-ḤADĪTH (principles of *ḥadīth*) refers in a general way to the disparate disciplines the mastery of which distinguished a true scholar of *ḥadīth* [*q.v.*] from a mere transmitter. The term was never satisfactorily defined nor was it differentiated from similar ones like *ʿulūm* (or *ʿilm*) *al-ḥadīth*, *iṣṭilāḥ al-ḥadīth*, *muṣṭalaḥāt al-ḥadīth*, etc. It should be noted that the popular division of the study of *ḥadīth* into *riwāya* (transmission) and *dirāya* (intellectual appreciation), with the latter corresponding to the *uṣūl al-ḥadīth*, is problematic in the light of actual usage. The exact boundary between the supposedly complementary terms *riwāya* and *dirāya* was never agreed upon and there are instances of the term *ʿilm al-riwāya* being used as a synonym of *uṣūl al-ḥadīth*.

The study of *ḥadīth* generated an enormous literature, and many of the specific topics falling under the general rubric of *uṣūl al-ḥadīth* were treated monographically. However, the most representative works were those which attempted to summarise in a limited compass the entire spectrum of this material. The authors of these works sought to equip the student with sufficient knowledge to read the fundamental documents of the study of *ḥadīth* with a reasonable degree of comprehension. It was agreed that the first of these guidebooks was *al-Muḥaddith al-fāṣil bayn al-rāwī wa 'l-wāʿī* (Beirut 1971) of Ibn Khallād al-Rāmahurmuzī (d. *ca.* 360/971 [*q.v.*]), a judge and littérateur from Khūzistān. By way of justifying his effort, he refers to the oft-lamented tendency of students to become preoccupied with accumulating lines of transmission and collecting unusual *ḥadīth*. Traditionally, this was viewed as a distraction from the more important tasks of understanding and applying the *ḥadīth*, and even from learning to recite them properly. Al-Rāmahurmuzī's somewhat unsystematic presentation of the material resembles the discussions with which some earlier authors had prefaced their *ḥadīth* collections (e.g. Muslim's *Ṣaḥīḥ*) and their books on personality criticism (e.g. Ibn Abī Ḥātim al-Rāzī's *Kitāb al-Djarḥ wa 'l-taʿdīl*, Ibn Ḥibbān's *Kitāb Madjrūḥīn*).

It is difficult to generalise about the works in this genre produced in the next two centuries, as they differ in both form and content. Al-Ḥākim al-Naysābūrī [*q.v.*] placed great emphasis on terminological concerns and in his *Kitāb Maʿrifat ʿulūm al-ḥadīth* (Cairo 1937) attempted to improve upon al-Rāmahurmuzī by dividing the material into 52 categories which he called *nawʿ*s. Al-Khaṭīb al-Baghdādī [*q.v.*] was a towering figure in *uṣūl al-ḥadīth*. His efforts were distributed among a number of works, most notably his *Kitāb al-Kifāya fī ʿilm al-riwāya* (Ḥaydarābād 1357), *Taḳyīd al-ʿilm* (Damascus 1949) and *al-Djāmiʿ li-akhlāḳ al-rāwī wa-ādāb al-sāmiʿ* (2 vols., Kuwait 1981). The last of the major works of this era was *al-Ilmāʿ ilā maʿrifat uṣūl al-riwāya wa-taḳyīd al-samāʿ* (Cairo 1389/1970) of the judge ʿIyāḍ b. Mūsā [*q.v.*].

The later development of the genre was dominated by Ibn al-Ṣalāḥ al-Shahrazūrī [*q.v.*] and his *Kitāb Maʿrifat anwāʿ ʿilm al-ḥadīth* (printed numerous times), popularly known as the *Muḳaddima*. During his tenure as the first head of the Dār al-ḥadīth al-Ashrafiyya (opened in 630/1233) in Damascus, Ibn al-Ṣalāḥ set out to write a commentary on al-Ḥākim's book and in the end produced an independent composition. He drew heavily on earlier works and like al-Ḥākim he divided the material into *nawʿ*s, although he re-arranged them and increased their number to 65. He departed from the method of his predecessors by relying less on the verbatim transmission of material from earlier authorities. This greatly increased clarity of his presentation and allowed him to cover significantly more ground in roughly the same space. The material in the *Muḳaddima* falls into four basic groups:

(1) Terminology pertaining to the authenticity of the *ḥadīth* (*nawʿ*s 1-22). This includes the discussion of the three basic grades of *ḥadīth*—*ṣaḥīḥ* (sound), *ḥasan* (fair) and *ḍaʿīf* (weak)—and the other types of *ḥadīth* bearing special names.

(2) Guidelines for the collection, recording and transmission of *ḥadīth* (*nawʿ*s 23-8). This section, the longest of the book, covers the practical concerns of the student and teacher of *ḥadīth*, such as the different means of transmission and the words to be used to express them in the *isnād*.

(3) Characteristics of *ḥadīth* not directly bearing on their authenticity (*nawʿ*s 29-36), e.g. shortness of *isnād* (*ʿulūw*), rare words in the text, contradictions in significance, abrogation.

(4) Transmitters of *ḥadīth* (*nawʿ*s 37-65). Although fundamental issues such as the definition of the concept "Companion of the Prophet" are discussed here, the emphasis is on matters which might mislead an inexperienced student. These include transmitters bearing similar names who might be confounded and ambiguous gentilics which might lead the student to draw wrong conclusions about their bearer.

Ibn al-Ṣalāḥ's treatment of the topics making up these sections varies greatly in thoroughness. He covers some in the most minute detail while others he merely outlines and directs the reader to other works for further information. (Many of the specific matters addressed in the *Muḳaddima* are discussed elsewhere in this Encyclopaedia, see AL-DJARḤ WA 'L-TAʿDĪL and ḤADĪTH.)

The appearance of the *Muḳaddima* inaugurated a period of remarkable activity in *uṣūl al-ḥadīth*, and until the present century most of the subsequent literature has been based on Ibn al-Ṣalāḥ's book, either directly or at one remove or more. Several commentaries on it were produced, as well as numerous abridgments. The most famous of the latter was the *Alfiyya* of Zayn al-Dīn al-ʿIrāḳī (725-806/1325-1404), which reduced the contents of the *Muḳaddima* to 1,002 verses. These abridgments in turn often found commentators. There were at least eleven commentaries written on the *Alfiyya*, including one from the pen of its original author. Of the later works on *uṣūl al-ḥadīth*, the most interesting may be *Nuzhat al-naẓar* (Benares 1394/1974) of Ibn Ḥadjar al-ʿAsḳalānī [*q.v.*]—an expansion of his *Nukhbat al-fikar*, itself an abridgment of the *Muḳaddima*—due to its novel arrangement and its author's interesting insights into the subject-matter.

(E. DICKINSON)

UṢŪLIYYA (A.), lit. "those who go back to first principles", from *uṣūl*, sing. *aṣl* "root, basic principle" or, considered as a modern abstract noun formation, "the doctrine of going back to first principles".

1. In the legal parlance of classical Islam

More specifically, the term *uṣūliyya* is applied within the Twelver Shīʿī tradition [see ITHNĀ ʿASHARIYYA] to those of its adherents commonly identified as supporting application of the rationalist principles of jurisprudence—especially *idjtihād* [*q.v.*] to the revelation accepted by the Twelvers to interpret doctrine and practice during the occultation (*ghayba* [*q.v.*]) of the Imām (beginning in 260/873-4) and the division of the community into *mudjtahid*s and *muḳallid*s. The term Uṣūlī does not appear to have been used until the 6th/12th century, and then in conjunction with continuous resistance by the Akhbārīs or Akbbāriyya [*q.v.*] to the incursions of rationalism into Twelver jurisprudence.

The school's origins lay in the Buwayhid period, when the community came under attack from other Shīʿī and Sunnī groups, especially the Muʿtazila. The latter's attack on the Twelver dependence on revelation struck at the essence of the faith, since the doctrine of the Imāmate [see IMĀMA] hinged on acceptance of the Imāms' revelation as the source of definitive *ʿilm* [*q.v.*]. Such Imāmīs as al-Shaykh al-Mufīd Muḥammad b. Muḥammad al-Nuʿmān (d. 413/1022), his student al-Sharīf al-Murtaḍā ʿAlī b. Ḥusayn ʿAlam al-Hudā (d. 436/1044), and al-Shaykh al-Ṭūsī, Muḥammad b. Ḥasan (d. 460/1067), later known as Shaykh al-Ṭāʾifa, responded that the Sunnī rationalists' recourse to *ḳiyās* (analogy) [*q.v.*] and *idjtihād* did not produce *ʿilm* free from doubt and *ikhtilāf* [*q.v.*]. Genuine *ʿilm* derived from recourse to the Ḳurʾān, the *tawātur* (the traditions of the Imāms widely transmitted in succeeding generations), and Twelver *idjmāʿ* [*q.v.*]. Accepting the Imām's return as indefinitely postponed, however, these scholars evolved distinctive doctrines and practices for use over the longer term. In the process they incorporated elements of their opponents' jurisprudential methodologies, including recourse to *ʿaḳl* (rational knowledge) as a source of *ʿilm*.

Al-Ṭūsī, for example, specified that the *muftī* (the giver of a *fatwā* [*q.v.*]) was to be conversant with the Ḳurʾān, the *sunna*, and the Imāms' traditions. Although he rejected *idjtihād*, given its Sunnī associations, he required application of the Sunnī exegetical principles of jurisprudence to the revelation and the mastery of Arabic. In his writings on *uṣūl al-fiḳh* (principles of jurisprudence), *ḥadīth*, and *fiḳh* [*q.vv.*], al-Ṭūsī's arguments for and his application of rationalist analyses advanced the importance of deductive jurisprudence and its practitioners. Competence in rationalist jurisprudence presupposed the division of the community between jurist and layman, and the latter's regard for the rulings produced by the former. The Buwayhid-period Twelver rationalists made provision for such a distinction, even if they did not agree on the degree of the lay believer's *taḳlīd* to the *mudjtahid*.

These Imāmī scholars also promoted the role of the practitioners of rationalist jurisprudence in the community's practical affairs. Al-Ṭūsī ruled that attendance at Friday congregational prayer was mandatory in the presence of the Imām or his appointee—usually a reference to Imāmī *sufarāʾ* (sing. *safīr*, representative)—endowed the *faḳīh* with the authority of that appointee to lead these prayers, and required the prayer leader to possess *ʿaḳl* and ability in *fiḳh*. Al-Ṭūsī required the delivery of *zakāt* to the *fuḳahāʾ*, argued that the Imām had appointed the *fuḳahāʾ* to undertake the *ḳaḍāʾ* [*q.v.*] and the *ḥudūd* (legal punishments [*q.v.*] during the occultation, and denoted those permitted to exercise *ḳaḍāʾ* as those schooled in rationalist jurisprudence.

The Buwayhid-period rationalists also permitted an active relationship between the *fuḳahāʾ* and the established, non-Twelver political institution, albeit in the interests of spreading the faith and protecting the faithful.

Later rationalist scholars further promoted both rationalist jurisprudence and the authority of the *faḳīh* in matters of doctrine and practice. Al-Muḥaḳḳiḳ al-Ḥillī (d. 676/1277 [see AL-ḤILLĪ (2)] admitted that Twelver scholars had been practicing *idjtihād* "most often based on theoretical considerations not deduced from the literal meaning of the texts" (Madelung, *Authority*, 168; Calder, *Doubt*, 66-7). His student al-ʿAllāma al-Ḥillī (d. 726/1325 [see AL-ḤILLĪ (1)]) formally adopted *idjtihād* in certain areas of the law (a restriction described as *tadjziʾa* "specialisation"). Both elaborated on the skills required of the *faḳīh*. According to al-ʿAllāma, *sharāʾiṭ al-idjtihād* (the qualifications for exercising *idjtihād*) included mastery of Arabic, knowledge of *idjmāʿ*, mastery of the Imāms' traditions, proficiency in the *dalāʾil ʿaḳliyya* (the intellectual proofs), and expertise in the relevant exegetical terms. The *ʿāmmī* (the unqualified lay believer) was not to practice *taḳlīd* in relation to *uṣūl al-dīn*, but in the *furūʿ* (lit. "the branches", i.e. practical norms of the law) he was to exercise *taḳlīd* in relation to a *ḥukm* or decision reached by application of these skills. Al-ʿAllāma specified that neglect of such a decision constituted a sin, while the *mudjtahid* who reached an "erroneous"

decision having exercised these abilities in good faith was to be forgiven.

Both granted the *faḳīh* a pivotal role in the community's daily affairs, understanding him as the Imām's designated deputy in these areas. The *faḳīh* who had attained the *sharā'iṭ* was to undertake *ḳaḍā'* and had a role in the processes relating to the *zakāt*. Al-ʿAllāma permitted *al-faḳīh al-djāmiʿ li 'l-sharā'iṭ* ("the *faḳīh* who has attained the qualifications"), one of the earliest uses of this reference, to implement the *ḥudūd*; he also required the Friday prayer leader to possess the *sharā'iṭ*. Al-Shahīd al-Awwal (d. 786/1384 [see MUḤAMMAD B. MAKKĪ]) echoed this definition of the *sharā'iṭ*, ruled that *al-faḳīh al-djāmiʿ li 'l-sharā'iṭ* was to undertake *ḳaḍā'*, and supported the concept of "specialised" *idjtihād*. All permitted a wide degree of interaction between the *faḳīh* and the political institution.

Immediately following the Ṣafawids' [*q.v.*] establishment of Twelver Shīʿism in Persia, such Uṣūlīs as ʿAlī al-Karakī (d. 940/1534) and al-Shahīd al-Thānī (d. 965/1557 [*q.v.*]) elaborated the concept of *niyāba ʿāmma* (general deputyship to the Imām) and identified *al-faḳīh al-djāmiʿ li 'l-sharā'iṭ* as *nā'ib ʿāmm* (general deputy), who was delegated authority over the practical areas of the community's life. The *nā'ib khāṣṣ* was understood, if not always explicitly, to refer to the earlier *sufarā'*. Al-Karakī's defence of his association with the early Shāhs as that permitted between the *faḳīh/nā'ib* and claimants to the Imāmate, however, was disavowed by such Uṣūlī contemporaries as al-Shahīd al-Thānī, who rejected the Ṣafawid claim to any special relationship with the faith and avoided Ṣafawid territory.

In the next century, official patronage insured that Twelver centres in Arab ʿIrāḳ, the Gulf and Djabal ʿĀmil were eclipsed by such Persian centres as Iṣfahān. The latter attracted and sustained prominent Arab and Persian Twelver scholars and thereby permitted considerable development of both the Uṣūlī and opposition Akhbārī polemics. In his *Munyat al-mumārisīn*, ʿAbd Allāh al-Samāhidjī (d. 1135/1723) catalogued the nature of the disagreements between and within each group, giving perhaps the fullest exposition of the Uṣūlī doctrine as it had developed by this period. Uṣūlīs required the *mudjtahid* to master *kalām* (theology), *naḥw* and *taṣrīf* (Arabic syntax and morphology), *lughat al-ʿarab* (lexicography), *manṭiḳ* (logic), and the *uṣūl al-fiḳh al-arbaʿa* (the four fundamental sources of law). The latter comprised the Ḳur'ān, the *sunna*, *idjmāʿ* and *dalīl al-ʿaḳl*. Uṣūlīs divided the community into *mudjtahids* or *muḳallids*, permitting the former to err, and forbade *taḳlīd al-mayyit* (following the ruling of a dead *mudjtahid*). Al-Samāhidjī also recorded the presence of "extreme" Uṣūlīs dismissive of any recourse to the revelation and requiring expertise in fifteen rationalist disciplines, over and above "the six principal" ones. These "extreme" elements may have comprised those who argued that, as illegitimate rulers, the Ṣafawid shāhs were to be replaced by the *fuḳahā'*. By contrast, some "moderate" *mudjtahids* were portrayed as agreeing with some Akhbārīs on such issues as *idjmāʿ*.

In this period, Uṣūlīs continued to disagree on the extent of *taḳlīd*. Aḥmad b. Muḥammad al-Ardabīlī (d. 993/1585) offered strong support for *taḳlīd*. Like the Buwayhid rationalists, Ḥasan b. al-Shahīd al-Thānī (d. 1011/1602) held that *taḳlīd* was not incumbent concerning fundamental matters of the faith, but otherwise obligatory where the lay believer determined that his *muftī* had acquired the *sharā'iṭ*. Bahā' al-Dīn al-ʿĀmilī or Shaykh Bahā'ī (d. 1030/1631 [*q.v.*]) held that in matters of the *uṣūl al-dīn*, *taḳlīd* was "safer".

Uṣūlīs of the Ṣafawid period generally agreed that the lay believer was free to chose his own *mudjtahid*, based on personal assessment of the abilities of particular scholars. They disagreed over the division between "specialised" or "partial" *idjtihād* and *idjtihād muṭlaḳ* (absolute, or general *idjtihād*). Ḥasan b. al-Shahīd al-Thānī argued against "partial" *idjtihād* and for the authority of *al-mudjtahid al-muṭlaḳ*. Shaykh Bahā'ī endorsed such a division, as did Muḥammad Bāḳir al-Sabzawārī (d. 1090/1679). Al-Samāhidjī's reference to "partial" and "absolute" practitioners of *idjtihād* suggests that by the late 11th/17th century, this division was very nearly formalised.

The institutionalisation of this distinction facilitated the triumph of the Uṣūlī school over the Akhbārīs at the hands of such scholars as Muḥammad Bāḳir al-Bihbihānī (d. 1205/1791), known as al-Waḥīd, and the further differentiation of a clerical hierarchy by Muḥammad Ḥasan al-Nadjafī (d. 1266/1850) and, especially, Murtaḍā al-Anṣārī (d. 1281/1864). Their contributions allowed for the evolution of such concepts as that of *mardjaʿ-i taḳlīd* (the source of emulation [*q.v.*]), the rankings of *ḥudjdjat al-islām* and *āyatullāh* [*q.v.* in Suppl.], and, eventually, the principle of government by an expert in rationalist jurisprudence embodied in the term *wilāyat-i faḳīh*.

2. In modern Islamic theologico-political parlance

Since the middle to late 1970s, *uṣūliyya* has been in general use, first in the Arabic press and then in Arabic scholarly writings as well, as the equivalent of "fundamentalism". Earlier, e.g. as recently as in the writings of Rashīd Riḍā [*q.v.*], *uṣūlī* meant "a specialist in the science of the *uṣūl al-dīn* [*q.v.*] or, more predominantly, the science of the *uṣūl al-fiḳh* [*q.v.*]". In less formal Egyptian Arabic, Islamic "fundamentalists" are often called *islāmiyyīn*, *al-sunniyya*, or, in the singular, by terms like *ikhwangī* or *rāgil sunnī*. No matter how awkward the term "fundamentalism" may actually be, it is improbable that it will be replaced by a term like "revolutionary extremist neotraditionalist ultra-Islamic radicalism" (Marty and Appleby, *Fundamentalisms*, i, p. viii).

The word "fundamentalism" itself was coined around 1920 in the North American Christian milieu. It appears to have been derived from a series of pamphlets called *The fundamentals. A testimony to the truth*, published in America during 1909-15 (Lawrence, *Defenders*, 166; Barr, *Fundamentalism*, 2).

It is often argued, with great obstinacy, that fundamentalism is a typically Christian, Protestant phenomenon, hence the term is useless and even misleading when used in order to describe phenomena which take place in the world of Islam. Christian fundamentalism certainly differs in many ways from its Islamic (or Jewish) assumed equivalents. Nevertheless, several modern scholars suspect that the movements described as fundamentalist have a number of common characteristics.

Fundamentalism, it is often asserted since the late 1980s and early 1990s, reduces a religious tradition to a specific political ideology. This ideology is attractive to the politically excluded, who try to fight their way back to the centre of power by pleading that they simply want to implement neglected duties which their religion has imposed from old. In order to re-arrange the world in accordance with what they see as the will of God, they are ready to kill and to die. The belief in the literal inerrancy of the revealed scriptures is only a minor detail within the framework of the return of society and state to what God commands.

It can be argued convincingly that North-American Protestant fundamentalism is the religious continuation of the Southern Confederacy that in 1865 lost the American Civil War. After a political and military defeat in the Civil War the South nevertheless wanted to teach the modern North a lesson. The modern North had to learn about God's intentions with the universe—if not with the United States of America (see e.g. Bloom, *American religion*, 197). With the help of Christianity reduced to a religious ideology, the excluded managed to strike back at the dominating élites.

Religion was marginal in the world of the Zionist pioneers who built a Jewish state and society on Palestinian soil in the first half of the 20th century. Traditional Jewish piety and *halakha* were looked upon with disdain and sometimes even contempt. Religious Judaism hardly participated in the gradual putting-together of a modern Jewish state. It is Judaism reduced to an ideology which in the 1990s gives those who were formerly excluded the power and the motivation to strike back, and perhaps even to take over the whole state. Since, however, the exclusion of the orthodox is not absolute—they, after all, can vote and be elected—they do not have to go as far as the Muslim fundamentalists and can safely accept the existing structure of a state that was built by others as legitimate, as something they at a certain point in the future expect to take over.

Islamic fundamentalism can be interpreted in a similar way. In roughly the second quarter of the 20th century, the colonial powers left the Middle East, both under pressure from "the masses" and under pressure from the international situation that after the end of the Second World War did not make allowances for the continuation of British, French or other colonial régimes within the world of Islam. The former colonial rulers, however, did not hand over their power to the "masses", but to military élites. After the decolonisation process, the populations of the Middle East were almost completely prevented from playing the game of politics: no effective political parties were allowed to exist, and no elections that mattered were held.

Once they were independent from their former colonial masters, the governments in the Muslim Middle East put great effort into getting support from both sides in the Cold War. They looked to Washington and Moscow, but did not, however, look for support at home. Moreover, within their own territories they went far in annihilating all social networks, except, of course, family and religion. In such a world, opposition movements could not but be religiously inspired or else become an insignificant family affair. There were simply no other sources of ideas or recruits other than family or religion. In such a perspective, Islamic fundamentalism is an unprecedented attempt by the masses to re-enter the game, by force if necessary.

According to Ernest Gellner (d. 1995), the success of Islamic fundamentalism is largely due to the "contamination" of Islamic popular culture by the ideals of Islamic High Culture. According to him, an Islamist régime is nothing but a "political roof" which is put in place in order to protect and to implement the ideals of Islamic High Culture. According to others, no meaningful distinction can be made between Islam and Islamic fundamentalism: both want to rule and to implement the laws of Islam.

Islamic fundamentalists, in their own words, believe that "to carry out God's prescripts [is] an obligation for the Muslims. Hence, the establishment of an Islamic State is obligatory, because something without which something which is obligatory cannot be carried out becomes itself obligatory. If such a state cannot be established without war, then this war is an obligation as well. The laws by which the Muslims are ruled today are [not the laws of Islam but] the laws of Unbelief. The rulers of this age are [hence] in apostasy from Islam. An apostate has to be killed even if he is unable to carry arms and go to war".

('Abd al-Salām Faradj, one of Sādāt's assassins, quoted in Jansen, *Dual nature*, p. xvi).

Fundamentalists select a limited number of the precepts of their religion and make these absolute. Jewish fundamentalists see it as obligatory (not any longer as only recommendable) to live in the Holy Land, hence they want to remove all others from the sacred soil. Christian fundamentalists see everything connected with the end or the beginning of life as God's exclusive domain. Hence they reject philological exegesis of the story of the Creation as recounted in Genesis, and they fight abortion, euthanasia and contraceptives. Muslim fundamentalists want to see the *Sharī'a* applied by an Islamic government, and they have only a limited interest in the other aspects of Islam. If poverty, as some people believe, were to drive people to fundamentalism, its support would be even stronger than it is today.

USUMAN DAN FODIO [see 'uthmān b. fūdī].

USWĀN, conventionally Aswān, a town in Egypt situated on the eastern bank of the Nile (lat. 24° 05' N., long. 32° 56' E.).

1. Up to the 9th/15th century

Originally, it was a small town (Swēnet, Syene, Suan) facing the island of Elephantine, which was a much more important settlement in ancient Egypt. When the Muslim Arabs overran Egypt, the conquest of Upper Egypt [see al-ṣa'īd] was entrusted to 'Abd Allāh b. Sa'd [*q.v.*]. The Arabs fixed their camp at Suan, facing the Byzantine settlement of Elephantine. An expedition of 31/652 by 'Abd Allāh penetrated into Nubia [see al-nūba] but judged it prudent to withdraw, on the basis of the ancient *pactum*, now the *baḳt* [*q.v.*] or treaty, which envisaged non-aggression, freedom for merchants to circulate, and an annual tribute by the Nubians of slaves in return for the equivalent value in corn, wine, clothing and horses. Uswān then became the second military centre of Egypt after Fusṭāṭ [*q.v.*] with a governor of second rank responsible to the governor in Fusṭāṭ, and new contingents of Arab immigrants, mainly Ḳaysīs, from the Ḥidjāz.

The governors' role in Aswān was essentially to prevent incursions by the Nubians and to regulate the exchanges foreseen under the terms of the *baḳt*. In al-Mas'ūdī's time, the contingent of slaves due from the Nubians comprised 365 for the *bayt al-māl*, 40 for the governor in Fusṭāṭ, 20 for the governor in Uswān, five for the town's *ḳādī* and twelve for the twelve professional witnesses there (*'udūl*); for further details on the working out of this arrangement, see baḳt. The governor in Uswān had finally to keep guard against the Bedja [*q.v.*] nomads of the deserts between the Nile and the Red Sea, who sometimes acted in consort with the Nubians (certain of the Bedja were Christians), and Bedja incursions led to the construction of a wall round Uswān in 212/827. The governor was further responsible for the tracks between the river and the Red Sea and for the safety of the pilgrims' sea passage from 'Aynūna (near 'Aḳaba at the head of the Red Sea) and then by land to Uswān, and negotiated at Uswān a treaty of protection with the Bedja chiefs. A new factor was the rediscovery of gold mines in the Wādī 'Allāḳī to the southeast of Uswān; for details of the subsequent exploitation of this precious metal, extending over a century, see al-ṣa'īd.

Uswān was a lively centre in the 3rd/9th century, and scholars of Mālikī *fiḳh* and *ḥadīth* are mentioned there. After being for long only loosely attached to Lower Egypt, it gradually became more integrated within Egypt in general, with Uswān as a stage on the route from Fusṭāṭ to the Ḥidjāz. It flourished particularly under the early Fāṭimids, and it is from the first half of the 5th/11th century that the main surviving mausolea date. A feature of the period was the ascendancy in the Uswān region of Ḳaysī Arab tribes, with the chief of Rabī'a acquiring the title of Kanz al-Dawla (see on this process, al-ṣa'īd). Nāṣir-i Khusraw passed through the town in mid-century and mentions its fortifications and gardens, with everything animated by the departure of caravans for the Red Sea port of 'Aydhāb [*q.v.*]. From this time onwards, too, Uswān had a Jewish community. In the next century, however, al-Idrīsī's evidence shows that the trade of the Ḥidjāz had been deflected from the town, and only its commerce with Nubia remained. This change seems to have been connected with internal convulsions within the Fāṭimid caliphate when the vizier Badr al-Djamālī [*q.v.*] came to power, and Ḳūṣ [*q.v.*] became the administrative centre of the upper Ṣa'īd, attracting the Ḥidjāz trade and the pilgrim traffic.

The Ayyūbid period was one of peace for Upper Egypt with the Banū Kanz, the former Rabī'a, now dominating Uswān and the town gradually making the transition to Sunnism, although Shī'ism remained strong there. The Mamlūks resumed an activist policy towards Nubia in 671/1273 and 674/1275, and Uswān was raided by the Nubians. The Kanz al-Dawlas were more strictly controlled by the Mamlūks, but remained responsible for order in the region and seem to have received for this the revenues of Uswān as an *iḳṭā'*, so that they had a dominating influence in the town, which nevertheless continued to decline, its three *madrasas* serving strictly local needs. With the revolt of the Ḳaysī tribes, including the Kunūz, as they are now termed, in 767/1365-6, the balance there was upset; the latter lost their *iḳṭā'* of Uswān, and a Mamlūk governor was now appointed there. For the remainder of the century, Uswān was frequently attacked and sacked by the tribes, with the last Mamlūk governor appointed in 801/1399. The ensuing crisis of the Mamlūk state removed Uswān from the control of Cairo [see al-ṣa'īd], and al-Maḳrīzī recorded for the year 815/1412-13 that Uswān no longer existed, with no governor, notables, markets or houses. In the course of the century, the Mamlūks sent expeditions in the hope of re-establishing control in Upper Egypt, without lasting effect. Egypt's southern frontier was now Kōm Umbū, and one can conclude that mediaeval Uswān disappeared at the opening of the 9th/15th century.

Bibliography: There are many bibliographical references in J.-Cl. Garcin, *Un centre musulman de la Haute-Egypte médiévale: Qūs*, Cairo 1976. On the architecture and epigraphy of Uswān during this period, see Creswell, *The Muslim architecture of Egypt*, i, Oxford 1952, and 'Abd al-Rahman 'Abd al-Tawab, revisions of and notes on S. Ory, *Stèles islamiques de la nécropole d'Assouan*, 3 vols. Cairo 1977-86.

(J.-Cl. Garcin)

2. The post-1500 period

Uswān passed under Ottoman control at an unknown
date, as a base in the province of Asyūṭ for raids into Nubia, Selīm I having been content to leave Upper Egypt in the hands of the Hawwāra tribesmen. Towards the mid-16th century, the expansion of the Fundj [*q.v.*] kingdom there was seen as a threat not only to Upper Egypt but also to the still-fragile Ottoman hold on the Red Sea Coast at Sawākin and then Maṣawwaʿ [*q.vv.*]. *Pace* Ewliyā Čelebi's information, it was not 945/1538 when Özdemir Pasha [*q.v.*] left for the conquest of Nubia, on his return from Süleymān's naval expedition against the Portuguese in India, but some twenty years later, when in 962/1555 he attempted to penetrate into Nubia from Uswān, and some years later, certainly before 1567, all the region south of the town up to the Third Cataract passed under Ottoman control, becoming a new *sandjak* with Ibrīm as its chef-lieu. However, in the last quarter of the century the Ottomans changed the administrative structure of the region on several occasions, reflecting their need to strengthen it as a source of manpower and provisions for the garrisons in Sawākin and Maṣawwaʿ of the *eyālet* of Ḥabesh. The Ṣaʿīd Aʿlā (sc. the region between Ḳinā and Uswān) was attached to the *sandjak* of Ibrīm, then briefly in 1573 was attached to the *wilāyet* or Ḥabesh; finally, in 992-3/1584-5, Nubia and the southern part of Upper Egypt became a separate province before passing once again under the Pasha of Cairo's control.

In the course of the 17th century, the decline of the Ottoman presence in the southern Red Sea region and the waning of the threat from the Fundj marginalised the *sandjak* of Ibrīm, and at an unknown date, Uswān was detached from it. When Ewliyā was there in 1083/1672, the office of *kāshif* there was granted out by the governor of Upper Egypt for 40 purses, and there was a *ḳāḍī* in the town at the head of a *ḳaḍā*ʾ. In the early 18th century, the Hawwāra, all-powerful in Upper Egypt at that time [see AL-ṢAʿĪD], exercised their influence over the town, in alliance with the Arabised Bedja tribe of the ʿAbabda. Militarily, Uswān remained an important post with a usual garrison of 150 to 200 Janissaries in its citadel under their *agha*. Commercially, however, it now played only a marginal role, away from all the important routes, and in 1672 Ewliyā was struck by the absence there of any caravanserai, permanent shops, public bath or *maktab* for children. Its commercial influence was seen only in a weekly market for local villagers, and on the evidence of Sicard in 1720, a barter rather than a monetary economy was dominant there. But a certain liveliness developed in the course of the century from the transit trade borne from Nubia towards Cairo, since the First Cataract, immediately to the town's south, was not impassable for boats, although there was still a preference for unloading goods and transporting them a short distance along the rapids.

According to the surveys of the scholars attached to Bonaparte's Egyptian expedition, the town stretched along the Nile and extended over a rectangle 750 m/2,460 feet by 250 m/820 feet, with its houses built of mud brick, its citadel on the south side with mud walls, and beyond this last the ruins of the ancient and mediaeval town stretching over a vast space enclosed by granite walls. After October 1820, with Muḥammad ʿAlī's conquest of Sinnār and Kordofān, Uswān recovered its pre-Ottoman period strategic role and also became an important commercial centre for trade with the Sudan. At the 1898 census, it had a population of 13,000 and a garrison of 781 troops. In 1902 the British completed construction of the first Nile barrage just above the First Cataract. This has now since the late 1960s constituted the head of Lake Nasser, the Egyptian part of the Aswan High Dam project jointly undertaken by Egypt and the Sudan; the project required resettlement of 90,000 Egyptian fellahin from the region to the south of Uswān, most of them to a new settlement at Kōm Umbū 52 km/30 miles north of the town. Modern Uswān is the chef-lieu of the southernmost *muḥāfaẓa* or governorate of Egypt, with industries and commerce and a university of its own; in 1970 the population of the town was 206,000.

USYŪṬ [see ASYŪṬ].

ʿUṬĀRID, the planet Mercury, Pers. *Tīr*, also called *al-Kātib* in Andalusian and Maghribī sources (see C.A. Nallino, *al-Battānī, Opus astronomicum*, Milan 1903, i, 291).

1. *Mercury's position, geocentric distance and size.* Islamic astronomers usually follow the Ptolemaic order of planetary spheres and place Mercury in the second, counted from the centre of the Universe, between the sphere of the Moon and that of Venus which is, in its turn, followed by that of the Sun. This order was discussed in al-Andalus in the 12th century by Djābir b. Aflaḥ [*q.v.*], who established that the Ptolemaic models must produce transits of Mercury and Venus on top of the solar disc and that, as these transits had never been observed, these two planets should be placed between the spheres of the Sun and Mars. This is confirmed by the fact that Mercury and Venus have no perceptible parallax even though, in the Ptolemaic order, they are nearer the Earth than the Sun, which does have parallax (R. Lorch, *Arabic mathematical sciences*, Variorum, Aldershot 1995, no. VI). Djābir's reference to the lack of transits implies that he was not aware of the presumed observations of such phenomena (probably sun-spots) made by a nephew of Ibn Muʿādh al-Djayyānī *ca.* 460/1068 (as reported by Ibn Rushd) and by Ibn Bādjdja (as reported by Ḳuṭb al-Dīn al-Shīrāzī) (B.R. Goldstein, *Theory and observation in ancient and medieval astronomy*, Variorum, London 1985, no. XV). The problem attracted the attention of al-Biṭrūdjī [*q.v.*], who explained the lack of visible transits by stating that both Mercury and Venus are self-luminous and cannot thus obscure the Sun under any circumstances (Goldstein, *al-Biṭrūjī: on the principles of astronomy*, New Haven and London 1971, i, 125, ii, 319). Concerning planetary order, al-Biṭrūdjī, like Muʾayyad al-Dīn al-ʿUrḍī (d. 664/1266) although for different reasons, placed Mercury below the sphere of the Sun and Venus above it (Goldstein, *Biṭrūjī*, i, 124 ff., ii, 315-21; G. Saliba, *The astronomical work of Muʾayyad al-Dīn al-ʿUrḍī, a thirteenth century reform of Ptolemaic astronomy. Kitāb al-Hayʾa*, Beirut 1990, 59-61, 303).

The interest in planetary distances appears at an early stage and Yaʿḳūb b. Ṭāriḳ wrote *ca.* 161/777-8 a *Tarkīb al-aflāk* in which he established the minimum (60 20/21 terrestrial radii), and maximum (251 3/7

t.r.) geocentric distances of Mercury, the diameter of the planet being 4 16/21 t.r. (D.A. Pingree, *The Fragments of the works of Yaʿqūb b. Ṭāriq*, in *JNES*, xxvii [1968], 106). The main source used by Islamic astronomers for this topic was, however, Ptolemy's *Planetary hypotheses* (see N. Swerdlow, *Ptolemy's theory of the distances and sizes of the planets*, unpublished doctoral diss., Yale Univ. 1968), in which Mercury's distances are 64 t.r. (min) and 166 t.r. (max), the diameter being 1/27 of the terrestrial diameter. In this work Ptolemy establishes his planetary distances on the basis of the rounded—and, in the case of Mercury, revised—values of the parameters of the *Almagest*, and later astronomers often tried to achieve more accurate results by using the precise Ptolemaic parameters established in this latter book. This explains the frequent appearance of 64;10 t.r. for the minimum distance and the fact that al-Farg͟hānī [*q.v.*], who apparently did not know the *Hypotheses*, gives 167 t.r. as the maximum distance, which becomes 169;46 t.r. in al-Bīrūnī's *Tafhīm* and 170;23 t.r. in *al-Ḳānūn al-Masʿūdī*. As for the diameter of the planet, it is 1/28 t.d. in al-Farg͟hānī and Ibn Rusta [*q.v.*]. These small corrections are found in authors who follow Ptolemy's method for the computation of planetary distances and sizes; only al-ʿUrḍī introduced modifications, suggesting for Mercury's a shortest distance of 64;28 t.r., a greatest distance of 206;58 t.r. and a diameter of about 1/23;31 t.d. (Goldstein and Swerdlow, *Planetary distances and sizes in an anonymous Arabic treatise preserved in Bodleian Ms. Marsh 621* in *Centaurus*, xv [1970], 135-70; *K. al-Hayʾa*, ed. Saliba, 297-313).

2. *Ptolemy's Mercury model in Islamic astronomy.* For the computation of Mercury's longitude, the Indian astronomical tradition represented by the *zīd͟j* of al-K͟hʷārazmī [*q.v.*] uses the equivalent of an eccentric deferent and an epicycle, with no equant (O. Neugebauer, *The astronomical tables of al-Khwārizmī*, Copenhagen 1962, 23, 29-30, 100). The Ptolemaic model is far more complicated and one of its main characteristics is that the centre of Mercury's deferent rotates on a small circle (radius 3^P in the *Almagest*, 2;30^P in the *Hypotheses*), called the "director" (*mudīr*) in later Arabic sources. Ptolemy's model therefore implies a non-circular deferent which was identified as an ellipse by the Toledan astronomer Ibn al-Zarḳālluh [see AL-ZARḲĀLĪ], who used this curve for practical purposes in his treatise on the construction of the equatorium (W. Hartner, *Oriens-Occidens*, i, Hildesheim, 1968, 465-78; J. Samsó and H. Mielgo, *Ibn al-Zarqālluh on Mercury*, in *Jnal. for the Hist. of Astronomy*, xxv [1994], 289-96). This idea reached the Mas͟hriḳ, for it reappeared in the *Taʿdīl hayʾat al-aflāk* written by Ṣadr al-S͟harīʿa in 747/1347 (A.S. Dallal, *An Islamic response to Greek astronomy*, Leiden 1995, 120-1), while al-Kās͟hī (d. 832/1429), also in a treatise on the equatorium, uses two intersecting arcs of a circle as an approximation to an ellipse (E.S. Kennedy, *The Planetary Equatorium of... al-Kāshī*, Princeton 1960, 40-1, 170-2). In spite of this development, Ptolemy's model and parameters predominated in Islamic astronomy until the 7th/13th century even though Ibn al-Hayt͟ham [*q.v.*] made a harsh criticism of Ptolemy's method for establishing the eccentricity of Mercury (*Almagest* IX, 9) in a very obscure passage in his *S͟hukūk ʿalā Baṭlamyūs* (ed. A. Sabra and N. Shehaby, Cairo 1971, 29-34). In this respect we can only mention a small correction, made by Ibn al-Zarḳālluh, of the Ptolemaic eccentricity (2;51,26^P instead of 3^P), although W. Hartner (*Oriens-Occidens*, ii, Hildesheim 1984, 292-312, 316-25) believed that it derived from the new parameter used by Ptolemy in his *Hypotheses*. There was, however, an awareness of the fact that Mercury's apogee, as determined by Ptolemy (190° for *ca.* A.D. 130), was incorrect by some 30°, and a far better position appears in al-K͟hʷārazmī's *zīd͟j* (224;54° for the time of the Hid͟jra). Ibn al-Zarḳālluh's calculated positions of Mercury, for a cycle of 46 years, in his *Almanac* imply a longitude of the apogee of about 210° (Kennedy *et al.*, *Studies in the Islamic exact sciences*, Beirut 1983, 502-10); one may wonder whether this parameter is related to the 212;52° given by Ibn al-Shāṭir for the Hid͟jra (Kennedy, *Studies*, 58). Ibn al-Zarḳālluh also wrote a treatise *On the invalidity of Ptolemy's method to obtain the apogee of Mercury*, which is mentioned by Ibn Bād͟jd͟ja (d. 533/1139) (D͟jamāl al-Dīn al-ʿAlawī, *Rasāʾil falsafiyya li-Abī Bakr b. Bād͟jd͟ja*, Beirut-Casablanca 1983, 77-8). Although this text has not been preserved, the topic attracted the attention of Andalusian astronomers of the 6th/12th century, for D͟jābir b. Aflaḥ deals with it in detail in the seventh *maḳāla* of his *Iṣlāḥ al-Mad͟jisṭī*; Ptolemy obtained an approximate, not an exact, determination of Mercury's apogee because he did not understand the geometrical characteristics of his model properly and thus his choice of observations was inadequate. Finally, although Ptolemaic theory considered that Mercury's apogee—like that of the rest of the planets—was displaced with the motion of precession, the Andalusian-Maghribī group of *zīd͟j*s which appear between the 6th/12th and the 8th/14th centuries [see ZĪD͟J] consider that the apogees of Mercury and Venus, at least, are kept at a fixed sidereal distance from the solar apogee and are thus affected by a motion discovered by Ibn al-Zarḳālluh for the apogee of the Sun (1° in every 279 Julian years) [see S͟HAMS; J. Samsó and E. Millás, *The computation of planetary longitudes in the* zīj *of Ibn al-Bannāʾ*, in *Arabic Sciences and Philosophy*, viii [1998], 265-70).

3. *Non-Ptolemaic Islamic models.* The model for Mercury in the *Almagest* was reinterpreted in three dimensions, with spheres instead of circles, by Ibn al-Hayt͟ham in his *Fī hayʾat al-ʿālam* (T. Langermann, *Ibn al-Haytham's On the configuration of the world*, New York and London, 1990, 47-54, tr. 168-92). This attempt, however, failed to give an adequate representation of the motion of Mercury and Venus in latitude, and Ibn al-Hayt͟ham dealt again with this second problem in two later works (A.I. Sabra, *Ibn al-Haytham's Treatise. Solution of difficulties concerning the movement of Iltifāf*, in *Jnal. for the Hist. of Arabic Science*, iii [1979], 388-422). The same author began, in his *S͟hukūk*, the trend of Islamic criticisms of Ptolemaic models because they did not agree with physical reality and did not respect the principle of explaining planetary motions by the combination of uniform circular motions that take place around the centre of each circle. Mercury's equant—the point around which the centre of the planet's epicycle moves uniformly and which is different from the centre of the deferent—was unacceptable on physical grounds, and a series of new, non-Ptolemaic, models for the planet were created from the 7th/13th century onwards (Saliba, *Arabic planetary theories after the eleventh century AD*, in R. Rashed, *Encyclopedia of the history of Arabic science*, i, London 1996, 115-25). Evidence confirms that this kind of creative trend was still alive in the 11th/17th century (Saliba, *A history of Arabic astronomy. Planetary theories during the golden age of Islam*, New York-London 1994, 47 n. 54, 288). These highly original models tried to solve the two problems which affected the planet's motion in longitude: that of the equant, which Mercury shares with

the rest of the planets, and the fact that Mercury's deferent moves with equal motion around a point which is not its own centre. The solutions were not easy, and Naṣīr al-Dīn al-Ṭūsī acknowledged his failure to create a valid alternative to the Ptolemaic model for Mercury (F.J. Ragep, *Naṣīr al-Dīn al-Ṭūsī's memoir on astronomy*, i, New York 1993, 208-9). Five successful alternative models have been adequately studied. Only Ibn al-Shāṭir may have used a new observation for his model; the rest have the same empirical basis as the *Almagest*.

(a) Al-'Urḍī made a very limited modification of the Ptolemaic tools; an adequate combination of the velocities and directions of the two motions implied allow him to keep the rotation of the centre of the epicycle around the centre of the deferent which, in its turn, rotates on the small "director" circle, as in the *Almagest*. Al-'Urḍī thus gets rid of the equant and obtains a position of the centre of the epicycle which varies only slightly from that of Ptolemy (*K. al-Hay'a*, 58-9, 235-8, 246-59).

(b) Ḳuṭb al-Dīn al-Shīrāzī takes a step forward and gets rid both of the equant and of the "director" circle by using two new mathematical tools provided by his predecessors: "al-'Urḍī's lemma" and the "al-Ṭūsī couple". The latter shows how a combination of two circular uniform motions may result in a rectilinear motion. Al-Shīrāzī's Mercury model replaces the Ptolemaic machinery by five supplementary epicycles which include two al-Ṭūsī couples. The resulting combination of their motions is equivalent to the crank-like mechanism of Ptolemy's "director" circle, but the resulting curve traced by the centre of the epicycle on which Mercury rotates is not the Ptolemaic ellipse but an oval pressed in at the waist which, as in the case of Ptolemy's model, produces two perigees at a distance of *ca.* 120° from the planetary apogee (E.S. Kennedy, *Studies*, 92-4).

(c) Combinations of epicycles also provide another solution for the longitude of Mercury in Ibn al-Shāṭir's *Nihāyat al-su'l*: this author uses the combination of the motion of six spheres, of which the two last ones form an "al-Ṭūsī couple" which has the effect of enlarging and reducing the size of Mercury's epicycle in the same way as Ptolemy's "director" (Kennedy, *Studies*, 59-61). Ibn al-Shāṭir's model is the first and only known one in which the starting point of all motions is the centre of the Universe and not a point displaced from it in the apse line; he is the first to use his own planetary models (including the model for Mercury) to compute a new set of non-Ptolemaic tables, *al-Zīdj al-djadīd* (Kennedy, *Studies*, 492-9); finally, Ibn al-Shāṭir's model for Mercury is the same described by Copernicus both in his *Commentariolus* and in the *De Revolutionibus*.

(d, e) The *Ta'dīl hay'at al-aflāk* of Ṣadr al-Sharī'a and an anonymous work attributed to 'Alā' al-Dīn Ḳūshdjī describe two related models for Mercury which seem to represent a step backwards; strongly influenced by al-Shīrāzī's lunar model, they use, like Ptolemy, an eccentric deferent and a "director" sphere. Ṣadr al-Sharī'a succeeds in making the motion of the centre of the epicycle uniform around the centre of the "director", while the motion of the deferent on which it travels is also kept uniform around its own centre. An additional epicyclet carries the centre of the planet-carrying epicycle and produces the changes in the size of the latter required by Mercury's motion (Dallal, *Islamic response*, 119-33, 389-98). As for al-Ḳūshdjī, he uses two epicyclets to regulate the motion of Mercury's epicycle.

4. *Mercury in Islamic astrology*. Mercury has its domicile (*bayt*) in Virgo (by day) and Gemini (by night), while its detriment (*wabāl*) corresponds to the opposite signs (Pisces and Sagittarius). During the night it dominates the triplicity (*muthallatha*) of air formed by Gemini, Libra and Aquarius, in spite of the fact that its nature is moderately dry and cold (which corresponds to the earthly signs). Its exaltation (*sharaf*) takes place in Virgo 15° and its dejection (*hubūṭ*) in the opposite degree (Pisces 15°). It is a planet of ambiguous influence: according to al-Bīrūnī (*Tafhīm*, ed. R.R. Wright, London 1934, 233) when left alone it is inclined to beneficence, but when it is near another planet it intensifies its good or bad influences; it is either diurnal or nocturnal, depending on the sign in which it is or the planet with which it is associated; its sex (male or female) also depends on such associations. This explains why al-Ḳazwīnī (*Āthār al-bilād*, ed. Wüstenfeld, Göttingen 1849, i, 22) states that the astrologers called it *munāfiḳ* (hypocritical). Abū Ma'shar (*al-Madkhal al-kabīr*, ed. R. Lemay, iii, Naples 1995, 391-2) states that, according to the Persians, Mercury dominates the sixth climate, while the Greeks give it the third climate. Al-Bīrūnī (*Tafhīm*, 242) states that Mecca, Medina, 'Irāḳ, Daylam, Gīlān and Ṭabaristān are the places submitted to the influence of the planet. A detailed list of the indications given by Mercury's influence, many of which are related to science, culture and intellectual activities, can be found in Abū Ma'shar's *al-Madkhal al-kabīr* (iii, 555).

Bibliography: Given in the article.

(J. Samsó)

'UṬĀRID b. Muḥammad al-Ḥāsib ("the calculator") al-Munadjdjim ("the astrologer"), mathematician, astronomer and astrologer who apparently lived in the 3rd/9th century. He wrote various works in the fields of his expertise, including one on the use of the astrolabe and *al-Zīdj al-kāfī*, which are now lost, although they were known to scholars like al-Bīrūnī and 'Abd al-Raḥmān al-Ṣūfī. A work on burning mirrors, *K. fi 'l-Marāyā al-muḥriḳa*, and another on mineralogy, the *K. Khawāṣṣ al-aḥdjār*, do, however, survive.

'UTAYBA, a great and powerful Bedouin tribe of Central Arabia, second only in importance to the 'Anaza or 'Unayza [*q.v.*], and playing a significant role in the history of Arabia in the last 150 years or so. Doughty describes them as having pasture grounds extending from al-Ṭā'if [*q.v.*] in the Ḥidjāz in the west to al-Ḳaṣīm [*q.v.*] in northern Nadjd in the east.

The name appears in various renderings in the travel accounts of Europeans, e.g. the 'Ateyba, pl. el-'Ateybân of Doughty, and the 'Oṭeybah of Palgrave; according to J.J. Hess, the modern pronunciation used by the 'Utayba themselves is 'Ötēbe, pl. 'Ötbān.

The name 'Utayba (in form a diminutive of 'Utba) is applied in the older literature not to a tribe (the only isolated instances are several times in Ibn 'Abd Rabbihi, *'Iḳd*, Cairo 1316, iii, 61, the variant Banū 'Utayba alongside of 'Uyayna as belonging to the Yarbū' b. Ḥanẓala) but to persons, of whom the three best known deserve at least a brief mention: 'Utayba b. al-Ḥārith b. Shihāb al-Yarbū'ī, known as *Ṣayyād al-Fawāris*, one of the most celebrated heroes of the pre-Islamic wars of the Tamīm against the Bakr (see

on him Caskel and Strenziok, *Ğamharat an-nasab*, i, Table 69, ii, 577); ʿUtayba b. al-Nahhās al-ʿIdjlī, general and representative of al-Muthannā b. Ḥāritha who, among his other victories, defeated the Taghlib [*q.v.*] at Ṣiffīn in 14/636; and lastly, ʿUtayba b. Abī Lahab, who married Muḥammad's daughter Umm Kulthūm (cf. F. Wüstenfeld, *Register*, 366-7; Ibn Durayd, *Ishtiḳāḳ*, ed. Wüstenfeld, 42, 138, 208, 215; Ibn Ḳutayba, *Maʿārif*, ed. Wüstenfeld, 37, 60-1; 70; al-Ṭabarī, i, 2206-8; Ibn al-Athīr, ii, 343-4).

The ʿUtayba trace their genealogy back to Muḍar and claim to belong to the Ḳays ʿAylān [*q.v.*] (Doughty, *Travels in Arabia Deserta*, ii, 355, 367; the statement made by al-Ālūsī, *Taʾrīkh Nadjd*, Cairo 1343/1924-5, 88, that they belong to the Ḳaḥṭān is due to a confusion with the Banū ʿUtba or ʿAtīb; cf. al-Ḳalḳashandī, *Nihāyat al-arab*, Baghdād 1332, 285 with al-Suwaydī, *Sabāʾik al-dhahab*, Bombay 1296, 45). They are divided into two main groups: the Ruwaḳa (in form like Ruwala [*q.v.*]: see Nöldeke, in *ZDMG*, xl [1886], 182; also Rawaḳa [*nisba*: Rawḳī] and Rūḳa) and the Barḳa (Baraḳa [*nisba*: Barḳāwī], also Barḳā). Their further subdivision is very variously given: Snouck Hurgronje, *Mekka*, i, 197, divides the Rawaḳa into 6, the Baraḳa into 10 tribes, the *Handbook*, i, 69 into 11 or 18 clans, while Fuʾād Ḥamza, *Ḳalb djazīrat al-ʿArab*, 179-82, distinguishes three or four *fakhdh*s with a number of *ʿashīra*s and *ʿāʾila*s; of all these, the names of which vary much in detail, we need only mention the Thibata (Dhawī Thubayt) who belong to the Ruwaḳa and according to their *shaykh* still surpass the "Ruʿuqa and Barqa" in importance (Philby, *The heart of Arabia*, i, 205, cf. 181, 194). Statistics of the year 1818 estimated the fighting forces of the ʿUtayba of the Ḥidjāz at 100 horsemen and 10,000 foot, and those of the Nadjd at 800 and 2,000 respectively (A. Sprenger, in *ZDMG*, xviii [1863], 218, 222). Palgrave, *Narrative of a year's journey*, ii, 84, put them at 12,000 in all, but Doughty, ii, 367, only at 6,000. The largest figure is that given by al-Batanūnī (*al-Riḥla al-Ḥidjāziyya*, Cairo 1329, introd., 52): 20,000; the *Handbook of Arabia* (First World War period, London n.d.), i, 69, gave for the "Rūqah" 2,500 tents and for the "Berqah" 3,000.

The ʿUtayba occupy the eastern side of the Ḥidjāz, with the volcanic *ḥarra* area between the *ḥadjdj* route and the Central Arabian steppes. Their grazing-grounds extend over 100 leagues east of Medina and Mecca as far as al-Ḳaṣīm and al-Washin, in the south to the *dīra*s of the Ḳaḥṭān, Buḳūm, Shalāwa and Subayʿ; in the west and north, their neighbours are the Ḥarb, who sometimes penetrate as far as the caravan road from Burayda to Mecca. In the wide area over which they lead their nomadic existence there is hardly a single settlement; it is in the east, in al-ʿĀriḍ, al-Sudayr, al-Ḳaṣīm and in al-Mudhnib (al-Midhnab), that we meet with settled ʿUtayba of the Barḳa branch, where they have mixed with other tribes; in the west, the Ruwaḳa form a part of the population of al-Ṭāʾif. The *dīra* of the ʿUtayba is rich in springs, and in the winter and early autumn there is regular although not considerable rainfall; as a result, this region possesses in places very good pastures, and the rearing of sheep and camels, especially black camels, was traditionally one of the main activities of the ʿUtayba which brought them fame and wealth. The meat in al-Ṭāʾif, for example, comes almost exclusively from their sheep; their country is also rich in game (*Handbook of Arabia*, i, 64, 67-8, 70, 604 [their most important settlements]; Doughty, ii, 367, 426, 525; Philby, i, 122, 280).

We know very little of happenings of any importance in the history of the ʿUtayba before the 19th century. According to Burckhardt (*Travels in Arabia*, ii, 106), they occupied also the Wādī Fāṭima in the 17th century and were driven out of it by the Ḥarb (*Handbook*, i, 122). C. Niebuhr (*Beschreibung von Arabien*, 388) mentions some ʿUtayba who came from the Ḥidjāz to the region of the Muntafiḳ [*q.v.*] and had submitted to this great tribe. The history of the ʿUtayba in the 19th and early 20th centuries is a reflection of the various wars between the powers in Nadjd and Ḥidjāz, who all endeavoured to win this important tribe over to their interests. At the conquest of the Wahhābī kingdom by the Egyptians, their leader Ibrāhīm, son of Muḥammad ʿAlī, in 1816 induced the ʿUtayba and various ʿAnaza tribes, by threats and bribes, to assist him against ʿAbd Allāh b. Suʿūd. When Fayṣal b. Suʿūd led the war of liberation against Egypt, his son ʿAbd Allāh in 1850 defeated the eastern ʿUtayba at the watering-place of al-Adjrāb, while the Grand Sharīf of Mecca, Muḥammad b. ʿAwn, took the western ʿUtayba, as well as tribes of the Muṭayr al-ʿAlwiyyīn under his protection. Nolde, *Reise nach Innerarabien*, 66, distinguished between 1842 and 1872 no less than nine different powers continually at war with one another in Nadjd, among them the ʿUtayba. In 1872 the principal chief of the ʿUtayba, Musliṭ b. Rubayʿān, plundered the western settlements of al-Riyāḍ, whereupon Suʿūd b. Fayṣal made a raid as a reprisal into their territory; he had, however, to retire defeated and was himself severely wounded. After the ʿUtayba in 1881 and 1882 had plundered many camps of the Ḥarb tribes who were subjects of Ibn Rashīd of Ḥāʾil [see RASHĪD, ĀL], they also attacked the latter in the summer of 1883 but were completely defeated in al-ʿArwa; they suffered a similar defeat in 1884, when they were allies of ʿAbd Allāh b. Suʿūd. In the year 1897 members of the house of Ibn Suʿūd joined the Grand Sharīf of Mecca, ʿAwn al-Rafīḳ, and with the help of the Ḥarb and ʿUtayba undertook campaigns against the possessions of ʿAbd al-ʿAzīz b. Rashīd; in the autumn of 1903 the latter again defeated the ʿUtayba and Ḳaḥṭān, but in April 1907 he was in turn decisively defeated by Ibn Suʿūd with an army of these same tribesmen. Henceforth the sympathies of the ʿUtayba inclined more and more to the Grand Sharīf, although they were for most part members of the confederation of tribes led by Ibn Suʿūd. In 1910-11 Ḥusayn b. ʿAlī with ʿUtayba, Ḥarb and Muṭayr troops took the field against Muḥammad b. ʿAlī al-Idrīsī in al-ʿAsīr supported by Ibn Suʿūd's *Ikhwān*, and about the same time the son of the Sharīf, ʿAbd Allāh, appeared in al-Ḳaṣīm, saying he was intervening on behalf of the ʿUtayba, whose rights had been infringed by ʿAbd al-ʿAzīz b. Suʿūd. The latter promised to make the Sharīf an annual payment of £4,000 and to secure for the ʿUtayba freedom from tribute, but he did not keep his promise. Scarcely had ʿAbd Allāh returned to the Ḥidjāz than ʿAbd al-ʿAzīz broke the treaty and made war on the ʿUtayba because they had given shelter to fugitive rebels of the house of Ibn Suʿūd. In 1915 ʿAbd Allāh again attacked ʿAbd al-ʿAzīz; he advanced into the province of al-Sudayr in Nadjd, forced the eastern ʿUtayba to pay tribute and won a victory over the Barriyya, the allies of the Muṭayr and subjects of Ibn Suʿūd. The Ghatghaṭ incident of 1918, brought about by an attack by the ʿUtayba upon *Ikhwān* at prayer, again strained relations between the Sharīf and Ibn Suʿūd (Philby, *op. cit.*, i, 313). The history of the rise of the third Wahhābī kingdom was closely associated with the name of the leader of the ʿUtayba, Sulṭān

b. Bidjād. The occupation of al-Ṭā'if by a section of his forces in 1924 led to the surrender of Mecca and the further extension of the Wahhābī kingdom in the west.

The 'Utayba were a prominent element in the militant Wahhābī movement of the *Ikhwān* [*q.v.*], whose heyday was from 1912 to 1930. From the lists compiled by von Oppenheim and Caskel, it appears that the 'Utayba had 19 *hidjras* or settlements for religio-economic activity, a number second only to that of the Ḥarb and just ahead of those of the Muṭayr [see AL-HIDJAR and AL-IKHWĀN]. The 'Utaybī leader Sulṭān b. Bidjād's power was curbed by Ibn Su'ūd, and in 1929 the latter's brother 'Abd Allāh b. 'Abd al-Raḥmān destroyed the *hidjra* of al-Ghaṭghaṭ (al-Ghuṭghuṭ) in the 'Utayba *dīra* and scattered the remnants of Sulṭān's followers. A process of settlement and sedentarisation of the 'Utayba came under way in succeeding decades, with 'Utayba well represented in the *ḥilal* (sing. *ḥilla*) or shanty towns which have grown up around the main urban centres of al-Ḳaṣīm. The tensions arising from such processes as these and the extension of control by the Su'ūdī family over the tribe erupted violently in 1979 when the *Ḥaram* of Mecca was seized by a group of religious zealots, who considered themselves as Neo-*Ikhwān*, and one of whose leaders was Djuhayman b. Muḥammad al-'Utaybī [see MAKKA. 3. The modern period, at Vol. VI, 157b-159a].

The Arabic dialect of the 'Utayba is of the Central Arabian type; see 'ARABIYYA. (iii) (2), at Vol. I, 577-8, and for a linguistic description, P.M. Kurpershoek, *Oral poetry and narratives from Central Arabia*, 3 vols. Leiden 1994-, in progress.

AL-'**UTAYBA**, BAḤR, a shallow, reedy lake in the Ghūṭa [*q.v.*] or cultivated land around Damascus in Syria, lying some 30 km/18 miles to the east of Damascus.

Bibliography: Admiralty Handbooks, *Syria*, London 1943, 28-9.

'**UTAYBA** B. AL-**ḤĀRITH** [see BISṬĀM B. ḲAYS].

'**UTBA** B. **GHAZWĀN** b. al-Ḥārith b. Djābir, Abū 'Ubayd Allāh or Abū Ghazwān al-Māzinī, from the Māzin tribe of Ḳays 'Aylān and a *ḥalīf* or confederate of the Meccan clans of Nawfal or 'Abd Shams, early convert to Islam and one of the oldest Companions of the Prophet. He was called "the seventh of the Seven", i.e. of those adopting the new faith. He took part in the two *hidjras* to Ethiopia, the battle of Badr and many of the raids of Muḥammad.

During 'Umar's caliphate, he was sent from Medina to lead raids into Lower 'Irāḳ, capturing al-Ubulla [*q.v.*], killing the *marzbān* of Dast Maysān and capturing the Persian lord (*ṣāḥib*) of Furāt at the site of what later became Baṣra. Towards the end of 14/635 he encamped with a group of Bedouin from the Upper Ḥidjāz, hence called the Ahl al-'Āliya, at a place called Khurayba (cf. Yāḳūt, *Buldān*, ed. Beirut, ii, 363-4), and at some point after this built a mosque and *dār al-imāra* out of reeds, allotting lots to his warriors; this became the nucleus of the *miṣr* of Baṣra [*q.v.*]. It seems to have become more permanent after 'Utba died in 17/638 at the age of 57 and al-Mughīra b. Shu'ba [*q.v.*] became his successor there. It was Abū Mūsā al-Ash'arī [*q.v.*] who eventually rebuilt the official buildings there out of sun-dried brick with thatched roofs.

(C.E. BOSWORTH)

'**UTBA** B. **RABĪ'A** B. 'ABD SHAMS B. 'ABD MANĀF, ABU 'L-WALĪD, one of the chiefs of the Meccan tribe of Ḳuraysh, who refused to follow Muḥammad. He met his death in the battle of Badr. His daughter Hind [*q.v.*] was the wife of Abū Sufyān [*q.v.*], and she avenged herself at Uḥud on her father's killer Ḥamza b. 'Abd al-Muṭṭalib.

Shocked by the number of adherents of Muḥammad, 'Utba, having consulted the other chiefs of the Ḳuraysh, went to the Prophet to offer him anything he would care to ask if he would only abandon his propaganda. According to the traditional story, Muḥammad in reply only repeated a part of sūra XLI, which made such an impression on him that the effect was still visible when he rejoined his friends, whom he advised not to importune Muḥammad any more. Tradition puts him in a similar light when it represents him as one of those who, on the eve of the battle of Badr, endeavoured in vain to persuade the Ḳuraysh to withdraw by offering personally to pay blood-money for 'Amr b. al-Ḥaḍramī, slain by the Muslims. 'Utba himself was mortally wounded in the battle and his body was thrown into the common ditch (*ḳalīb*). Muḥammad is said to have thought highly of his gifts, and later tradition is perhaps slightly more favourable to him than otherwise because he was an 'Abshamī but not an Umawī.

(A.J. Wensinck*)

AL-'UTBĪ, the name of a family settled in Khurāsān, of Arab descent, which provided secretaries and viziers for the Sāmānids and early Ghaznawids [*q.vv.*] in the 4th/10th and early 5th/11th centuries (from which of the 'Utbas of early Islamic times they were descended does not seem to be specified in the sources).

1. Abū Dja'far (*ism* and *nasab* variously given), vizier under the Sāmānid *amīr* 'Abd al-Malik I b. Nūḥ I, from 344/956 to 348/959 and again, in company with Abū 'Alī Muḥammad al-Bal'amī [*q.v.*], under his successor Manṣūr I b. Nūḥ I, a few years later. His policy aimed at strengthening the power of the ruler and the bureaucracy against the ambitious Turkish military commanders, and Kirmānī says that he restored the wealth of the state treasury to a level never seen before or after. Narshakhī (wrongly calling him Aḥmad b. Ḥasan) says that he built a fine mosque in the Rīgistān of Bukhārā.

2. Abu 'l-Ḥusayn 'Abd Allāh b. Aḥmad, appointed vizier to the *amīr* Nūḥ II b. Manṣūr I in 367/977. Again, he endeavoured to curb the influence in the state of such Turkish commanders as Abu 'l-Ḥasan Muḥammad b. Ibrāhīm Sīmdjūrī, and acquired military as well as civil duties, but was murdered by agents of the generals Fā'iḳ and Muḥammad Sīmdjūrī in or shortly after 372/982. His kinsman Abū Naṣr Muḥammad b. 'Abd al-Djabbār al-'Utbī (see 3. below) rightly considered him as the last vizier of the Sāmānids worthy of the name.

Bibliography: Nāṣir al-Dīn Munshī Kirmānī, *Nasā'im al-ashār*, ed. Djalāl al-Dīn Urmawī, Tehran 1959, 35-6; Sayf al-Dīn 'Aḳīlī, *Āthār al-wuzarā'*, ed. Urmawī, Tehran 1337/1959, 147-8; Barthold, *Turkestan down to the Mongol invasion*[3], 110, 250-1, 252-3.

3. Abū Naṣr Muḥammad b. 'Abd al-Djabbār, secretary, and famed historian of the early Ghaznawids. Born at Rayy *ca.* 350/961, through connections with his maternal uncle Abū Naṣr al-'Utbī, he entered the Sāmānid bureaucracy at Nīshāpūr, becoming *ṣāḥib al-barīd* there, serving as secretary to the Turkish general Abū 'Alī Sīmdjūrī and the Ziyārid Ḳābūs b. Wushmgīr [*q.v.*], before finally transferring to the service of Sebüktigin, where he worked alongside the great stylist Abu 'l-Fatḥ al-Bustī [*q.v.*], and then of his son Maḥmūd of Ghazna. He served as an envoy for the new sultan to Gharčistān in 389/999 and enjoyed the patronage of the vizier Aḥmad b. Ḥasan al-Maymandī [*q.v.*]. He was appointed *ṣāḥib al-barīd* of Gandj Rustāḳ in Bādhghīs, but dismissed as a result of intrigues by the local governor. He remained in retirement till his death in the later part of Sultan Mas'ūd's reign (either 427/1036 or 431/1040).

Al-Tha'ālibī, *Yatīmat al-dahr*, ed. Cairo, iv, 397-406, says that Abū Naṣr wrote several works, including poetry and a *Laṭā'if al-kuttāb*, but his fame rests on the sole surviving one, *al-Kitāb al-Yamīnī*, a history of the reign of Sebüktigin and that of (Yamīn al-Dawla) Maḥmūd up to 411/1020. The model for its ornate and verbose style was, the author states, Abū Isḥāḳ Ibrāhīm al-Ṣābi''s history of the Būyids, the *K. al-Tādj*. Despite its eulogies of the Ghaznawid rulers and their exploits, the *Yamīnī* is by no means neglectful of the darker sides of their reigns. Its florid style ensured its great popularity in the Islamic East; a large number of manuscripts exist (see Brockelmann, I[2], 382-3, S I, 547-8), and several commentaries on it were written, e.g. the *Basātīn al-fuḍalā'* of 'Abd Allāh al-Nadjātī (*ca.* 720/1320) and Shaykh Aḥmad al-Manīnī's *al-Fatḥ al-wahbī* (1144-7/1731-4). Several Persian translations were made, including the simplified version of Abu 'l-Sharaf Nāṣiḥ Djurbādhḳānī (*ca.* 602/1205-6) (see Storey, i, 250-2). It is regrettable that no critical edition exists of al-'Utbī's work.

XIII.

(C.E. Bosworth)

AL-'UTBĪ, Abū 'Abd Allāh Muḥammad b. Aḥmad b. 'Abd al-'Azīz (d. 254/868 or the next year), *faḳīh* of al-Andalus, originally from Cordova.

His masters in al-Andalus were Sa'īd b. Ḥassān and the famous scholar Yaḥyā b. Yaḥyā al-Laythī (d. 234/848 [*q.v.*]), transmitter of the version of the *Muwaṭṭa'* which became the canonical one in the Muslim West. In the course of a *riḥla* to the East, he studied with Aṣbagh b. al-Faradj and Saḥnūn b. Sa'īd (d. 240/854 [*q.v.*]), author of the *Mudawwana*, one of the key texts in the diffusion of Mālikī doctrine in the mediaeval Muslim West. Al-'Utbī was considered an expert on *fiḳh*, and especially on *masā'il*, juridical questions, and with others was a *mushāwar* (consultant *faḳīh*) [see SHŪRĀ. 2.] under the Umayyad *amīr* Muḥammad. He had numerous disciples, the *faḳīh* Muḥammad b. 'Umar b. Lubāba (d. 314/926) being notable here.

Al-'Utbī wrote a work on Mālikī law, *al-Mustakhradja min al-asmi'a*, also known as the *'Utbiyya*. This is an important compilation of *masā'il*, gathered by means of sessions of *samā'*, by the most important transmitters of Mālikī doctrine such as Ibn al-Ḳāsim. Although criticised by some traditionists, the work had a wide diffusion in al-Andalus and North Africa, and was used and consulted in later times. Its transmission through the mediaeval period can be plotted through Ibn Khayr's *Fahrasa*, BAH, ix-x, 241-3, Aḥmad al-Mandjūr (d. 995/1587), *Fihris*, Rabat 1976, 18, and Ḥādjdjī Khalīfa, ed. Flügel, iv, 183-4. On the fragments which have been preserved of the *Mustakhradja*, see Sezgin, *GAS*, i, 472, and M. Muranyi, *Materialien zur mālikitischen Rechtsliteratur*, Wiesbaden 1984, 50-65. The text has been preserved in its entirety within the commentary which Abu 'l-Walīd Ibn Rushd al-Djadd (d. 520/1126 [*q.v.* in Suppl.]) wrote on it, the *K. al-Bayān wa 'l-taḥṣīl* (various eds., [2]Beirut 1988-91, 22 vols.).

Bibliography: Given in the article.

(Ana Fernández Félix)

AL-'UTBĪ, Abū 'Abd al-Raḥmān Muḥammad b. 'Abd Allāh ('Ubayd Allāh) b. 'Amr (as given by Ibn Khallikān, *Wafayāt*, ed. 'Abbās, iv, 397), early 'Abbāsid poet.

He was born in Baṣra, a descendant of 'Utba b. Abī Sufyān, and moved to Baghdād, dying in 228/842-3. Al-'Utbī was a poet ("one of the modern [*muḥdath*] stallion poets, whose verse was plentiful and excellent": Ibn Khallikān, 399-400), tribal historian (i.e. of the *akhbār* of his own clan, the Banū Umayya—did this assume the form of anti-'Abbāsid polemics?), and writer of epistles: Ibn al-Nadīm, *Fihrist*, 121, lauds his command of Arabic. Among his authorities was

Saʿd al-Ḳaṣīr (for Umayyad history: see Ibn al-Nadīm, 90). He counted al-Sidjistānī and al-Riyāshī among his pupils, suggesting an interest in philology: see the *khabar* given by Ibn Khallikān, *loc. cit.*, concerning a Bedouin aphorism, presumably derived from his *K. al-Aʿārīb* ("On the Desert Arabs"). Scant excerpts of his prose compositions (see Sezgin, *GAS*, i, 372 for a full list of al-Masʿūdī's references to him, and Ibn Khallikān, ii, 37, 201, iii, 258) and smatterings of his verse (of an occasional nature, mellifluous and unexceptional: upon exclusion by a chamberlain, on old age, and a threnody for dead sons) have been preserved. Al-ʿUtbī was probably a *kātib* [*q.v.*]: Ibn al-Nadīm's entry (90) associates him with official functionaries, classifying him with the epistolary scribes whose productions were collected in a compendium (*kitāb madjmūʿ*: 117). The following titles are mentioned: *K. al-Khayl* ("On horses"), *K. al-Nisāʾ al-lātī aḥbabna wa-abghaḍna* ("On women whose love turned to hate"), *K. al-Akhlāḳ* ("On ethics") and *K. al-Dhabīḥ* ("On immolations"). The *khabar* (Ibn Khallikān, 400) concerning the *zarāfa*, an Abyssinian hybrid beast, suggests learning of the catholicity encountered in his contemporary al-Djāḥiẓ [*q.v.*]. An anti-Umayyad polemic is discernible in the tradition, originating with Ibn Ḳutayba (*Maʿārif*, ed. ʿUkāsha, Cairo 1969, 538) that he was "passionately fond of drinking".

Bibliography: Given in the article.

(J.E. MONTGOMERY)

AL-**ʿUTBĪ**, ABŪ NAṢR MUḤAMMAD [see AL-ʿUTBĪ. 3.].

AL-**UTHĀL**, AL-ATHĀL (A.), a pot used in the sublimation process in chemistry for causing bodies to pass from the solid state to that of gaseous aggregation by means of steam pressure. The word is a rendering of αἰθάλη ("steam, fine smoke") which, via Syriac *ītalī* (Brockelmann, *Lexicon Syriacum*², 55), became Arabic *al-uthāl* and lived on among the Latins as *aludel* (*alutel*). Representations of the device are found in M. Bertholet, *La chimie au Moyen Âge*, i, 149, 150, 156. The contrivance serves to sublimate mercury (*zaybaḳ*), sulphur, orpiment (*zarnīkh*) and the like. It is made of glass or clay (*fakhkhār*) and consists of two tubes (*ziḳḳ*, actually hoses) fitted together. The mineral is put in the lower tube, the two tubes are fitted together with clay and the whole is put on the fire. The ascending smoke gets to the upper tube, cools down and produces the desired sublimate.

Wiedemann, in *Aufsätze zur Wissenschaftsgeschichte*, ed. W. Fischer, i, 695; Dozy, *Suppl.*, s.v. *athāl*; Berthelot, *op. cit.*, ii, 111, 133.

(A. DIETRICH)

ʿUTHMĀN [for this name in the Turkish context, see ʿOTHMĀN].

ʿUTHMĀN B. **ʿAFFĀN**, the third of the Rightly-Guided Caliphs (23-35/644-55). He belonged to the great Meccan family of the Banū Umayya [*q.v.*], and more particularly to the branch of Abu 'l-ʿĀṣī who was his grandfather; for his genealogy, see Wüstenfeld, *Geneal. Tabellen*, U. 23, and the table in UMAYYA. His sudden support for the Prophet's preaching began his life as a Muslim.

ʿUthmān was a very rich merchant and an accomplished man of the world. The tradition which represented him as the very esssence of beauty and elegance to the extent of being overgroomed may very well have been authentic, precisely because it was so strange. Whatever deep motive led him to embrace a cause with such an obscure origin will always remain a mystery. Part of the historiographical tradition relates the conversion of ʿUthmān with his marriage to Ruḳayya [*q.v.*], the daughter of Muḥammad; but other sources, probably more correctly, place his marriage after his entry into Islam. The conversion of ʿUthmān, the first socially high-ranking Muslim, certainly created a stir and contributed to the success of the new religion. However, his personal action in this field was never remarkable. An indolent personality, though one marked by a lively faith and great generosity, is attributed by tradition to ʿUthmān. This was unlikely to have been an invention to excuse the inactivity of the caliph with respect to the malpractices of his officials, for the lack of energy and initiative ascribed to ʿUthmān had become clear right from the start of his career, and this must have been a real defect of character. He is thought to have taken part in the two emigrations to Abyssinia and was later one of the *muhādjirūn* to Medina. Certainly, he does not seem to have taken part in the battle of Badr (he is said to have been looking after his sick wife at the time; nevertheless, the Prophet thought he had been present and therefore assigned him part of the booty).

After the death of Ruḳayya the alliance between ʿUthmān and the Prophet was renewed by his marriage to another of the Prophet's daughters, Umm Kulthūm [*q.v.*]. The doubts that have been raised (see Lammens, *Fāṭima et les filles de Mahomet*, 3-5) over the authenticity of this marriage are not justified, in particular because the papyrus roll of Ibn Lahīʿa early bore witness to it (see R.G. Khoury, *ʿAbd Allāh Ibn Lahīʿa*, 282, traditions 260-1, and 183, 7-8). Furthermore, there were clear advantages in such a union with a Meccan aristocrat.

In the lifetime of the Prophet and during the caliphates of Abū Bakr and ʿUmar, ʿUthmān played a most unobtrusive role. Hence the question is raised of how it came about that the council (*shūrā* [*q.v.*]) set up by ʿUmar on his deathbed should have chosen him as the successor to the second caliph. The sources relating to the history of this diligent "conclave" have been analysed minutely by Caetani, but it is only too obvious that the mystery of such a secret debate is destined to elude the critical appraisal of history forever. Candidates who were too outstanding cancelled each other out. One of these was ʿAlī, whose election would have signified the repudiation of the politics of ʿUmar. Such also, it would seem, were Zubayr and Ṭalḥa, who were opponents of ʿUmar and suspected of ambition and greed. Of the three remaining candidates, Saʿd b. Abī Waḳḳāṣ, ʿAbd al-Raḥmān b. ʿAwf and ʿUthmān, one would imagine that the reason the last was chosen, in addition to his marriage connections with the Prophet, would be the fact that he belonged to the clan of the Umayyads, and this would be the most decisive argument in his favour. The Umayyads, even in the lifetime of Muḥammad and especially in the caliphate of ʿUmar, had already partly regained the position they had enjoyed in the *Djāhiliyya*. It is pointless to imagine that Abū Sufyān, the head of the family, had been the *deus ex machina* of the politics of the first twenty years of the régime of the caliphate, and it would be naive to portray the Umayyads as having formed a sort of "secret committee" with the Islamic state to command at will. In reality, the Umayyads were able to wield their influence more because of the indisputable talent in public affairs which some of their members possessed than because of their noble birth. But from the time of ʿUmar this was counterbalanced

by the part played by the other elements, and in particular by the oldest "Companions of the Prophet". It was the strong personality of the second caliph which enabled him to maintain equilibrium between a number of heterogeneous factions who were often opposed to each other.

But this was not the case with ʿUthmān. In fact as Wellhausen earlier observed, and as Caetani has amply demonstrated, ʿUthmān only furthered and developed the politics of ʿUmar. The difficulties which he encountered were merely the consequence of the premises posed by his predecessor, but it was at this point that the differences in their talents became noticeable.

The tragedy which brought a bloody end to the reign of ʿUthmān and ushered in the period of civil wars has caused much embarrassment to Arab historiographers. They have been obliged to record the series of grievances brought against ʿUthmān's regime by his opponents, or *vice versa*, to recognise that the caliph had sinned against the law of his land, or even that his accusers, among whom were some of the most venerated patriarchs of this land, had lied or had been wrong. It was thanks to this distressing dilemma (from which the orthodox tradition extracted itself by the expedient of the "excusable error" and other subtle distinctions) that the long list of grievances has been preserved for us in great detail in the writings of Muḥibb al-Dīn al-Ṭabarī, *al-Riyāḍ al-naḍira fī manāḳib al-ʿas̲h̲ara*, ii, 137-52; al-Balād̲h̲urī, *Ansāb*, v, 1-124. This work is of importance as it corrects and completes certain aspects of the information previously known, although it does not add much new material.

The first grievance, and perhaps the most serious, was that he had nominated members of his family for provincial governorships. While Syria had long been in the hands of the Umayyad Muʿāwiya b. Abī Sufyān, at Baṣra and at Kūfa ʿUthmān replaced Abū Mūsā al-As̲h̲ʿarī and Saʿd b. Abī Waḳḳāṣ [*q.vv.*] by his two relatives ʿAbd Allāh b. ʿĀmir b. Kurayz and al-Walīd b. ʿUḳba [*q.vv.*], his half-brother. When the latter was deposed, after being involved in a scandalous affair, he was replaced by another Umayyad, Saʿīd b. al-ʿĀṣ, to whom is attributed the well-known saying "the *sawād* of Kūfa is the garden of the Ḳurays̲h̲". Even Egypt, first conquered by ʿAmr b. al-ʿĀṣ, fell to ʿAbd Allāh b. Saʿd b. Abī Sarḥ, who was not an Umayyad and whose past was dubious. Finally, the private counsellor of the caliph, whose disastrous influence was described by tradition, was Marwān b. al-Ḥakam b. Abi 'l-ʿĀṣī, the first cousin of the caliph, who had recalled his father from the exile to which the Prophet had condemned him.

It is impossible to deny a certain nepotism in the measures taken by ʿUthmān. However, his deeper motives must also be recognised. It was his intention to establish unity in his government and administration, which was threatened by the excessive independence enjoyed by his governors (see for example, for matters relating to the nomination of judges, Khoury, *Zur Ernennung von Richtern*, 197 ff. but cf. the views here of B. Johansen, *Wahrheit und Geltungsanspruch. Zur Begründung und Begrenzung der Autorität des Qadi-Urteils im islamischen Recht*, in *La Giustizia nell'alto medioevo (secoli IX-XI)*, ii, Spoleto 1997, 975-1065, esp. 981-2 n. 16). It was on the whole the same purpose as that pursued by ʿUmar, but by dint of his energy and prestige he had succeeded in conveying the weight of his authority even to the governors of other tribes and clans. ʿUthmān believed he would be able to obtain the same results by using officials who were bound to him by blood ties, but he was not successful. The roles were reversed and it was the caliph who submitted to the influence of his relatives (perhaps, however, to a lesser extent than the official historiography implies). Furthermore, popular discontent recognised this as the sole cause of the calamities and assumed that they were probably not the result of the character of the official involved.

The system of the *dīwān* instituted by ʿUmar required that war booty be perpetually increased, since the regular tax returns on the *ahl al-d̲h̲imma* were not enough for the salaries of the new recruits who were flocking to the provinces from the heart of Arabia, and it is one of the great merits of Caetani to have drawn attention to this. This was also the motivation for the new expeditions which continuously extended the frontiers of the Arab empire during the caliphate of ʿUthmān. One such expedition resulted in the conquest of the last provinces of the Sāsānid empire, whose dynasty came to an abrupt end with the murder of the last of their kings Yazdagird III. Another was the occupation of Armenia; and then again a series of incursions were made along the coast of North Africa into Nubia and into Asia Minor, and by sea into the Eastern Mediterranean. If the conquests accomplished or begun by the Arabs during the caliphate of ʿUthmān were all to be examined, it would be clear that, though they may not have had the prodigious verve of those which took place under ʿUmar, nonetheless they marked in an imposing manner on the one hand the end of the initial period of the Arab empire, and on the other the prelude to the second period of expansion, that of the Umayyads.

The booty gleaned from these expeditions was, however, perhaps not as abundant as might have been hoped. Moreover, another of the grievances brought against ʿUthmān arose from the fact that, instead of assigning such booty as there was to the fighters as a whole, he held back part of it for his governors and for members of his family, and thus developed the system of land grants (*ḳaṭāʾiʿ* [see ḌAYʿA; ḲAṬĪʿA]) which had already generally been practised by ʿUmar. In this action is also possible to see a conscious attempt to create property for the state rather than simply being a means of enriching his relatives, which is a concept totally opposed to the populist procedure of a total division of the spoils of war among the combatants.

The Islamic empire tended from internal necessity to favour an ordered administration modelled on that of the Byzantines or the Persians. The one which ʿUmar had already drafted, the one which the Umayyads later realised in part and which the ʿAbbāsids achieved, was the transformation of the incoherent and anarchistic grouping of the tribes and of an absolute monarchy; this was also the programme embarked on by ʿUthmān. He can be reproached for not having been able to choose the best methods of going about it, and can also be accused of not being up to the task, but his plan was adequate and merely followed the ideal set by ʿUmar. Moreover, the economic crisis that was the inevitable consequence of the sudden enrichment of the Arab masses made it essential for the state to economise and to cut back on the total number of military allowances [see ʿAṬĀʾ]; in turn these only served to increase the number of the discontented.

One of the measures which contributed most to the opposition of the religious lobby to ʿUthmān, formed by the old Companions of the Prophet who were of simple or servile origins (ʿAmmār b. Yāsir, Abū D̲h̲arr, ʿAbd Allāh b. Masʿūd [*q.vv.*], etc.) and the influence

of which the people strongly resented, was the official promulgation of the Ḳurʾān (see Nöldeke-Schwally, *Geschichte des Qorans*, ii, 42-119). What appeared to be the most offensive part of this procedure was the destruction of copies from the provinces. ʿUthmān was probably compelled to do this out of consideration for religious order and liturgy, but perhaps the dominant motive was still political in nature. The *ḳurrāʾ* [*q.v.*] who were the custodians and also, of course, the readers and interpreters of the sacred text, by their very position held enormous power over the masses, and this in a sense placed them outside the scope of the central authorities. These in turn had no way of checking whether the Ḳurʾānic passages used by the *ḳurrāʾ* were authentic or not. By removing this weapon from them and by setting itself up as the sole custodian of revelation, the ruling power intended to bring about unity and to establish its absolute power over the state. It was, however, only a natural reaction for the opposition to this tendency to accuse the caliph of having mutilated and destroyed the divine word.

ʿUthmān succeeded in making enemies for himself with many different groups; he became the scapegoat of the turbulent elements among the *amṣār* [see MIṢR] because of economic difficulties. They were inclined to accuse the caliph of confiscating the property of Muslims for his own benefit. A new pietism was emerging to which the affirmation of the authority of the state seemed against the egalitarian principles laid down by the Prophet. And finally, formerly deposed governors and leading Companions, like Ṭalḥa, al-Zubayr and ʿAlī, now out of power, were eager for it. It is questionable whether ʿUthmān, while obviously following the course of conduct imposed on him by the needs of the state and by the example of his predecessor, would have been able to avoid the destiny which overtook him and which so deeply disrupted Islamic unity. Though any answer to this sort of question will always be uncertain, in the realms of history it is possible to surmise that a more intelligent mind and a more energetic temperament than his (or rather a real political genius such as Muʿāwiya, had he been head of state) would perhaps have overcome these difficulties. Perhaps his counsellor Marwān, too, who some thirty years later would show himself equal to a no less difficult situation, was lacking in experience or prudence. Certainly ʿUthmān was incapable on his own, but he was also badly advised, and the very Umayyads whom he had showered with favours and riches preferred to think of themselves than of their relative in danger.

How the events took place can here be dealt with only summarily. Tradition mechanically divides the caliphate of ʿUthmān into two periods of equal length, six years (23-29) of good government followed by six years (30-35) of lawlessness and disorder. The change is represented symbolically by the loss of the Prophet's seal which according to legend, ʿUthmān dropped into the well of Arīs in the year 30. Moreover, it was precisely at this period that the first rebellious movements began which were first seen in ʿIrāḳ, the region which suffered most from the economic crisis and where the dissident forces were most widespread. Abū Dharr, one of the precursors of asceticism in Islam, was exiled to Syria with some of his companions, and later sent down to al-Rabadha [*q.v.*] to die there in destitution. Though the episode concerning him is embellished by legend, it is characteristic of the attitude of the emerging pietism with respect to the worldly transformation of the caliph.

Even more serious trouble erupted at Kūfa in the years 32-3/652-4, under the leadership of the *ḳurrāʾ*, whose religious nature merged with political activity and who collected about them doubtful elements. Despite a few severe measures adopted against them, the faction leaders succeeded in provoking the deposition of Saʿīd b. al-ʿĀṣ, who was replaced by the former governor of Baṣra, Abū Mūsā al-Ashʿarī, himself a pietist and an adversary of ʿUthmān. From that time onwards Kūfa was beyond the reach of the central government.

Even in Egypt, Ibn Abī Sarḥ had to yield to the violence of a group led by the young Muḥammad b. Abī Ḥudhayfa, who, although he was the adopted son of ʿUthmān, nevertheless opposed him. It seems that the wily ʿAmr b. al-ʿĀṣ, who had retreated to Palestine after being deposed, secretly supported the revolutionary movement in Egypt. The role of this movement must have been more important than was previously believed, since the payrus of Ibn Lahīʿa described the events from an Egyptian perspective and noted that the number of Egyptians involved in besieging the caliph was plainly greater than that of other parties (see Khoury, *ʿAbd Allāh Ibn Lahīʿa*, 181 ff., 190 ff.). The storm which was already looming broke at the end of 35/656 when the rebel troops advanced from the three provinces on Medina. The first to arrive were the Egyptian troops with ʿAbd al-Raḥmān b. ʿUdays at their head, and they went on the Friday to worship in the mosque of the Prophet (*ibid.*, 116, 282). Dramatic exchanges took place between the Egyptian troops and the caliph. The grievances against ʿUthmān were set forth in extremely harsh language. But the rebels were disarmed by the humility and conciliatory attitude of the caliph, who consented to all their demands, promised to repeal all his previous measures and to change his governors. The Egyptians left satisfied, but on the way back, at the sand flats of al-ʿArīsh, a messenger from ʿUthmān was stopped and a letter taken from him addressed by ʿUthmān to Ibn Abī Sarḥ containing the order to put to death or to mutilate the leaders of the movement on their return.

The Egyptians were furious, retraced their steps and returned to Medina, determined on vengeance. It was at this point that the changes in fortune occurred, described by the papyrus roll of ʿAbd Allāh b. Lahīʿa, which indicates that Ibn ʿUdays was at the head of the Egyptians (the account of the second siege). ʿUthmān denied that the letter was authentic and even insinuated that it had been forged by his enemies to ruin him. Although the official tradition has the tendency to ascribe this lie to Marwān, there is also evidence of other versions and even one (preserved only by al-Balādhurī) which claims that ʿUthmān had suspected ʿAlī. In fact, this is what Caetani (*Annali*, viii, 159), without any knowledge of this text, had already supposed. It is well known from other sources that it was a common practice to invent false documents designed to destroy an enemy who could not be defeated in any other way; but whatever one may think of this shady episode, it is certain that, whether or not it was the immediate cause of the tragic end of ʿUthmān, other factors had already been set in motion. The events actually led, according to the papyrus, to a second siege of the house of ʿUthmān, and the caliph began to speak in the presence of Abū Thawr al-Fahmī. The latter informed him of the return of the soldiers to destroy him, and then comes the oldest self-defence of the caliph that is known in its original version in Islam (see Khoury, *ʿAbd Allāh*

Ibn Lahīʿa, 281, traditions 256 ff.). In this text, ʿU<u>th</u>mān insists on the falsehood of the accusations levelled against him, highlights his role as the fourth person to adopt Islam, his oral collection of the Ḳurʾān from as far back as the lifetime of the Prophet, his marriage to two of the Prophet's daughters (without naming them) as well as his exemplary spiritual life in the *<u>Dh</u>āhiliyya* and in Islam (*ibid.*, 282, traditions 260-4). Most hypocritical of all were the old Companions who opposed him in an underhanded manner. They did not dare to become accomplices in the violent deposition of the caliph, but neither did they wish to help him against the rebels; and so they, and in particular ʿAlī, maintained a malevolent neutrality. The Prophet's widow ʿĀʾi<u>sh</u>a [*q.v.*], who had led a violent campaign against ʿU<u>th</u>mān, preferred to avoid the issue at the last moment on the pretext of a pilgrimage to Mecca.

In his extremity, ʿU<u>th</u>mān knew how to retain all his dignity. He refused to abdicate, and after a siege, the length of which was variously estimated by different sources, some individuals were able to enter his house in the final days of 35 (June 656). They were led by Muḥammad b. Abī Bakr [*q.v.*], the son of the first caliph and the brother of ʿĀʾi<u>sh</u>a, and it was he who seized ʿU<u>th</u>mān. It is not clear whether he was the one who struck the final blow, or if it was someone else; tradition cites several names, and it is evident that right from the beginning the whole affair was obscure. It is said that the caliph's blood flowed on to the copy of the Ḳurʾān which he was reading when he was attacked. His wife, the Kalbiyya Nāʾila bt. al-Furāfiṣa, was injured, and the house was ransacked. During the night his body was buried in deepest secrecy by his wife and a few close friends. The troops which Muʿāwiya had sent from Syria (tradition claims that they arrived too late and accuses them of duplicity) received the news of the murder when they were half-way there, and so they hastened to return. The same papyrus begins (see *ibid.*, 244) with the pursuit of the Egyptian murderers, eventually imprisoned by Muʿāwiya in Lydda (Palestine), whose leader, Ibn ʿUdays, took flight but was recaptured by a horseman and was battered to death.

The election of the new caliph took place amid an atmosphere of tumult and terror, as is well known (see Caetani, *Annali*, ix, 321-42). According to this author, it demonstrates that no previous agreement existed between the leading Companions which could probably be thought to have anticipated these events. The election of ʿAlī was unquestionably due not so much to the prestige afforded him by his family connections and his alliance with the Prophet, but more to the support of the Anṣār who had regained influence in their city while the Umayyad party was in disarray. But right from its inception, the new régime was destined to be attacked either by other competitors disappointed in their expectations, or by Muʿāwiya, the only Umayyad governor who had remained in control of his province.

From then on, any political unity of Islam was over, and soon religious unity also, making way for a period of civil wars and schisms. The caliphate of ʿU<u>th</u>mān and his bloody end marked a turning point in Islamic history and attributed an importance to the third caliph certainly not merited by what was in fact an altogether rather mediocre personality. History, and especially literary history, was captivated by his murder and wove various narratives around it, some of which were noteworthy and have been passed on under the heading of *fitna* (*q.v.*, and *ʿAbd Allāh Ibn Lahīʿa*, 211-17; here there are different definitions of the term which the papyrus uses; see also Sellheim, 88-9).

(G. Levi Della Vida-[R.G. Khoury])

ʿU<u>TH</u>MĀN b. FŪDĪ, sc. ʿU<u>th</u>mān b. Muḥammad b. ʿU<u>th</u>mān b. Ṣāliḥ, known as Ibn Fūdī (or Usuman Dan Fodio, to use the current Hausa form) (1754-1817), the founder of the largest independent state in 19th century Africa. A *<u>sh</u>ay<u>kh</u>* of the Ḳādiriyya, in 1804-8 he led a *<u>dj</u>ihād* that overthrew the existing sultanates in Hausaland and Bornu in what is now northern Nigeria. By preaching publicly and attracting students of all kinds, by writing vernacular poetry and books of instruction in Arabic, he inspired a reform movement that transformed the role of Islam in West Africa: what had been the profession mainly of religious specialists became the everyday religion of ordinary people, including peasants and herders, women and slaves.

Usuman dan Fodio was born on Sunday, 15 December 1754 at Maratta near Konni in northwestern Hausaland (on today's Niger-Nigerian frontier). He died in the newly-built capital, the city of Sokoto [*q.v.*], on Sunday, 20 April 1817. In February 1804, at the start of the *<u>dj</u>ihād*, he was elected by his community as the first Imām and *Amīr al-muʾminīn* of the state that has since the 1960s become known as the "Sokoto Caliphate". By December 1808 the last of the great Hausa cities had fallen to the reformers, and in 1812 the Shehu (as he is popularly called) was able to divide the state into two halves, one under his son Muḥammad Bello [*q.v.*] and the other under his brother ʿAbd Allāh at Gwandu. He then devoted himself again to teaching Ṣūfism and writing. He was

a powerful preacher and prolific author, writing over a hundred works in prose and more than fifty in verse. As a poet he wrote in both Arabic and Fulfulde, many of the Fulfulde poems being later translated into Hausa. It is not proven that he wrote any poetry in Hausa but he preached in that language, while Fulfulde was his language of everyday use.

His career divides broadly into three periods. The first, 1774-94, is a period of preaching. As a young scholar, he travelled to study under various local *shaykhs* and toured, preaching in Zamfara and for a while tutoring the sons of the Sultan of Gobir. He debated with other scholars, for example over the propriety of having women in the audience at teaching sessions or over whether knowledge of *kalām* was necessary for qualifying as a Muslim (and therefore having the rights of the Muslim "caste"). In general, the Shehu's position was populist: anyone, he argued, was a Muslim if he correctly carried out the practices of Islam. These were explained in his major didactic work of the period, *Iḥyāʾ al-sunna wa-ikhmād al-bidaʿ*.

The second period, 1794-1810, was marked by a turning towards militancy. In 1794 he had a crucial vision, in which the Prophet instructed Shaykh ʿAbd al-Ḳādir al-Djīlānī [*q.v.*] to invest the Shehu personally with the sword of truth; before this time, neither a Muslim Ṣūfī scholar such as Usuman nor his students would carry weapons. But now, with the explicit authority of both the Prophet and his own Shaykh in the Ḳādiriyya, the Shehu could order his followers to take up arms and defend themselves. The rapidly rising numbers of peasants converting to Islam had been causing concern to the local state authorities (especially in war-ravaged Zamfara), not least as these new Muslims then claimed exemption from both taxation and military service, and often ceased to work for their fathers. Conversion was especially popular among slaves, who ran away to any *shaykh* who refused to let his new students return to slavery or be sold to non-Muslim owners. Once the Muslims had armed themselves, they forfeited their general immunity as religious specialists, and all Muslims—including conservative communities of Fulbe scholars—became targets for raids by the local military. It is therefore not surprising that there were Muslims even among his kinsmen who did not support the Shehu in his call for *djihād*; they argued that the sultans in power were already Muslim and that the Shehu was therefore simply a trouble-maker.

The majority of the Shehu's students whose names are preserved in contemporary lists were Fulbe [*q.v.*], as were both the majority of his military allies in the Sokoto region and the majority of those to whom he gave flags of command in regions that were to become amīrates. Some early supporters who were not Fulbe, such as Shaykh ʿAbd al-Salām (of Gimbana and, later, Kware) or Shaykh ʿAbd al-Raḥmān Chacha (of Raba, in Nupe), were killed by djihādist forces. Of the *djihād* leaders, only Yaʿḳūb of Bauchi was not a Pullo or member of the Fulbe, but he had been a young student of the Shehu before the *djihād* and had been given a wife from Zamfara. Apart from his fellow-Fulbe, the Shehu's closest mentors and allies were Berber or Tuareg scholars from the Sahel, especially his *shaykh* Djibrīl b. ʿUmar from the town of Agadès in the north; Djibrīl had been an early advocate of *djihād* before being exiled.

The period of militancy culminates in the *djihād* of 1804-8. As a *shaykh* now over 50 years old, Usuman did not himself take up arms, though on certain critical occasions he went to the battlefield to support by prayer the djihādist forces. Though ʿAlī Jedo was appointed *Amīr al-djaysh* to control the young djihādist militants, the Shehu used to give out flags for specific campaigns, especially to his son Muḥammad Bello and his brother ʿAbd Ullāh; as commanders of expeditions they tried to enforce the rules on booty. During this period, the books which he wrote under the pressure of *djihād* (such as *Bayān wudjūb al-hidjra ʿalā ʾl-ʿibād wa-bayān naṣb al-imām wa-iḳāmat al-djihād*) are polemical and strict in their interpretations of the laws governing *djihād* and on who is and who is not to be counted as a Muslim. The result was that many states whose rulers were Muslim by any ordinary definition were declared to be legitimate targets of *djihād*. His *djihād* was therefore not against pagans but primarily against Muslims unwilling to accept reform.

The Shehu's community had been so outnumbered that their ultimate victory in the *djihād* seemed miraculous, and this made some believe the Shehu might be the Mahdī [*q.v.*]. This he rejected (at most he was the *mudjaddid* [*q.v.*] for the 13th Islamic century); he was also personally disinclined at first to believe that the coming of the Mahdī was imminent. In 1806, however, he became convinced and sent a message to his regional flagbearers to be ready for the coming of the Mahdī. It was an extremely difficult time: deaths from famine and disease exceeded deaths even from *djihād*, and cattle were dying in an epizootic. In such a crisis, millenarian expectations perhaps persuaded waverers to join the very risky but righteous cause of *djihād*. The Shehu did not, however, support a *hidjra* to Mecca to await a putative Mahdī; indeed, neither he nor any of his independent successors ever left the Sokoto region, whether for the pilgrimage or on campaign. Instead, visitors were to come to Sokoto from other parts of West Africa, the Middle East and Europe, bringing with them their books, new technologies and ideas.

The third period, the period of pragmatism and power, from 1810 to 1817, was when the Shehu withdrew largely from the administration of the state. His ideas during this period—as expressed, for example, in his *Nadjm al-ikhwān yahtadūna bihi bi-idhn Allāh fī umūr al-zamān*—are much more moderate than they were during the *djihād*: practices that were previously taken as proof of un-Islamic government were now not ruled out. The imperatives of establishing effective administration took precedence. His small community of scholars and students had turned into a large state dependent on a military element more interested in materialism than Ṣūfī discipline; as a result, the scholarly, quietist element of the community located itself at Gwandu, leaving the Shehu as a beacon to pilgrims in his house on the edges of the city at Sokoto.

Especially in the last two years of his life (1815-17), the Shehu was regarded as a saint, with people coming to his house anxious to touch his clothes or acquire pieces of his hair. This worried him: he explicitly denied he was a *walī*, though he admitted he could listen in on the conversations of the *djinn* and had other unusual powers that obliterated distance. Several miracles are attributed to him, a number of which were recounted in a book written twenty years after his death by his son's vizier Gidado, who had married Asmāʾ, the learned daughter of the Shehu. The Shehu also worried whether he had been responsible for the death of Muslims in the course of the *djihād*, but he had now stopped writing. Though troubled by disturbed sleep and illness in his last years,

he was still well enough at 63 to father a child by a concubine, his son ʿĪsā being born posthumously in 1817.

The Shehu's own family was large. He had 37 children by a total of 13 wives (including at least one concubine); one of his sons had 63 children, a son-in-law 48. He insisted on his wives being in purdah (which was unusual at the time), and he educated his daughters to become major poets in their own right. He wrote in verse about the proper behaviour of a husband to his wives, and he was concerned with the sexual morality of Fulbe women, describing graphically the provocativeness of their dress and manner. His preaching depicted powerfully the terrors of hell-fire and the need to avoid the sins that make "a Muslim in the morning become a pagan by the evening". His work, filled with detailed practical advice, has a strongly moral dimension which is often overshadowed by the emphasis on his political success.

The Shehu called upon his Fulbe supporters to intermarry and thus break down their divisive clannishness and concern for social hierarchy. Himself a Torodo and a descendant of migrants from the Senegal valley, the Shehu traced his origin back to Arabs (and Jews, according to his brother; the claim to descent from the Prophet was only made after his death). His family did not identify themselves as "Blacks" (*al-Sūdān*); rather, they were the rulers for these *Sūdān* and felt it their task to establish for them a truly Islamic *umma*; a Sūdānī was appointed muezzin to the new community, in the manner of the Prophet Muḥammad.

On his death, the Shehu was buried (as was the custom) in his house, which by the 1850s had become the focus for the *Yan Taru*, an association of Muslim women who made regular visits to his grave. This was part of a concerted attempt by the Sokoto leadership to link the Ḳādiriyya with the Shehu and resist the growing success of the Tidjāniyya [*q.v.*] in attracting converts, hence the translations made into Hausa of the Shehu's poetry as well as the composition of books about the *djihād* and the Shehu's life. In the 20th century, the focus of attention has shifted somewhat away from the Shehu and on to his son, Muḥammad Bello, as the role model for the politically able. In particular, the Premier of Nigeria's Northern Region added "Bello" to his name and used to pray publicly at Bello's tomb in Wurno; and it is Bello's house that has remained the caliphal palace in Sokoto. Nonetheless, the Shehu's house is preserved and is still visited, particularly by the old; but responsibility for developing a modern Ḳādirī *ṭarīḳa* for northern Nigeria has since passed from the Shaykh's heirs in Sokoto. Several of his books, however, remain in print and are widely sold in rural markets, while his songs can be heard even today far beyond the boundaries of Sokoto.

ʿUTHMĀN b. MARZŪḲ b. Ḥumayd b. Salāma al-Ḳurashī, Abū ʿAmr (d. 564/1169), Ḥanbalī jurist and mystic, known as Ibn Marzūḳ. He studied with Ibn al-Ḥanbalī (d. 536/1141, not "Ibn al-Djīlī", as in Ibn Radjab, i, 306) at Damascus, though whether he was born there is not clear; he is also said to have met ʿAbd al-Ḳādir al-Djīlānī [*q.v.*] and to have held him in high esteem. He lived mainly in Egypt and died there, aged over seventy years old. Only one work of his seems to be mentioned, an abridgement of Abū Nuʿaym's *Ḥilyat al-awliyāʾ*, which bears the same title as Ibn al-Djawzī's abridgement of the same work, *Ṣafwat al-ṣafwa* (*Kashf al-ẓunūn*, Istanbul 1941-3, ii, col. 1080). Several short mystical-paraenetic discourses are quoted by Ibn Radjab. He appears to have acquired an odour of sanctity early on, and a number of miracles (*karāmāt*), especially referring to the flooding of the Nile, are attributed to him (Ibn Radjab, 307, ult.-308, l. 9, and R. Gramlich, *Die Wunder der Freunde Gottes*, Wiesbaden 1987, index s.n. "Uṯmān b. Marzūq al-Qurašī").

Ibn Marzūḳ is said to have voiced an extreme Ḥanbalī position in saying that the faith and the works of man are uncreated (*ghayr makhlūḳ, ḳadīm*, see Ibn Radjab, 309-10, and cf. J. van Ess, *Theologie und Gesellschaft im 2. und 3. Jahrhundert Hidschra*, Berlin 1991-7, iv, 578), for which he was taken to task by Ibn Taymiyya (Ibn Radjab, 310-11, and Ibn Taymiyya, *Madjmūʿ al-fatāwā*, vii, 680 ff., quoted after van Ess). Actually, it is Ibn Marzūḳ's followers whom Ibn Taymiyya mainly attacks as imputing opinions to their *shaykh* which he probably did not hold. Indeed, Ibn Marzūḳ's own formulation, quoted by Ibn Radjab from an unnamed book on *uṣūl al-dīn*, is more sophisticated: "Faith is uncreated in its words (i.e. the creed) as well as in its works; the movements of man are certainly created, but the eternal looms (*yaẓhar*) in them, just as the speech [of God] looms in the utterances of man [when reciting the Ḳurʾān]." Whether Ibn Taymiyya also accused his followers of having turned him into a "saint", as Jacqueline Chabbi alleges, basing herself on the same passages in Ibn Radjab, is far from certain (for mentions of Ibn Marzūḳ, see her *ʿAbd al-Ḳādir al-Djīlānī*, in *SI*, xxxviii [1973], 80, 85).

Ibn Marzūḳ's son, Saʿd, continued in the vein of his father as a Ḥanbalī mystic (see the article on him in Ibn Radjab, i, 384-87).

ʿUthmān b. Marzūḳ should not be confused with another Ḥanbalī mystic by the name of Ibn Marzūḳ, sc. Abu 'l-Khayr ʿAbd Allāh (d. 507/1113), a disciple of ʿAbd Allāh Anṣārī (see S. Laugier de Beaurecueil, O.P., *Khwādja ʿAbdullāh Anṣārī*, Beirut 1965 120).

(W.P. Heinrichs)

ʿUTHMĀN b. MAẒʿŪN b. Ḥabīb, Abu 'l-Sāʾib, of the Ḳuraysh clan of Djumaḥ, one of the earliest Companions of Muḥammad, the thirteenth man to adopt Islam and brother-in-law of the second caliph ʿUmar b. al-Khaṭṭāb. He took part in the *hidjra* to Abyssinia, returned, like some other refugees, on the false news of a reconciliation between Muḥammad and his pagan enemies, and became for some time the client of al-Walīd b. al-Mughīra. Soon he renounced this privilege, because he preferred to bear his share in the insults offered to his co-religionists

in Mecca. On a quarrel between ʿUthmān and the poet Labīd, see Ibn Hishām, 343-4.

ʿUthmān took part in the *hidjra* to Medina, where he found lodging with Umm al-Aʿlā. When Muḥammad formed pairs of "brothers" between the Muhādjirūn and Anṣār [see MU'ĀKHĀT], ʿUthmān was associated with Abu 'l-Ḥārith b. al-Tayyihān. He took part in the battle of Badr and died in the following year, 3 A.H., but according to other accounts, in the year 4. He was the first Muslim buried in Baḳīʿ al-Gharḳad [*q.v.*]. The affection in which Muḥammad held him was seen in the grief he showed at the sight of his corpse. Nevertheless, Muḥammad is said to have reproved his widow Khuwayla bt. Ḥakīm al-Sulamiyya for using language more natural than theological and for saying that her dead husband was one of the inhabitants of Paradise.

In Tradition, ʿUthmān is the most characteristic representative of the ascetic tendencies which were not entirely foreign to primitive Islam. He abstained from wine before this beverage was prohibited. He neglected his wife, who did not fail to complain to ʿĀ'isha, whereupon Muḥammad tried to divert him from a too rigorous asceticism by suggesting that he should follow his example. The tradition is also very well known according to which he asked Muḥammad to permit him to castrate himself, a request which the Prophet did not at all consider with favour.

(A.J. WENSINCK)

ʿUTHMĀN DIḲNA B. ABĪ BAKR al-Sawākinī, conventionally OSMAN DIGNA, a leader of the Sudanese Mahdiyya [*q.v.*] movement in the 1880s and 1890s. For his career, see BEDJA, at I, 1158b, and KASALA, at IV, 687a, and add to the Bibls. there: R. Hill, *A biographical dictionary of the Sudan*, [2]London 1967, 367-8, 408.

ʿUTHMĀNIYYA, the adherents of a doctrinal stance which originated at the same time and over the same question as Khāridjism and Shīʿism, but which did not survive beyond the 4th/10th century. Its history can be divided into four stages:

1. Loyalism. The stance originated in response to the killing of ʿUthmān [*q.v.*]. Had the rebels done right? The ʿUthmāniyya were those who denied it. ʿUthmān had in their view remained a legitimate ruler whose life it had been wrong to take. "By God, ʿUthmān was killed unjustly (*maẓlūm*[an])" (al-Ṭabarī, i, 3434; cf. 3243.9-12; cf. Ḳur'ān, XVII, 33). They clamoured for ʿUthmān's murderers to be brought to justice and a new caliph to be elected by *shūrā* [*q.v.*] (al-Balādhurī, *Ansāb*, ii, ed. Maḥmūdī, 223, 300, 327; al-Ṭabarī, i, 3277), rejecting ʿAlī's claim to the caliphate on the grounds that he was an accomplice in the murder and/or had seized power without consulting the community (Ps.-Nāshi' in J. van Ess, *Frühe muʿtazilitische Häresiographie*, Beirut and Wiesbaden 1971, §§ 19, 21, 26; al-Balādhurī, *Ansāb*, ii, 226.10; al-Barrādī, *al-Djawāhir*, Cairo 1302, 101; al-Mufīd, *al-Djamal*, tr. M. Rouhani, Paris 1974, 97 ff.). Against them, the rebels argued that ʿUthmān had forfeited his status as *imām* by his innovations in the law (*aḥdāth*) and died as a wrongdoer (*ẓālim*[an]), not as somebody wronged (*maẓlūm*[an]). All the rebels accepted ʿAlī's succession, though the Khāridjites [*q.v.*] held that he, too, subsequently forfeited his position.

Initially, all non-rebels must have been ʿUthmānīs. All Muslims had the choice between loyalism and acceptance of the rebels' cause (Khāridjite or Shīʿite), and though a few allegedly contrived to remain neutral (cf. below, 2), loyalism will have remained what one might call the default position of Islam until *ca.* 700, when the Murdji'a [*q.v.*] appeared, advocating suspension of judgement on the rights and wrongs of the disputed figures. Loyalism was certainly well represented even in ʿIrāḳ. The Baṣrans fought against ʿAlī in the battle of the Camel [see AL-DJAMAL], and refugees from the battle fled to Syria (al-Yaʿḳūbī, *Ta'rīkh*, ii, 215; al-Nawbakhtī, 5); Kūfans and Baṣrans alike left ʿIrāḳ to settle in the Djazīra [*q.v.*] after ʿAlī's victory because they were ʿUthmānīs (al-Balādhurī, *Ansāb*, ii, 297.9; Naṣr b. Muzāḥim, *Waḳʿat Ṣiffīn*, ed. ʿA.-S.M. Hārūn, [2]Cairo 1962, 12, 146; al-Yaʿḳūbī, *Ta'rīkh*, ii, 218; P. Crone, *Slaves on horses*, Cambridge 1980, appendix I, nos. 13, 14, 16, 19); and still more Baṣrans joined Muʿāwiya when al-Ḥasan [*q.v.*] succeeded, having previously kept quiet about their ʿUthmānī views (*Aghānī*[3], xii, 329.5). In the second civil war, too, there was a substantial *shīʿat banī umayya min al-ʿuthmāniyya* in Baṣra (al-Balādhurī, *Ansāb*, ivb, 156.7), and the Baṣrans had a general reputation for ʿUthmānism (*al-baṣra kulluhā ʿuthmāniyya*, al-Aṣmaʿī in Ibn ʿAbd Rabbih, *al-ʿIḳd al-farīd*, ed. Amīn, al-Zayn and al-Abyārī, vi, 248.7) which some put down to the fact that three governors of theirs, including al-Ḥadjdjādj [*q.v.*], had been extreme lovers of ʿUthmān and the Umayyads (Nashwān al-Ḥimyarī, *al-Ḥūr al-ʿīn*, ed. K. Muṣṭafā, Cairo 1948, 230.2). But there were ʿUthmānīs in Kūfa, too (al-Balādhurī, *Ansāb*, v, 229.16,18; 275.18 (cf. also 214.19); xi, ed. Ahlwardt 26.13; idem, *Futūḥ*, 308.3; al-Ṭabarī, i, 3348.16; ii, 342, 636, 659, 765-6; *Aghānī*[3], xi, 251, xiv, 217.5, 231.10, 232.4; al-Zubayr b. Bakkār, *al-Akhbār al-muwaffaḳiyyāt*, ed. S.M. al-ʿĀnī, Baghdād 1972, 465). Some sources claim that Egypt was only converted to ʿUthmānism by Yazīd b. Abī Ḥabīb (d. 128/745-6) or al-Layth b. Saʿd (d. 175/791-2 [*q.v.*]), having previously been ʿAlawī, as people would say by way of contrast with ʿUthmānī; but this is difficult to believe (al-Dhahabī, *Ta'rīkh al-islām*, v, 184; Ibn ʿAsākir, *Ta'rīkh Madīnat Dimashk*, ed. ʿA. al-Shīrī, Beirut 1995-, ix, 42 (s.v. Ismāʿīl b. ʿAyyāsh); Ibn Ḥadjar, *Tahdhīb*, viii, 463-4; J. van Ess, *Theologie und Gesellschaft*, Berlin and New York 1991-7, ii, 719; contrast al-Kindī, *Governors*, 18; al-Ṭabarī, i, 3241-45, 3401, 3408; al-Maḳrīzī, *Khiṭaṭ*, Cairo 1324-6, ii, 337.-4, 338.12. For the term ʿAlawī, see also Ibn ʿAbd Rabbih, *ʿIḳd*, vi, 248.7; al-Balādhurī, *Ansāb*, v, 275.18; al-Fasawī, *al-Maʿrifa wa 'l-ta'rīkh*, ed. A.Ḍ. al-ʿUmarī, Baghdād 1974-76, ii, 807). That ʿUthmānism preponderated elsewhere in the early Umayyad period can probably be taken for granted.

In the first civil war the ʿUthmānīs were led by Ṭalḥa, al-Zubayr and ʿĀ'isha [*q.vv.*] in the Ḥidjāz and ʿIrāḳ, and by Muʿāwiya [*q.v.*] in Syria. The two subdivisions adhered to the same loyalist cause and accepted Muʿāwiya as their sole leader when Ṭalḥa and al-Zubayr were killed, but they did not remain united for long. After Muʿāwiya's death, ʿAbd Allāh b. al-Zubayr opposed the succession of Yazīd b. Muʿāwiya [*q.vv.*], claiming the caliphate for himself when Yazīd died in his turn. Adherents of the Umayyads and the Zubayrids alike continued to stress their

loyalty to ʿU̲th̲mān, but acceptance of the default position no longer implied agreement on contemporary politics. When the sources speak of ʿU̲th̲mānīs in the Sufyānid period and second civil war they usually have the pro-Umayyad party in mind (similarly al-D̲j̲āḥiẓ, *R. al-Ḥakamayn*, ed. Ch. Pellat, in *al-Mas̲h̲rik* [1958], 428.ult., with reference to the Marwānid period). The Umayyads had the advantage of being actual kinsmen of ʿU̲th̲mān's, and most Muslims accepted not only Muʿāwiya but also Yazīd as ʿU̲th̲mān's successors, declaring themselves to be *ʿalā dīn ʿut̲h̲mān, muʿāwiya* or *yazīd* (e.g. *Ag̲h̲ānī*[3], xiv, 231.10; al-Ṭabarī, ii, 342.7, 469.13) and vilifying ʿAlī and/or the K̲h̲āri̲d̲j̲ites with varying degrees of enthusiasm (al-Balād̲h̲urī, *Futūḥ*, 308.4; *Ag̲h̲ānī*[3], xii, 321). A Baṣran youth who would neither declare himself *ʿalā dīn muʿāwiya* nor curse the Muḥakkima was executed (Abu 'l-Aswad al-Du'alī, *Dīwān*, ed. M.Ḥ. Āl Yāsīn, Beirut 1974, 92 ff., no. 47), as was the Kūfan Ḥud̲j̲r b. ʿAdī [*q.v.*] who would openly curse Muʿāwiya in allegiance to ʿAlī (al-Ṭabarī, ii, 115.6). Active supporters of the Umayyad régime were described as *s̲h̲īʿat ʿut̲h̲mān, muʿāwiya* or *banī umayya* (e.g. al-Ṭabarī, ii, 112.3; al-Masʿūdi, *Murūd̲j̲*, iv, 352 = iii, § 1668; al-Balād̲h̲urī, ivb, 156.7). They were men such as Busr b. Abī Arṭāh, Muʿāwiya b. Ḥuday̲d̲j̲ [*q.vv.*] (Ibn Saʿd, vii/2, 130, 195), Mālik b. Mismaʿ [see MASĀMIʿA], Ḥassān b. T̲h̲ābit, Kaʿb b. Mālik and al-Nuʿmān b. Bas̲h̲īr [*q.vv.*] (al-Ṭabarī, i, 3245.11; *Ag̲h̲ānī*[3], xvi, 28.12, 29-30, 228.1, 233-4, where they and other ʿU̲th̲mānīs incongruously address ʿAlī as Commander of the Faithful; Masʿūdī, *Murūd̲j̲*, iv, 284, 297 = iii, §§ 1609, 1623, where they even pay allegiance to ʿAlī). Contrary to what Wellhausen thought (*Kingdom*, 93 n), the ʿU̲th̲mānīs in Kūfa under al-Muk̲h̲tār were Umayyad loyalists, too (see the references to Kūfa given above).

2. Three-caliphs thesis. The Umayyads continued to stress their link with ʿU̲th̲mān in the Marwānid period, but the largely ʿIrāḳī chroniclers now stop calling Umayyad loyalists *ʿut̲h̲māniyya* or a *s̲h̲īʿa* and no longer describe them as in a state of religious obedience (*ʿalā dīn*) to the caliphs. Court poetry apart, all expressions suggesting that the Umayyads and their followers constituted a vehicle of salvation become extremely rare. Instead, the sources begin to speak of ʿU̲th̲mānism as a stance adopted by traditionalists (*aṣḥāb al-ḥadīt̲h̲* [*q.v.*]).

Like their predecessors, the traditionalist ʿU̲th̲māniyya rejected ʿAlī's claim to the caliphate; but unlike them, they were only concerned with past caliphs, not with contemporary rulers. They were distinguished by the conviction that the Rightly Guided Caliphs had been limited to three, namely, Abū Bakr, ʿUmar and ʿU̲th̲mān [*q.vv.*]. "Blood, blood! ʿU̲th̲mān is better", as al-Zuhrī [*q.v.*] would say when he was asked about the relative merits of ʿAlī and ʿU̲th̲mān: ʿAlī had fought Muslims and so could not be a rightly guided caliph or *imām* on whom one should model oneself (al-Fasawī, *Maʿrifa*, ii, 806, where al-Zuhrī seems not even to count ʿU̲th̲mān as a caliph); ʿAlī's reign was *fitna*, as Ibn Ḥanbal and other Bag̲h̲dādī traditionists were later to say (Ps.-Nās̲h̲iʾ, § 113). "When the Prophet was alive and his Companions plentiful, we used to enumerate Abū Bakr, ʿUmar and ʿU̲th̲mān; then we would fall silent", as a famous statement by ʿAbd Allāh b. ʿUmar has it (Ibn Abī Yaʿlā, *Ṭabaḳāt al-ḥanābila*, i, 243.14, cf. 10; al-Buk̲h̲ārī, *Ṣaḥīḥ, K. faḍāʾil al-aṣḥāb, bāb* 4; cf. al-As̲h̲ʿarī, *Maḳālāt*, 458.10,12). The Baṣran His̲h̲ām b. Ḥassān (d. *ca.* 146/763) would similarly enumerate Abū Bakr, ʿUmar and ʿU̲th̲mān and then fall silent. So, too, it is said, would Sufyān al-T̲h̲awrī [*q.v.*] in Kūfa and Mālik b. Anas [*q.v.*] in Medina (al-Fasawī, ii, 806-7; cf. van Ess, *Theologie*, i, 224-5, on the many positions ascribed to Sufyān). It was apparently from Mālik that Ismāʿīl b. Dāwūd al-D̲j̲awzī learnt the three-caliphs thesis, which he is said to be the first to circulate in Bag̲h̲dād (cf. Madelung in *Isl.*, lvii [1980], 223-4). The many traditionalist scholars known to have been ʿU̲th̲mānīs include Ḥammād b. Zayd and others who died between 151/768 and 186/802 in Baṣra (Ibn Saʿd, vii/2, 24, 42, 44, 45; cf. also van Ess, *Theologie*, ii, 64), the notorious historian Sayf b. ʿUmar (d. 180/796) and others in Kūfa (cf. Crone in *JSS*, vi [1996], 237 ff.; van Ess, *Theologie*, i, 216, cf. 235; Ibn Ḥa̲d̲j̲ar, *Tahd̲h̲īb*, v, 25-6, vii, 127, x, 270), as well as Ibn Maʿīn (d. 233/847-8), Abū K̲h̲ayt̲h̲ama (d. 234/848-9) and, for much of his life, Aḥmad b. Ḥanbal [*q.v.*] in Bag̲h̲dād (Ps.-Nās̲h̲iʾ, § 113; W. Madelung, *Der Imam al-Qāsim ibn Ibrāhīm und die Glaubenslehre der Zaiditen*, Berlin 1965, 225). Traditions singling out Abū Bakr, ʿUmar and ʿU̲th̲mān as true caliphs, *imāms* to be imitated or the most meritorious men after the Prophet, with pointed silence about ʿAlī, are widely diffused in the literature (T. Nagel, *Rechtleitung und Kalifat*, Bonn 1975, 229-30).

The traditionalist message seems to have been that the guiding role taken by the leader of the *umma* in the time of the Prophet and the first caliphs had come to an end with the killing of ʿU̲th̲mān. "Today prophethood/the caliphate was taken away from Muḥammad's community and it became kingship and tyranny", as a Baṣran tradition declares with reference to his death (Ibn Abī S̲h̲ayba, *al-Muṣannaf*, ed. ʿA.-K̲h̲. al-Afg̲h̲ānī, ʿA.ʿA. al-Aʿẓamī and M.M. al-Nadwī, Bombay 1386-1403, xiv, no. 18936). All leaders of the Muslim polity thereafter were simply heads of state; religious knowledge was now dispersed in the community, and keeping the community together was more important than ensuring the moral rectitude of its head. Rulers were necessary in order to uphold the law and preserve the community, and one should avoid civil strife, suffering death rather than letting oneself be embroiled in internal fighting: "Be the servant of God's who is killed, not the one who is the killer", as a famous tradition has it. When the Baṣrans of the later Umayyad period are described as ʿU̲th̲mānīs, the reference is not to Umayyad loyalists but rather to traditionalists who believed in abstention from fighting (*al-kaff*), adducing the *kun ʿabd allāh al-maḳtūl* tradition (*Ak̲h̲bār al-dawla al-ʿabbāsiyya*, ed. ʿA.-ʿA. al-Dūrī and ʿA.-D̲j̲. al-Muṭṭalibī, Beirut 1971, 206; al-Muḳaddasī, 293.19; Ibn al-Faḳīh, 315, all citing a statement of Muḥammad b. ʿAbd Allāh reminiscent of al-Aṣmaʿī's; cf. also al-Balād̲h̲urī, *Ansāb*, iii, 81; al-D̲j̲āḥiẓ, *R. Manāḳib al-turk*, in his *Tria opuscula*, ed. G. van Vloten, Leiden 1903, 9, tr. Harley Walker in *JRAS* [1915], 643). The ʿU̲th̲mānīs were also among the many traditionalists who would invoke as members of their own ranks ʿAbd Allāh b. ʿUmar, Saʿd b. Abī Waḳḳāṣ, Muḥammad b. Maslama, Kaʿb b. Mālik (elsewhere an ʿU̲th̲mānī in the sense of Umayyad loyalist) and others who had allegedly sought neutrality in the first civil war (Masʿūdī, *Murūd̲j̲*, iv, 295-6 = iii, § 1621; cf. al-Ṭabarī, i, 3070; Nagel, *Rechtleitung*, 226-7; P. Crone and F. Zimmermann, *The Epistle of Sālim b. Dhakwān*, Oxford forthcoming, ch. 6).

3. Positions within the four-caliphs consensus. Traditionalist ʿU̲th̲mānism changed character, and eventually disappeared, with the spread of the four-caliphs thesis. Already Nūḥ b. Abī Maryam (d. 173/789-90) and Ibn al-Mubārak (d. 181/797 [*q.v.*])

are said to have accepted four caliphs, though Ibn al-Mubārak is credited with the 'Uthmānī three-caliphs thesis too (al-Sarakhsī, *Sharḥ Kitāb al-siyar al-kabīr li 'l-Shaybānī*, ed. Ṣ.-D. al-Munadjdjid, Cairo 1971-2, i, 157-8; Ibn Abī Ya'lā, *Ṭabaḳāt al-ḥanābila*, ii, 40.13; Nagel, *Rechtleitung*, 229). In any case, the four-caliphs thesis had practically swept the board in 'Irāḳ by the middle of the 3rd/9th century (Ps.-Nāshi', §§ 88-9, 109-11; cf. Madelung in *Isl.*, lvii [1980] on the date of this work). It was only in Baghdād that it continued to be vigorously, though not unanimously, opposed (*ibid.*, §§ 113-14; cf. van Ess, *Theologie*, iii, 189-90). Ibn Ḥanbal eventually came round to it (Madelung, *Qāsim*, 225 ff.), but his adherents do not all appear to have followed him, for the extreme traditionalists (*ḥashwiyya, nābita*) who positively revered Mu'āwiya and Yazīd I can hardly have accepted 'Alī as a legitimate caliph (cf. Pellat, in *SI*, vi [1956]; *AIEO, Alger*, x (1952); cf. also al-Khayyāṭ, *al-Intiṣār*, ed. and tr. A.N. Nader, Beirut 1957, § 102), and it was precisely because the Ḥanbalīs were excessively fond of Mu'āwiya that the 4th/10th-century al-Muḳaddasī [*q.v.*] found it impossible to include them in the great majority destined for salvation (39.7, 126.14, 365.12, 378-9). But this and other pockets of resistance (notably in Syria) notwithstanding, it is clear that people were rapidly coming to accept both 'Uthmān *and* 'Alī as rightly guided caliphs unless they chose to remain Khāridjites or Shī'ites. In terms of past *imāms*, Sunnism was taking over as the default position of Islam.

But the mostly Kūfan soft Shī'ites who were persuaded to accept 'Uthmān as the third caliph found it impossible to go so far as to deem him to have been a better person then 'Alī, though a caliph was normally assumed to be the most meritorious person (*al-afḍal*) in his time. In terms of merit, their list of *imāms* thus continued to run Abū Bakr, 'Umar and 'Alī, with 'Uthmān tagged on at the end (Ps.-Nāshi', § 110; compare al-Khaṭīb al-Baghdādī, *Ta'rīkh Baghdād*, vii, 258.1, xii, 409.7). An 'Uthmānī now came to be someone who held 'Uthmān to have been more meritorious than 'Alī, insisting that each caliph had been the most meritorious man in his own time, the order of merit and succession being identical (cf. *Ta'rīkh Baghdād*, ii, 367.8, 11, 15, and 369.10). Pseudo-Nāshi' (§ 29) may have this development in mind when he says that the 'Uthmāniyya are now "joined to Murdji'a", Murdji'ites to him being people who accepted 'Alī as the fourth caliph without having a special preference for either him or the Umayyads. All Sunnīs are 'Uthmānīs in this extenuated sense.

But there were also soft Shī'ites who held 'Alī to have been more meritorious than all the caliphs who preceded him, including Abū Bakr, whose caliphate they nonetheless accepted on the grounds that the less meritorious person (*al-mafḍūl*) was sometimes better suited for the task (thus some Zaydīs and Mu'tazila [*q.vv.*], cf. Ps.-Nāshi', §§ 68, 94). In debate with such people an 'Uthmānī was somebody who defended Abū Bakr's superior merit. The one example of this usage is al-Djāḥiẓ's epistle *al-'Uthmāniyya* (ed. 'A.-S.M. Hārūn, Cairo 1955; cf. Pellat, in *Arabica*, iii [1956]; Nouiouat, in *REI*, lv-lvii [1987-9], 146 ff.), which was refuted by the Zaydī Mu'tazilī al-Iskāfī [*q.v.*] (d. 240/854) and a number of Imāmī Shī'īs, including al-Mas'ūdī (*Murūdj*, vi, 56 ff. = iv, §§ 2281-2). One might have expected Abū Bakr's supporters to have been known as Bakriyya or Babkariyya, but a new coinage was apparently felt to be unnecessary: whoever upheld the merits of the first three caliphs against excessive claims on behalf of 'Alī was an 'Uthmānī whether he focused on Abū Bakr, 'Umar or 'Uthmān, it would seem. All Sunnīs are 'Uthmānīs in this sense, too.

4. Pro-Umayyad sect. As traditionalist 'Uthmānism disappeared in Sunnism, the pro-Umayyad variety resurfaced. In 324/935-6 al-Mas'ūdī came across a book in the ownership of an 'Uthmānī client of the Umayyads in Tiberias (*Tanbīh*, 336-7). Entitled *Kitāb al-barāhīn fī imāmat al-umawiyyīn*, it defended the Umayyad claim to the imāmate, listed the virtues of the caliphs and enumerated every one of them from 'Uthmān to Marwān II, arguing that the latter had designated (*naṣṣa 'alā*) 'Abd al-Raḥmān I as his successor. It listed the Spanish Umayyads, too, down to the year 310/922-3, concluding with 'Abd al-Raḥmān III. The latter had acceded in 300/912, but he only adopted the caliphal title in 316/929 (D. Wasserstein, *The Caliphate in the West*, Oxford 1993, 10 ff.), so the book was apparently composed in ignorance of the restoration of the Umayyad caliphate (*pace* Nagel, *Rechtleitung*, 252-3). It was in any case a statement by the *shī'at al-'uthmāniyya* (*Tanbīh*, 337.4) as a sect in the old style, that is, a party defined by allegiance to a politico-religious leader by whom it saw itself as guided along the right path. Whether the party had any law and doctrine of its own is unknown, though it is tempting to credit it with much the same views as the Baghdādī Ḥashwiyya notorious for their veneration of the Umayyads. 'Uthmānī devotees of the Umayyads are also mentioned in 4th/10th-century Kūfa, where they had a mosque of their own (*Aghānī*[3], xi, 251). But that is the last we hear of them.

UTHŪLŪDJIYĀ (A., a rendering of Grk. θεολογία) refers to the so-called "Theology of Aristotle", which consists in reality of extracts from the *Enneads* of Plotinus. The work is important not only in its own right but as illustrating a syncretic tendency in Arabic-Greek scholarship. In this context, F. Rosenthal notes "the almost complete absence of the name of Plotinus from Arabic literature". This can be attributed as much to textual corruption as to the mixture of fact and fantasy in the histories of the philosophers. Rosenthal criticises the suggestion of a confusion between the transliterations of Plato and Plotinus, arguing that "Plotinus" in Arabic should be Flūṭīnus, a name found by al-Nadīm in a list of philosophic commentators. Rosenthal suggests this as an emendation for al-Ḳifṭī's Flūṭīs, were this to refer to Plotinus, and a similar emendation could be applied to a reference in Ḥadjdjī Khalīfa. The argument does not give value to the Arab tendency to shorten Greek names, but whether or not Plotinus is submerged in the shadow of Plato, his real importance for Arabic philosophy lies in his identification as the author of an Arabic translation of what was claimed to be a commentary by Porphyry on "the book of Aristotle the philosopher which is known in Greek as *Uthūlūdjiyā*" [see AL-SHAYKH AL-YŪNĀNĪ].

A translation of this text was made by 'Abd al-Masīḥ b. 'Abd Allāh b. Nā'ima al-Ḥimṣī and corrected for Aḥmad, the son of the caliph al-Mu'taṣim

(218-27/833-42 [*q.v.*]) by Yaʿḳūb b. Isḥāḳ al-Kindī. The work was dated by Dieterici to A.D. 840. Baumstark showed that the Arabic was based on a Syriac version, and the manuscript tradition of the work, together with a number of its translations, was covered by Steinschneider. A Latin translation by Petrus Nicolaus Faventinus was published in Rome in 1519, while the first edition of the text itself, edited by Dieterici, was brought out at Leipzig in 1882. In 1883 Valentin Rose identified the material as being derived from the *Enneads* of Plotinus. Further material from the *Enneads* was supplied in 1941 by Kraus from an Egyptian ms. containing a *Risāla fī 'l-ʿilm al-ilāhī* attributed to al-Fārābī, while Rosenthal, introducing *Ennead* fragments from an Oxford ms., postulated a "Plotinus source", "compiled either as a Greek textbook of Plotinian thinking or for translation purposes".

The importance of the work has not finally been assessed. Kraus rightly dismissed as exaggerated claims that it was the principal cause of the "hybrid" character of Arab philosophy, but, as Kraus himself points out, it was used by al-Fārābī in his attempt to reconcile the views of Plato and of Aristotle, as well as by Ibn Sīnā, who doubted the authenticity of its attribution to Aristotle, and also by al-Rāzī. It was known to the Ikhwān al-Ṣafāʾ in the second half of the 4th/10th century and attributed to Plato by al-Suhrawardī al-Maḳtūl. Nyberg noted it in connection with Ibn al-ʿArabī and Kraus refers to its influence on extremist Shīʿī sects.

Amongst the subjects included in the work is "the first cause" together with "the world of the intellect", "the descent of the natural soul into the corporeal world", "the casting off of the body" and "the progress from the world of the intellect to the divine world". Its value, however, lies not in its details but in the fact that it can be seen to add the unchallenged philosophical authority of Aristotle to the extension of an investigative technique based on logic and verifiable observation to fields where the restraints on speculation can progressively be relaxed.

UTRĀR, Otrār, a town of mediaeval Islamic Central Asia notorious for its role in the irruption of the Mongols into the Islamic world. It lay on the right bank of the Sir Daryā or Jaxartes just to the south of the confluence with it of the Aris river. It is not found in geographical texts till the early 7th/13th century and Yāḳūt's *Buldān*, ed. Beirut, i, 218, who has Uṭrār or Utrār. It may possibly be mentioned in al-Ṭabarī, iii, 815-16, year 195/810-11, but the reading here is doubtful, see M. Fishbein (tr.), *The History of al-Ṭabarī, XXXI. The war between brothers*, Albany 1992, 71-2 and n. 292.

In the history of the rise of the Mongols, Čingiz Khān's territories came to march with those of the Khʷārazm Shāhs after Čingiz had killed his rival Küčlüg and added the lands of the Ḳara Khitay [*q.v.*] to his empire. The Shāh ʿAlāʾ al-Dīn Muḥammad had acquired Utrār from the Ḳara Khitay, but in 606/1210 had had to quell a revolt by the local ruler left there, the Ḳara Khānid [see ilek-khāns] Tādj al-Dīn Bilge Khān. By 615/1218 the Khʷārazmian governor of Utrār was Ghayïr or Ḳayïr Khān Inalčïḳ. In that year, a caravan of 450 Muslim merchants arrived in Utrār from Čingiz's territories. The governor considered them, no doubt correctly, as spies, massacred them and seized their wares. A mission of protest from Čingiz to the Shāh was humiliated and rejected, which made war between the two powers inevitable. Probably in the early autumn of 1218, a Mongol army appeared before Utrār, besieged it and captured it after some months, seizing and eventually executing Ghayïr Khān Inalčïḳ. Before the citadel had fallen, a representative of the civilian official classes within the town, Badr al-Dīn ʿAmīd, had already gone over to the Mongols. From Utrār, Čingiz then diverted his military forces for the overrunning of all Transoxania.

Utrār, like other towns ravaged by the Mongols, soon revived, for local *maliks* or governors minted coins there (see Zambaur, *Die Münzprägungen des Islam*, i, Wiesbaden 1968, 38). Tīmūr was there with his grandson Ulugh Beg, preparing for the China expedition, when he died on 17 Shaʿbān 807/18 February 1405; and it was still flourishing in 859/1455 when there was a rebellion in Utrār, supported by the Khān of the Uzbeks, against the Tīmūrid Abū Saʿīd. But thereafter it fell into decay, and its site is now marked only by ruins (in the southernmost part of the modern Kazakh Republic).

al-UṬRŪSH [see ḥasan al-uṭrūsh].

UTSMI [see ḳaytaḳ].

ʿUTŪB, a term (sing. ʿUtbī) which, in its most strict sense, refers to communities of Nadjdī origin, probably from different tribal stocks, who in the 17th century moved to the Gulf coast and settled, after various intermediary settlements, in Kuwayt and Baḥrayn. A popular etymology is from the verb *ʿataba* "to arrive at the threshold", in this case indicating arrival on the coast. The appelation Banū ʿUtūb is sometimes used but would seem to be a misnomer, since the ʿUtūb are not a genealogically organised tribe but a community of different tribal groups in a loose confederation. Oral tradition among the Āl Khalīfa has their original home in al-Hadār in Eastern Nadjd (Āl Khalīfa 1996: 35, 242, 246) and

gives the reason for their original move as friction with other related clans.

The leaders of the 'Utūb were the three clans of the Āl Khalīfa, Āl Ṣubāḥ and Djalāhima, of which the first two are now the ruling families of Baḥrayn and Kuwayt respectively. All three claim descent from the 'Aneza or 'Anaza [*q.v.*] through the Djumayla. Also included in the confederation are the Āl Zāyid (now Āl Ghānim), the Āl Ṣāliḥ and the Āl Shamlān (Dickson 1956: 26). Lorimer (1908-15, ix, 1917-18) mentions the three leading clans plus the Āl Fāḍil. Rush (1987: 233 ff., 196 ff.) mentions oral traditions which also include among them elements of Tamīm and Sulaym b. 'Alī, presumably the Ma'āḍīd (see below). The same oral tradition was reported to the present writer by Shaykh Ḥasan b. Muḥammad b. 'Alī Āl Thānī of Ḳaṭar. This movement and the associated settlements coincided with other large scale movements of individual clans and whole tribes from Central and Western Arabia eastward. In particular, one can mention that of the Ma'āḍīd clans of Tamīm origin who settled the Ḳaṭar peninsula, the Muṭayr, 'Awāzim and Rashāyida tribes who moved over from western Nadjd to the region of Kuwayt, and the Banū Ka'b and allied clans who occupied Khūzistān in south-west Persia.

The early movements of the 'Utūb as related by Rush, depending on local oral tradition and documentary evidence, are as follows. They left al-Hadār in the Aflādj region of Nadjd in about 1674. Rush considers that they may have moved at the same time as the Fuḍūl in consequence of the legendary Djarmān famine. Following difficulties with local tribes, they then moved in about 150 boats, carrying their families and livestock to the protection of the Ottoman governor of Baṣra. They then moved to Kuwayt, or Grain as it was then called (Grane on old English maps), at the head of the Gulf, where they settled as clients of the Barrāk b. 'Uray'ir of the Banū Khālid, then ruler of Eastern Arabia.

Like the Ma'āḍīd, they soon became known as a sea-faring group whose prosperity was based on pearling, pearl trading and sea trade. The maritime nature of their power base is vividly illustrated by a conversation reported in Āl Khalīfa (1997: 19) between Bishr the son of the Djalāhimī Rḥama b. Djābir (see below) and Turkī b. 'Abd Allāh b. Su'ūd in Dar'iyya in 1830, when the latter asked whether the 'Utūb rode horses, to which Bishr replied "Our sons ride horses for amusement in their gardens, but our mount in which we take pride can carry a hundred warriors", meaning the *khashab*, as the 'Utūb called their boats.

The rise in the sea power and prosperity of the 'Utūb, Ka'b and Ma'āḍīd coincides with the demise of the Hwila under their leaders the Ḳawāsim [*q.v.*], who now remain in power as the rulers of Sharjah [see AL-SHĀRIḲA] in the Emirates. The Hwila had dominated the Gulf sea routes under the loose suzerainty of the Banū Khālid of al-Ḥasā, both being considered subjects of the Ottomans. The Hwila were present on both sides of the Gulf but had their main centres on the Persian side, while the 'Utūb had their centres on the Arab side. The rise of the 'Utūb therefore represents a rise in importance of the Arabian side of the Gulf, linked with the rising influence of the Āl Su'ūd. At the same time, while the Zand rulers of southern Persia had their capital in Shīrāz, the subsequent Ḳādjār rulers had moved their capital to the north in Tehran and took much less interest in the affairs of the south, so that the Arab *shaykhs* who dominated the Persian shore were left to their own devices. It may also be that the capture of Baṣra by the Persians in 1776-9 and the famine there a few years later was a stimulus in the rise in influence of these Arab maritime states.

The earliest European reference to them is in Van Kniphausen (1756), translated in Rush, 1987: 230, "They [the people of Kuwayt] are independent of the Shaykh of the desert (*presumably Ibn 'Uray'ir, BI*) to whom they pay a small contribution... Several different shaykhs rule them who all live in relative harmony. The principal is Mobarek Eben Saback, but because this one is poor and still young, another called Mahometh Eben Khalifah, who is rich and possesses many vessels, enjoys equal respect among them". Although the exact movements of the 'Utūb in the early stages depend mainly on oral report, later movements are better documented. Most authorities agree on the following. In Kuwayt the three clans are recorded as present in 1756, having arrived in 1716. Part of the Āl Khalīfa then went to Zubāra in Ḳaṭar in 1765. Then in 1783 they sailed to Baḥrayn and wrested that island from the Zand. Most of the Djalāhima seem to have left Kuwayt after the Āl Khalīfa in the 1760s, though some stayed behind, known today as al-Nuṣf (Rush 1987: 196 ff., 10). The Āl Khalīfa at that stage retained control of the Ḳaṭar peninsula, but were eventually replaced by the Ma'āḍīd under their leaders of the Āl Thānī, who are the present rulers of the state of Ḳaṭar.

The political structure of the 'Utūb confederation was said to be as follows: the wealthy Āl Khalīfa were in charge of pearling and trade, the Djalāhima organised ships and naval defence, while the Āl Ṣubāḥ provided the governor who imposed law and order and handled relations with the Banū Khālid and the shepherd tribes of the interior.

One of the most colourful members of the 'Utūb was Rḥama b. Djābir b. 'Adhbī of the Djalāhima, a near relative of the Āl Khalīfa, who carried on a lifelong vendetta with them which is intimately involved with the history of the 'Utūb as a group and illustrative of the nature of the confederation. When the Āl Khalīfa left Kuwayt, the Āl Subāḥ were left impoverished, they therefore "refused the Yalahimah (Jalahimah) their share of the revenue and ultimately expelled them from Kuwait. The Yalahimah tribe sought and ultimately obtained the protection of their kinsmen (Al-Khalifa) at Zobara; to each according to his rank was assigned an adequate income. In a few years they renewed their claim to rights founded on their original compact, which they were not, however, in a position to inforce. Urged by necessity and a sense of wrong, the Yalahimah quitted Zobara, and took up residence at Raveish, a barren spot at a short distance eastward with the intention of revenging themselves." (Bombay Government, 1856, vol. xxiv, 363). Rḥama's anger seems particularly to have arisen from his exclusion, by the Āl Khalīfa, from a share of Baḥrayn. Born in Kuwayt, but based alternatively at Būshihr, Khōr Ḥassān in Ḳaṭar and at nearby Dammām, and at one period as a subject of the Saudi state, he ranged the Gulf with a large fleet and a force of about 2,000 men, attacking the Āl Khalīfa and Āl Subāḥ and their allies but considering himself an ally of the British or at least studiously avoiding them. He died finally in 1826 when, defeated and in danger of capture by the Āl Khalīfa, he blew up his ship with himself and his infant son in it. A graphic eye witness description of Rḥama b. Djābir occurs in Buckingham (1830, ii, 124-5).

It is worth mentioning that the Arabic dialect of

the descendants of the ʿUtūb in Kuwayt and Baḥrayn, with that of the Maʿāḍīd of Ḳaṭar and the dialect of the Emirates, forms a distinct type, although with considerable differences from area to area. This East Arabian dialect type is an offshoot of the Central Nadjdī type, and is distinguished from it on the one hand, and from the dialect of the earlier coastal settlers, the Hwila, the Ḥasāwīs (inhabitants of the Ḥasā oasis) and the Baḥārina the earlier Shīʿī population of Baḥrayn, on the other. The dialect type is described amply in Johnstone (1967), the main common characteristics being change of Old Arabic *djīm* to *y* as in *masyid* "mosque" and *maylas* "madjlis", change of *ḳāf* and *kaf* to *c* and *ǧ* in fronting environments as in *cidi* "thus" and *ǧidr* "pot" and the restructuring of syllables ending with one of the guttural group *kh*, *gh*, *ʿ*, *ḥ* and *h* as in *Ikhadar* < *ʾakhḍar* "green", *mgharib* < *maghrib* "sunset", "*aray*" < *ʾaʿray* "lame", "*ḥamar*" < *ʾaḥmar* "red" and *ghawa* < *gahwa* "coffee". This commonalty of dialect supports the tradition of the ʿUtūb themselves as to their Nadjdī origins.

UWAYS, the name of two rulers of the Djalāyirids [*q.v.*], a dynasty of Mongol origin which succeeded to the heritage of the Il Khānids in ʿIrāḳ and Ādharbaydjān.

1. Shaykh Uways (I) b. Ḥasan-i Buzurg (r. 757-76/1356-74), was the son of the founder of the line and of the Čopanid princess Dil-Shād Khātūn bt. Dimashḳ Khʷādja b. Čopan. Succeeding to power on his father's death, he probably also brought under his control the fiefs allotted to his brother Sulṭān Ḥusayn when the latter died in 760/1359. Uways made Baghdād his capital, at first acknowledging the suzerainty of the Mongols of South Russia and the Caucasus. The Golden Horde Khān Djānī Beg had extended his authority over Ādharbāydjān, but his son Berdī Beg was unable to maintain his power over the unruly local Turco-Mongol *amīrs*, and in 760/1359, after an abortive attempt by himself and by the Muẓaffarid of Yazd Mubāriz al-Dīn Muḥammad, Uways managed to capture Tabrīz, which his father had lost twenty years earlier. Uways also successfully extended Djalāyirid suzerainty during the years 762-5/1361-4 over the Muẓaffarids [*q.v.*] of Iṣfahān, Yazd and Fārs, where Muẓaffarid princes were quarrelling over succession to the deposed Mubāriz al-Dīn Shāh-i Shudjāʿ b. Muḥammad [*q.v.*].

The later years of his reign were, however, more filled with difficulties. He quelled the revolt in 765/1363-4 of his governor in Baghdād, Khʷādja Mardjān, but more of a long-term threat were the Turkmen Ḳara Ḳoyunlu [*q.v.*] of south-eastern Anatolia, the eventual supplanters of the Djalāyirids in the early 9th/15th century. In spring 767/1366 Uways marched westwards against this enemy, securing Mawṣil, Mūsh and Mārdīn before wheeling round to Ādharbāydjān in order to ward off an attack on the Djalāyirid province of Ḳarabāgh [*q.v.*] by the Shirwān Shāh [*q.v.*] Kay Kāwūs b. Kay Ḳubādh. Kay Kāwūs was captured and brought back in chains to Baghdād, but released and restored to power as a Djalāyirid vassal (thus attested by coins which were then minted in Shirwān acknowledging Uways).

In 772/1370 the local ruler in Gurgān, Amīr Walī, successor there after the death of Togha Temür [*q.v.*], attacked Djalāyirid lands in northern Persia but was defeated near Rayy. Uways took the field personally against him in 773/1371, but Amīr Walī was able to occupy Sāwa [*q.v.*]. Uways was preparing a fresh expedition when he died at Tabrīz on 2 Djumādā I 776/9 October 1374 at the age of thirty, so that Djalāyirid attempts to expand eastwards through Persia collapsed. His reign was in fact the high-point of Djalāyirid fortunes, and the dynasty's decline set in after his death.

Uways was the greatest of the Djalāyirid rulers, both as a military commander and as an enthusiastic patron of literature and the arts, being himself a poet, calligrapher and painter. Amongst his eulogists was the poet Salmān-i Sāwadjī [*q.v.*], whilst his court historian Abū Bakr al-Ḳuṭbī al-Āharī wrote for him the general history *Tārīkh-i Shaykh Uways* (see Storey, i, 1233, 1269-70).

Coins of Uways are known from a wide variety of mints, from Bākū in the north to Ḥilla and Baṣra in the south; almost all of them mention the Rightly-Guided Caliphs, i.e. there is very little evidence that Uways had Shīʿī sympathies.

2. Uways (II) b. Shāh Walad (r. 814-24/1411-21), great-grandson of Uways I, whose mother was the Djalāyirid princess Tandu. Since he came to power as a mere boy, Naṭanzī describes Tandu as his *wazīr*. His sphere of power was limited to Lower ʿIrāḳ and Khūzistān as a vassal of the Tīmūrid Shāh Rukh, until he was killed by the Turkmen chief Shāh Muḥammad in 824/1421; a decade later, Lower ʿIrāḳ was to pass under Ḳara Ḳoyunlu authority.

Album, *A checklist of popular Islamic coins*, Santa Rosa, Calif. 1993, 49. (C.E. Bosworth)

UWAYS al-**ḲARANĪ**, a legendary or semi-legendary younger contemporary of Muḥammad, said to have been killed at the battle of Ṣiffīn in 37/657, fighting on the side of ʿAlī. The *nisba* al-Ḳaranī connects him with the Ḳaran sub-group of the Yemeni tribe of Murād [*q.v.*], and legend puts his early life in the Yemen. Uways first appears in the works of writers of the 3rd/9th century, Ibn Saʿd and Aḥmad b. Ḥanbal, as an impoverished and ragged figure who chose to live a life of solitude. Muḥammad had allegedly foretold that Uways would come to see his second successor, ʿUmar, and said that Uways was both his bosom friend (*khalīl*) in the Muslim community and the best person in the generation after him. These sayings gave rise to the subsequent legend, presented at length in the *Tadhkirat al-awliyā'* attributed to ʿAṭṭār (d. 618/1221), that Muḥammad and Uways corresponded by telepathy, a legend that is the basis of the Ṣūfī tradition of the Uwaysiyya [*q.v.*]. Thus Uways is a much-venerated figure in Ṣūfism and in popular Islam, with tombs in various places, notably at al-Raḳḳa in Syria and near Khīwa in modern Uzbekistan.

One might mention that the curious Turkish name Weysel (as in ʿĀshıḳ Weysel) comes from (Ü)weys el(-Ḳaranī).

Bibliography: A.S. Hussaini, *Uways al-Qaranī and the Uwaysī Sufis*, in *MW*, lvii (1967), 103-13; J. Baldick, *Imaginary Muslims. The Uwaysi Sufis of Central Asia*, London 1993, 15-21. (J. Baldick)

UWAYSIYYA, a class of mystics who look for instruction from the spirit of a dead or physically absent person.

The term is derived from the name of Uways al-Ḳaranī (d. 37/657 [*q.v.*]), who is supposed to have communicated with Muḥammad by telepathy. Another important figure in the Uwaysī tradition is Abu 'l-Ḥasan ʿAlī b. Aḥmad al-Kharaḳānī (d. 425/1033 [*q.v.*]), who is presented as constantly visiting the tomb of Abū Yazīd al-Bisṭāmī [*q.v.*] and being taught by his spirit. Al-Kharaḳānī is also recorded as having claimed to be taught directly by God; this is a further aspect of the Uwaysī tradition. The famous poet Ḥāfiẓ of Shīrāz (d. 791/1389 or 792/1390 [*q.v.*]) is described by an Indian visitor as being an Uwaysī (cf. J. Baldick, *Imaginary Muslims. The Uwaysi Sufis of Central Asia*, London 1993, 21-5, where further references are given).

From the 8th/14th century onwards, the Uwaysī tradition acquires a new significance in the Naḳshbandī brotherhood. Its founder, Bahā' al-Dīn Naḳshband (718-91/1318-89 [*q.v.*]) is said to have been taught by the spirit of an Uwaysī master, ʿAbd al-Khāliḳ Ghudjduwānī (d. 617/1220 [*q.v.*]). Bahā' al-Dīn's successors claimed that some other figures in his spiritual genealogy, stretching back to Muḥammad, had been Uwaysīs, i.e. taught by Muḥammad or by dead Ṣūfīs (*ibid.*, 25-6).

There seems to have been an Uwaysī movement in East Turkistan in the 10th/16th century, begun by one Khwādja Muḥammad Sharīf (d. 963/1555-6). This movement apparently gave rise to the composition of an imaginary history of the Uwaysīs, written in Persian around 1600 by one Aḥmad b. Saʿd al-Dīn Uzganī, of Uzgend in what is now Kyrghyzstan, and entitled *Tadhkira-yi Bughra-khānī* in honour of the Ḳarakhānid ruler Satuḳ Bughra Khān (d. 344/955) (English summary from the manuscripts, in Baldick, *Imaginary Muslims*, 54-201). In the history, an evidently imaginary Uwaysī brotherhood is presented as flourishing from the 1st/7th to the 8th/14th centuries. The book consists of a series of biographies, usually of people who never existed. Each person is instructed, in the Uwaysī manner, by a prophet or leading early Muslim, and is said to be "on the heart" or "on the back" of one of the prophets. Here, the point is that the mystic must resemble the prophet in question: this resemblance, Uzganī emphasises, is especially strong when the mystic is on the prophet's back. Thus a mystic who is "on the back of Jacob" sees angels, weeps a lot and goes blind, one who is "on the back of David" is a singer and sinfully causes the death of a man, and so on; the biographies are modelled on the lives of the prophets in the *ḳiṣaṣ al-anbiyā'* [*q.v.*] literature, much read in Central Asia. In this way, the reader is led to decode the biographies as adaptations of the prophets' lives already familiar to him; the book, as its author explicitly makes clear, must be constantly read by the reader to help him become an Uwaysī master himself. The Uwaysīs, Uzganī explains, enjoy a special anonymity; only God knows who they are. If they appear as practising Ṣūfīs in this world, they nonetheless obtain their instruction from an invisible source.

One very important Uwaysī was the famous Indian reformer Shaykh Aḥmad Sirhindī (971-1034/1564-1624 [*q.v.*]), who was also a member of the Naḳshbandī brotherhood. After studying with a Naḳshbandī master, he tells us, he became an Uwaysī, in the sense of no longer having a visible instructor but learning directly from Muḥammad. In addition to this he was instructed by God himself (Baldick, *op. cit.*, 26).

The pen-name Üweysī (= Uwaysī) is used in a long Ottoman Turkish poem which dates from the reign of Murād IV (1032-49/1623-40) and attacks the degeneracy of the empire, along with the jurists, administrators and Ṣūfīs of the day. In contrast, the poet extols the many hidden "friends of God". He claims that his spirit has always served to help God manifest himself, and that he knows God's secrets (*ibid.*, 26-7, and see waysī).

In 20th-century Iran, there has been a new Uwaysī movement, in a conscious reaction to the brotherhoods and their elders. This movement has centred around Muḥammad ʿAnḳā (1306-82/1887-1962) and his son. It has been characterised by attempts to improve Ṣūfism by integrating with it modern Western findings in the natural sciences. Under the reign of Muḥammad Riḍā Shāh (1941-79 [*q.v.*]) its meetings were attended by members of the Imperial court. Since the revolution of 1978-9, the movement's activities have been continued in exile; based in the U.S.A., it has established branches in many other countries.

(J. Baldick)

ÜWEYS, Ḳara, with the titles of *Defterdār* or controller of finances [see daftardār], Čelebi and Pasha, leading official of the Ottoman administration during the reign of Sultan Murād III [*q.v.*], d. 999/1591.

Son of the *ḳāḍī* Nāẓir Muḥyī 'l-Dīn Meḥmed, from an old-established family of scholars in Aydîn, he was educated as an *ʿālim* and administrator, becoming *ḳāḍī* of Tire, having been picked out by Murād, at that time still an "imperial prince" (*shehzāde*) and governor

of Manisa, as his personal *defterdār*. When Murād was in 982/1574 summoned to Istanbul as successor to Selīm II, Üweys accompanied him, together with his *khodja* Sa'd al-Dīn, his *sheykh* Shudjā' al-Dīn and his close intimate Shemsī Aḥmed Pasha, from the ancient line of the Isfendiyār Oghullari [*q.v.*], with the aim of wresting control in the state from the all-powerful vizier of the two previous reigns, Ṣokollu Meḥmed Pasha [*q.v.*]. The latter opened hostilities in Shawwāl 982/February 1575 by arranging an accusation against Üweys of financial irregularities whilst travelling from Manisa to Istanbul, but through Shemsī Pasha's protection, he speedily became head of the second section of the financial department (*shikk-i thānī defterdārī*) and then *bashdefterdār* or supreme head after the removal of Ṣokollu Meḥmed's protégé and previous holder of that office, Lālezār Meḥmed Čelebi.

Growing in influence with the sultan as those associated with the previous régime were gradually eliminated, he became a *pasha* when he replaced the Grand Vizier's cousin Muṣṭafā Pasha, *beglerbeg* of Budun when the latter was executed, and acted as governor of Buda from September 1578 to the beginning of June 1580, ruling this important frontier province and, as well as acting as administrator and financial director there, functioned as a war leader and a diplomat (for this period of his life, see the study, with *mühimme defteri* documentation, of M.T. Gökbilgin, *Kara Üveys Paşanın Budin beylerbeyliği (1578-1580)*, in *Tarih Dergisi*, ii [1952], 16-34; also G. Dávid, *Incomes and possessions of the Beglerbegis of Buda in the sixteenth century*, in G. Veinstein (ed.), *Soliman le Magnifique et son temps*, Paris 1992, 389, giving the annual revenues received by him, latterly 913,014 aspers; and Cl. Römer, *Osmanische Festungsbesatzungen in Ungarn zur Zeit Murād III dargestellt anhand von Petitionen zur Stellenvergabe*, Vienna 1995, at 106 publishing a petition of Üweys and describing his seal).

For the rest of his career, Üweys held various governorships in the Arab lands, about which we are not well informed: governor of Aleppo 990-3/1582-5 (when his protégé, the historian Muṣṭafā 'Ālī [*q.v.*] was *tīmār defterdāri* of the province); of Damascus, 13 July to October 1585; then back at Aleppo; and finally recalled to Istanbul to take charge of the finances of the empire as *bashdefterdār* again with the rank of a *beglerbeg* (on 7 Rabī' I 994/26 February 1586). Finally, he was appointed governor of Egypt in Rabī' I 995/mid-February 1587 with the mission of re-ordering the province's finances, and died there in 1591, having been raised to the rank of vizier a year previously (for this chronology, see C. Fleischer, *Bureaucrat and intellectual in the Ottoman Empire. The historian Mustafâ 'Âlî (1541-1600)*, Princeton 1986, passim); a different chronology in F. Babinger, *Die osmanischen Statthalter von Damaskus*, in E.F. Weidner (ed.), *Festschrift Max Freiherrn von Oppenheim*, Berlin 1933, 1-7.

Bibliography: See the works of 'Ālī (*Künh ül-akhbār, Menshe' ül-inshā'* and *Lāyiḥat ül-ḥakīka* (who, not making the usual accusations of corruption and brutality, saw in Üweys a good financial director and a firm and just governor) and the histories of Selānikī and Pečewī; and the *Bibl.* to MURĀD III. Gökbilgin's researches in the *mühimme defterleri* remain to be continued.

(G. VEINSTEIN)

AL-**'UYAYNA**, an oasis in Nadjd [*q.v.*]. now in Saudi Arabia (lat. 25° 0' N., long. 46° 06'). It lies near the upper end of the Wādī Ḥanīfa [*q.v.*] some 50 km/30 miles northwest of the modern capital al-Riyāḍ.

In pre- and early Islamic times, al-'Uyayna lay in the territory of the Banū Ḥanīfa [see ḤANĪFA B. LUDJAYM], although it is not mentioned as such by early geographers like al-Hamdānī (who mentions another 'Uyayna in the territory of the Balḥārith in the Nadjrān region), al-Bakrī and Yāḳūt. Nearby at Thaniyyat al-Aḥīsā, identified in modern tradition with the present settlement of al-Djubayla, took place, according to older lore, the encounter between Khālid b. al-Walīd and Musaylima al-Kadhdhāb [*q.vv.*] in *ca.* 11/633 known as the battle of 'Aḳrabā or al-Yamāma [*q.vv.*].

Al-'Uyayna was always famous for its water resources, wells and springs (*'uyūn*), fed from the nearby hills. In the 9th/15th century the oasis passed into the hands of the local Mu'ammar family. It was there that the reformer Muḥammad b. 'Abd al-Wahhāb was born in 1115/1703 [see IBN 'ABD AL-WAHHĀB] at a time when the oasis was being ruled by 'Abd Allāh b. Muḥammad b. Mu'ammar, and he returned thither in *ca.* 1153/1740 and converted to his religious doctrines the then ruler 'Uthmān b. Mu'ammar. The oasis decayed in the 19th century, partly through political strife (Muḥammad b. Mushārī Mu'ammar had been briefly installed as ruler in al-Dir'iyya [*q.v.*] by the Egyptian general Ibrāhīm Pasha [*q.v.*] 1819-21) and partly through failure of the water supply. The English traveller W.G. Palgrave in 1862 found it an uninhabited field of ruins (*Narrative of a year's journey through Central and Eastern Arabia*, London 1965, i, 381-2), and over sixty years later, H.St.J.B. Philby described it still as "the abomination of desolation" (*Arabia of the Wahhabis*, London 1928, 72-6). More recently, however, agriculture and some prosperity have been restored to the region.

Bibliography (in addition to references in the article): Naval Intelligence Division. Admiralty Handbooks, *Western Arabia and the Red Sea*, London 1946, 263, 269; 'Abd Allāh b. Khamīs, *Mu'djam al-Yamāma*, 2 vols. Riyāḍ 1978, ii, 198-205; idem, *al-Dir'iyya al-'āṣima al-ūlā*, Riyāḍ 1982, 393-400.

(S.A. AL-RASHID)

'UYAYNA B. **ḤIṢN**, the charismatic chief of the Fazāra [*q.v.*] at the time of the Prophet Muḥammad. 'Uyayna ("one having prominent eyeballs") was a nickname, his real name being Ḥudhayfa. 'Uyayna b. Ḥiṣn b. Ḥudhayfa b. Badr b. 'Amr descended from famous warriors: his father led the Asad [*q.v.*] and Ghaṭafān [*q.v.*]; his grandfather, great-grandfather and great-great-grandfather commanded the forces of their own tribe, the Fazāra, and those of other tribes belonging to the Ghaṭafān group. 'Uyayna was called *waththāb* or "leaper, jumper" since before the advent of Islam he had attacked a certain tribe (i.e. in Arabia) and had then raided the Taghlib [*q.v.*] in the Djazīra.

At the time of Muḥammad, 'Uyayna, together with the whole military force of the Fazāra, participated in the siege of Medina, having been promised by the Jews the annual date crop of Khaybar [*q.v.*]. In Rabī' I 5/August-September 626 he concluded with Muḥammad a three-months' non-belligerency pact which guaranteed the safety of his herds when severe drought pushed them to grazing lands within Muḥammad's sphere of influence. Several months later, 'Uyayna attacked Muḥammad's milch camels pasturing near Medina. He undertook to assist in the defence of Khaybar (Muḥarram 7/May-June 628) in return for half its annual crop of dates, but deserted his Jewish allies before the battle began. Together with several fellow-Fazārīs he participated in the conquest of Mecca (Ramaḍān 8/January 630), and later he fought at Ḥunayn [*q.v.*] and al-Ṭā'if [*q.v.*]. According to some, 'Uyayna had already embraced Islam before the con-

quest of Mecca, but his listing among the *mu'allafa ḳulūbuhum* [*q.v.*] indicates that at Ḥunayn he was still an unbeliever. In Muḥarram 9/April-May 630, 'Uyayna—carrying out Muḥammad's order—attacked a subdivision of the Tamīm [*q.v.*] temporarily living amongst the Khuzā'a [*q.v.*]. Some said that he was one of Muḥammad's tax-collectors.

In the *ridda* he swore allegiance to the false prophet Ṭulayḥa al-Asadī, but later he returned to Islam. He lived at least to the days of 'Uthmān b. 'Affān, who was his son-in-law.

Islamic historiography is generally hostile to 'Uyayna, ascribing to him haughtiness coupled with the coarseness of desert dwellers (*djafā' sukkān al-bawādī*) and foolishness. 'Uyayna referred to Muḥammad's wife, 'Ā'isha bt. Abī Bakr [*q.v.*], as "this little woman of light complexion (*ḥumayrā'*)", and suggested an exchange between her and one of his own wives. Following this episode, Muḥammad told 'Ā'isha that 'Uyayna was "a fool obeyed [by his people]" (*al-aḥmaḳ al-muṭā'*). 'Uyayna accused 'Umar b. al-Khaṭṭāb of being ungenerous and unjust and told 'Uthmān that fasting at night was for him easier than during the day.

There is a dissenting voice, though, which is probably that of a Fazārī source: 'Uyayna told 'Umar to beware of the Persians (*'adjam*), showing him the place in his body where he would he stabbed. "Verily, there is counsel (*ra'y*) there", the fatally-wounded 'Umar later said, referring to 'Uyayna's place of dwelling.

Watt, *Muhammad at Medina*, Oxford 1956, index.

(M. Lecker)

'UYŪN MŪSĀ [see 'ayn mūsā].

'UYŪNIDS, a minor dynasty of mediaeval Arabia, whose capital was al-Ḳaṭīf [*q.v.*], ruling over al-Aḥsā/al-Ḥasā [*q.v.*] in eastern Arabia from the 5th-7th/11th-13th centuries. They destroyed the Ḳarāmiṭa [*q.v.*] there in 467/1076, though little is known of their history. They are reputed to be of Āl Ibrāhīm of Murra [*q.v.*], a *ḳabīla* of 'Abd al-Ḳays [*q.v.*]. Their influence rapidly declined in the 7th/13th century, when about the middle of the century the 'Uṣfūrids [*q.v.*] assumed control of the region.

Bibliography: 'Umar Riḍā Kaḥḥāla, *Mu'djam ḳabā'il al-'Arab*, iii, Beirut 1982, 1071; see also al-baḥrayn.

(G.R. Smith)

'UZAYR, a figure mentioned enigmatically in Ḳur'ān, IX, 30, as being called by the Jews "the son of Allāh" and usually identified by Muslim commentators with Ezra, or sometimes with the man who slept for a hundred years (II, 259). Modern scholars have suggested identifications also with the Biblical Enoch (Newby), Azazel (Casanova) and, fantastically, Osiris (Madjdi Bey).

Later Muslim authors who heard from Jews or Christians (see e.g. al-Djāḥiẓ, *al-Radd 'alā 'l-Naṣārā*, ed. J. Finkel, 27, 33) that this accusation of sonship had no basis, explained that only one Jew (Finḥāṣ) said this about 'Uzayr (al-Ṭabarī); only a small group of Jews worshipped 'Uzayr in some past period (Ibn Ḥazm); or that the verse—like v. 31—refers to the extreme admiration of Jews for their doctors of law ('Abd al-Djabbār, al-Ḳurṭubī, etc.).

Muslim Sunnī and Shī'ī authors (Ḳur'ān commentators, historians and authors of *Ḳiṣaṣ al-anbiyā'*) tell, mostly on the authority of Wahb b. Munabbih [*q.v.*], the story of pious 'Uzayr who miraculously remembered or recovered the lost Torah. The Children of Israel were so grateful to him that they worshipped him as the Son of God. Some also mention his questioning predestination (the story of the ants), whereupon God removed him from the list of prophets. Ibn Ḳutayba mentions in this context a *Munādjāt 'Uzayr* (see *'Uyūn al-akhbār*, ed. Y.A. Ṭawīl, Cairo 1973, ii, 76). Many details of these stories show great similarity to the *Vision of Ezra* (or the *Apocalypse of Ezra* usually referred to as "*II Esdras*" or "*Fourth Ezra*"), excerpts of which seem to have been known in Muslim circles from Christian Arabic translations (see A. Drint, *The Mount Sinai Arabic version of IV Ezra. Text, translation and introduction*, diss., Groningen University 1995, esp. introd. §§ 8-9, with a list on pp. 51-2 of Muslim authors who tell the story, and bibl.).

A negative image of 'Uzayr was developed by the Andalusī Ibn Ḥazm [*q.v.*], who took 'Azrā-'Uzayr the Scribe (*al-Warrāḳ*) to be the person who falsified the Hebrew Bible [see taḥrīf] and accused him of being a liar and a heretic who ridiculed the faith (see his *Faṣl*, i, 116-224). The later Jewish convert to Islam al-Samaw'al al-Maghribī (d. 1175) explained that Ezra interpolated into the Bible stories that sully David's origins (e.g. Gen. xix. 30-8) so as to prevent the rule of the Davidic dynasty during the second Temple (see his *Ifḥām al-Yahūd*, ed. and tr. M. Perlmann, 1964, text 62-63, tr. 60).

General accusations of falsification of the Scriptures by 'Uzayr, or by one of his disciples, can be found already with Muṭahhar al-Maḳdisī (*K. al-Bad' wa 'l-ta'rīkh*, ed. Cl. Huart, v, 29 ff.) and al-Djuwaynī (*Textes apologetiques de Ğuwainī* ed. M. Allard, Beirut 1968, 44, 47). They seem to echo various pre-Islamic sources, and were well-known and refuted by Christians and Jews (see e.g. A. Jeffery, *Ghevond's text of the correspondence between 'Umar II and Leo III*, in *Harvard Theol. Review*, xxxvii [1944], 269-332 and *Ibn Kammūna's examination of the three faiths*, ed. and tr. Perlmann, Berkeley 1967-71, text 90, tr. 53 ff.).

Through Ibn Ḥazm and al-Samaw'al, these accusations became the standard argument of mediaeval Muslim polemics against the Bible up to contemporary times (see *Tafsīr al-Manār*[2], x, 326).

(Hava Lazarus-Yafeh)

al-'UẒAYYIM [see al-'aḍaym].

UZBEK, ŪZBAK, ŪZBĪK [see özbeg].

UZBEKISTAN, the name for a region of Central Asia, literally "land of the Uzbeks/Özbegs", adopted after the imposition of Bolshevik rule in Central Asia as the designation of one of the component republics of the U.S.S.R., now a republic within the Commonwealth of Independent States.

1. In the pre-Soviet period

For the history of the region and its towns in these times, see bukhārā; farghāna; khwārazm; khīwa;

KHOḲAND; MĀ WARĀʾ AL-NAHR; MANGÎTS; ÖZBEG; SAMARḲAND; SHĪBĀNIDS; TASHKENT; TURKISTĀN. 1.

2. From 1920 to the present day

The territory which corresponds today to that of the Republic of Uzbekistan was split in 1920 between, on the one hand, the General Government of Turkistan under Bolshevik control, and on the other, the emirates of Khīwa and of Bukhārā, Russian protectorates which became people's republics the same year. The People's Republic of Bukhārā, headed by eminent reformists (*djadīds* [*q.v.*]) such as Fayḍ Allāh Khʷādjayev and ʿAbd al-Raʾūf Fiṭrat [*q.v.*], was still strongly imbued with Islam. In 1923, the Communist Party of Bukhārā was purged of its *djadīd* and "bourgeois" elements by Moscow and, in October 1924, the People's Republic gave birth to the Soviet Socialist Republic of Uzbekistan (SSRUz) which adopted the city of Tashkent as its capital in 1930. In 1929, what is now Tādjīkistān, which then belonged to the SSRUz, became an entirely separate Soviet Socialist Republic and in 1936, Karakalpakistan was attached to the SSRUz, within which it constituted an autonomous republic.

The new republic experienced difficult beginnings, as since 1918, the oriental regions of the former amīrate and of Farghāna had been the fief of the *amīr*'s supporters and of anti-revolutionaries, known by the name of *basmačis*, whom the Red Army succeeded in extirpating only in 1928 (in certain regions not until 1935-6). During the Stalin era, the anti-religious policy of Lenin was applied with greater severity, resulting in the demolition of Uzbek Islam with the suppression of religious tribunals (1924), of *madrasas* (1928), of *waḳf*s, and the closure of many mosques (1930). This induced the religious to operate in secret. Furthermore, the great schism between the old Central Asia, that of the *djadīds*, and the new, that of the Soviets, came about in the years 1937-9, at the time of the great Moscow purges, with the trials and executions of the leading ideologues of Muslim socialism, and those of representatives of Central Asian culture, all being *djadīds* (ʿĀlimdjān Ibrāhīmov, ʿAbd al-Raʾūf Fiṭrat, ʿAbd Allāh Ḳādirī, Tulugan Khʷādjamiyarov (Tawalla), ʿAbd al-Sulaymān (Čolpan), etc.) accused of being "bourgeois counter-revolutionary nationalists". Fayḍ Allāh Khʷādjayev, present in the highest echelons of power in Bukhārā between 1920 and 1924, then in Tashkent between 1925 and 1937, became a potent symbol for the victims of persecution. After 1939, the ruling clique of the SSRUz was thus radically remodeled.

In 1941, anxious for Central Asian support in his confrontation with the Nazi menace, Stalin made concessions with regard to Islam while maintaining his anti-religious policy: he thus created four religious boards of which one, based in Tashkent, exercised jurisdiction over the whole of Central Asia and Kazakhstan, appointing all the *muftīs*. The *muftī* of the SSRUz, Bābākhān b. ʿAbd al-Madjīd Khān, was the first in a dynasty of *muftīs* (his son and his grandson followed him) which was to reign over Central Asia until 1989. It was also in the Stalin period, in 1952, that the Mīr ʿArab *madrasa* of Bukhārā was re-opened.

Stalin died in 1953, but his policy of militant atheism was pursued by his successors Nikita Khrushchev, leader of the USSR until 1964, and Leonid Brezhnev, leader until 1983, along with a vigorous programme of Russification (Party cadres, language and history). In 1956, during the 20th congress of the Communist Party of the USSR, the murders committed by Stalin were denounced and numerous individuals were rehabilitated, including Fayḍ Allāh Khʷādjayev and ʿAbd Allāh Ḳādirī, the latter being considered the first great novelist of the modern Uzbek language. However, there was no question of rehabilitating the *djadīd* movement, still described as "reactionary".

The second key-date in the history of the SSRUz falls in 1960 with the arrival of Sharaf Rashīdov (d. 1983) who was to serve as first secretary of the Uzbek CP for 24 years, from 1959 to 1983 (he was also a member of the Praesidium). The weight of local and tribal rivalries, which Moscow was adept at exploiting, became increasingly decisive when the Farghānīs, in power since 1937, were replaced by the Samarḳandīs with Rashīdov. The latter were to remain until 1983, at which date the Farghānīs reappeared. Rashīdov inaugurated a relatively tolerant period, and thus between 1960 and 1970 writers were allowed more freedom to publish. In another context, in 1965 at the end of a violent anti-religious campaign launched by Khrushchev in 1954, the expression "parallel" Islam was coined to describe a clandestine Islam (cults of saints, illegal *madrasas*, Ṣūfī *ṭarīḳas*), of which some groups of devotees were to survive the Soviet period into the present day.

The third crucial phase in the history of the SSRUz followed the accession to power in the USSR, in 1983, of Yuri Andropov. This marked the beginning of a period of crisis between Moscow and the SSRUz which was to last until the republic's independence in 1991. The nationalism of the Uzbeks was censured, as was local corruption, and the system introduced by Rashīdov was virulently denounced, the latter being publicly accused of having encouraged nepotism, local solidarities and clientelism (he was rehabilitated, by I. Karīmov, in 1992). The "cotton affair" was the focus of multiple criticism, with accusations cast not only at the Uzbek mafia but also at its links with political circles; the SSRUz was seen as a mafia republic. But criticism went further in that Central Asian traditions were judged responsible for these deviations. It should, however, be noted that the objective of corruption was not invariably personal enrichment; it was often seen as a way of helping the community.

The purges begun under Andropov were pursued until the early years of Gorbachev; between 1983 and 1986, more than three-quarters of the members of the central committee of the SSRUz were replaced. However, the frontal attack by Moscow on the Uzbek élites increased popular support for the latter. It fell to Mikhail Gorbachev, on becoming First Secretary of the CP of the USSR in 1985, to pursue the reforms initiated by Andropov (who had died in 1984, being replaced for a few months by Konstantin Chernyenko) and continue the campaign against corruption. The period was symbolised by the concept of *Glasnost*, i.e. plain speaking and an end to secrecy. For Gorbachev, reforms in the economic sphere were inseparable from reforms conducted in the ideological, hence religious, sphere. Contemporaneously with the denunciation and replacement of the Uzbek élites in 1986, an anti-Islamic campaign was pursued from 1985 to 1988, although this failed to prevent a religious revival which had begun in the time of Andropov. Proving unpopular, Moscow's aggressive campaign was halted in 1988, and Gorbachev, embroiled in political difficulties, saw rapprochement with religion as a possible solution.

But the collapse of the Soviet system was imminent and a new reconstruction of the USSR was inaugurated, namely, *Perestroika*; this was to open the way to unexpected changes and to a revision of Leninism. This period saw the exposure of all the grievances of

the SSRUz towards Moscow—ethnic, linguistic, cultural, ecological and religious—hitherto concealed. This was also the beginning of the rewriting of the history of Central Asia (the *basmači* movement was presented as a movement of national struggle, the history of the amīrate of Khoḳand was studied once more, etc.). The review *Literature and Art of Uzbekistan* (*Ozbekiston Adabiyati va Sanati*), which in 1981 took the place of *Civilisation of Uzbekistan* (*Ozbekiston Madaniyati*) as the organ of the Union of Uzbek writers, was an important element in the cultural revival. Also appearing at this time were Perestroika clubs, including the Birlik (Unity) movement, founded in 1988 and becoming a political party. Uzbek became the official language in 1989. The opposition in Moscow seized on ecological issues such as the scandal of the Aral Sea, exposed in 1987, and the monoculture of cotton, which had had a drastic effect on the nation's water resources and on the health of a large section of the population (draining of the Aral Sea, contamination of water-sources, etc.). The production of cotton, which had increased between 1940 and 1980, was not to be reduced until 1990, under pressure from Islom Karīmov, the future "strong man" of the country.

Although religious freedom had been granted to Christians in Moscow since 1988 at the time of the festivities marking the millennium of the Russian Orthodox Church, the First Secretary of the Uzbek CP, Rāfiḳ Nishānov, continued to vilify Islam. Everything changed, however, in 1989 and 1990, following numerous demonstrations which stimulated an acceleration of religious revival (re-opening of a number of mosques, return of the clergy to public life, expulsion of the last of the dynasty of Uzbek *muftīs*, Shams al-Dīn Bābākhān, and his replacement by Muḥammad Ṣādiḳ Muḥammad Yūsuf, who took an active part in all areas). The new economic conditions and nationalist fervour led to a number of inter-ethnic conflicts, e.g. the massacre of Meskhet Turks in Farghāna in 1989 and Kirghiz-Uzbek confrontation at Osh in 1990, and the departure of numerous Russians back to Russia.

Appointed First Secretary of the Uzbek CP by Moscow in 1989, Islom Karīmov (Islām Karīm) was to guide the SSRUz towards independence on 1 September 1991, less than a year after his declaration of sovereignty and a few months after the failed putsch of August 1991 and the disintegration of the USSR. The 23rd Congress of the Uzbek CP saw its transformation, in September of the same year, into a "Democratic Party of the People". Of the two other existing opposition parties, Birlik and Erk (Liberty), the latter having broken away from the former in 1990, only Erk participated in the presidential elections of December 1991 which were won by Karīmov with 86% of the votes.

The year 1990 may be considered the third key-date in the history of the SSRUz since it was then that revenge was taken for the purges of 1986; following the Congress of the Uzbek PC, the Central Committee was reconstituted, with three-quarters of its members being replaced. On becoming President of the Republic of Uzbekistan (RU), Karīmov maintained collaboration with Moscow, and in December 1991 the nation joined the Commonwealth of Independent States, to which it is currently (1999) still linked. Between 1992 and 1993, the opposition was muzzled: the leaders of the Birlik and Erk parties (ʿAbd al-Raḥīm Polaov and Muḥammad Ṣāliḥ, respectively) were forced into exile. In 1994, new parties emerged in Uzbekistan: the Patriotic Progressive Party (Vatan Taraqqiēti), the Justice Party (Adolat) and the Party of National Renewal (Milli Tiklanish). In May 1995, following a referendum, Karīmov was confirmed in his post as President of the Republic until the year 2000.

From 1991 onward, de-Russification and return to Central Asian cultural traditions regarded as patrimony (*miros* [*mīrāth*]) became the norm. The nation was engaged in a veritable quest for identity. Names of individuals and toponyms were changed, as were the names of streets, squares, etc., and hitherto prohibited books were published: these included the Ḳurʾān, *ḥadīth* collections, the poems of Aḥmad Yasawī [*q.v.*] and the works of *djadīd* authors. The Uzbek language was purged of Russian words and neologisms were created, some of them borrowed from Čaghatay or from Persian (there was even a course for the teaching of Čaghatay, inaugurated by religious elements at Namangan, in Farghāna, in 1990-1). In 1993, a law was passed calling for the replacement of the Cyrillic by the Latin alphabet in the year 2000, but the chosen alphabet was modified in 1995 and its adoption deferred until 2005 (a different Latin alphabet had already been used in Uzbekistan between 1927 and 1940).

Uzbekistan has ceremoniously rehabilitated some of the great figures of Central Asian history (Tīmūr, Ulugh Beg), of Central Asian Islam (Abū ʿĪsā al-Tirmidhi, Ismāʿīl al-Bukhārī), of *djadīd*ism (ʿAbd Allāh Ḳādirī) and of Ṣūfism (Aḥmad Yasawī, Bahāʾ al-Dīn Naḳshband). Numerous cultural traditions have been revived, such as the festival of Nawrūz and the wearing of the traditional head-dress (*dopi*). The RU respects the majority of Islamic traditions: religious festivals or *toy* (*mawlūd*, Ramaḍān, etc.), fasting, Pilgrimage to Mecca, even the cult of saints under certain conditions. But it is waging a ruthless war against all forms of fundamentalism, and keeping a close watch on its frontiers with Afghānistān and Tādjīkistān. In 1990, it banned the Uzbek branch of the Party of Islamic Rebirth (Islom Uyghonish Partiyasi) which had just been constituted; as a result of this, the Islamists were forced underground. Subsequently, in 1992, an Islamic insurrection at Namangan (Farghāna), led by the Adolat (Justice) movement, which sought to establish an Islamic state in the region, was violently suppressed. Between 1993 and 1996, numerous religious figures and Islamists were arrested, in Tashkent and in Farghāna, many of them former members of the Islamic Rebirth Party. As for official Islam, the Perestroika *muftī*, Muḥammad Ṣādiḳ Muḥammad Yūsuf, reckoned too independent and disrespectful of authority, was replaced in 1993 by ʿAbd Allāh Mukhtār (Mukhtaržan) (the latter being assisted by the former *muftī* Shams al-Dīn Bābākhān). Furthermore, Karīmov has taken pains to control the activities of foreign missionaries in his land, expelling Saudi Wahhābīs and Turkish Nurdjus, and prohibiting the publication in 1994 of the Turkish religious journal *Zaman-Uzbekistan*, issued by the Nurdjus.

As for traditional Islam, it no longer needs to be clandestine as hitherto. Pilgrimage to the tombs of saints is a widespread practice, the most important of these being that of Bahāʾ al-Dīn Naḳshband at Bukhārā, but is controlled by the spiritual board. Healers (*bakhshī*) and popular exorcists (*emči*, *darger*) are no longer troublesome. Branches of the Naḳshbandiyya [*q.v.*] *ṭarīḳa* which survived Soviet persecution today represent a traditional Islam, opposed to fundamentalism, which plays an ever increasing role in the direction of the *madrasas* and the schools for *ḳārīs*, in particular in Farghāna. Since 1991 these *ṭarīḳas*, centred on Khōḳand and Andidjān, have extended their

network of activities and become gradually implanted in other provinces of Uzbekistan, in neighbouring republics, in particular in Kazakhstan and Tādjīkistān, and in Russia. In accordance with the law guaranteeing "freedom of conscience and religious association" (1991), the RU is a centre, in addition to the "Spiritual Board of the Muslims of Transoxiana" for three other religions, sc. the Russian Orthodox Church, the Baptists and the Seventh Day Adventists. In the monetary sphere, in 1994, the RU began issuing its own national currency, known as *sum*.

The RU, formerly the SSRUz, is the most densely populated region of Central Asia with a population of 23 million inhabitants in 1996; it had numbered 4.3 million in 1913 and 8.1 million in 1959. In 1992, this population consisted of 71% Uzbeks, 8% Russians, 5% Tadjiks, 4% Kazakhs and 2% Karakalpaks.

(TH. ZARCONE)

UZGEND, UZKEND [see ÖZKEND].

UZUN ḤASAN B. ʿALĪ b. ḲARA YOLUḲ ʿUTHMĀN, Abū Naṣr, born in 828/1425, died in 882/1478, and together with his grandfather, one of the most celebrated rulers of the line of Aḳ Ḳoyunlu Turkmens [*q.v.*] and a statesman and military commander of genius.

Expanding from his family's base in Diyār Bakr [*q.v.*], Uzun ("the Tall") overcame his Ḳara Ḳoyunlu [*q.v.*] Turkmen rivals, and in the east defeated his rivals for control of Persia, the Tīmūrids [*q.v.*], reigning 861-82/1457-78 over a powerful and extensive state which comprised western Persia and Kirmān as far as the borders of Khurāsān, ʿIrāḳ to the shores of the Persian Gulf, Armenia, eastern Caucasia and eastern Anatolia. He was the resolute opponent of the Ottomans; he co-existed somewhat uneasily on the borders of ʿIrāḳ and eastern Syria with the Mamlūks [*q.v.*]; and he was sought as an ally, by diplomacy and by the actual supplying of military equipment, by the Papacy and Western European powers, above all the Republic of Venice, also much concerned with aggressive Ottoman policies of conquest. His illness and death in middle age removed a major impediment to Ottoman expansion eastwards, one which was only checked a generation later by the advent to power in Persia of the Ṣafawids [*q.v.*].

Rivalries of the Turkoman tribes

The original fief of the chiefs of the house of Bayundur and of their Turkoman tribe "of the White Sheep" (Aḳ Ḳoyunlu) was in Diyār Bakr (from before the period of Tīmūr). From there they spread to the west, north and east. At first, the chief rivals of the Aḳ Ḳoyunlu were the Ḳara Ḳoyunlu Turkmens. That there were any religious differences involved, as Minorsky asserted in his *EI*[1] article, is problematical. The Aḳ Ḳoyunlu certainly showed themselves as Sunnīs, but the presence of any significant adherence to Shīʿism amongst the Ḳara Ḳoyunlu, apart from the general currents of sympathy for a folk-Shīʿism discernible amongst many of the Turkmen groups in eastern Anatolia, is dubious.

Ḳara Yoluḳ ʿUthmān died after a reign of more than thirty years in 839/1435. His son ʿAlī Beg spent his reign fighting with his brother Ḥamza against whom he sought the support of the Ottoman sultan Murād II and the Mamlūk sultan Čaḳmaḳ of Egypt. After the death of the two brothers, Djihāngīr, son of ʿAlī, resumed the struggle against the Ḳara Ḳoyunlu but offended his brother Uzun Ḥasan, his uncle Ḳāsim Beg (whom von Hammer, *GOR*[2], i, 506, calls Ḥasan) and the governor of Erzindjān, Ḳïlïdj Arslan b. Pīr ʿAlī. In spite of his quarrel with Djihāngīr, Uzun Ḥasan defeated his two adversaries and then conquered the "greater number" of the begs of Kurdistān. Having

learned that Djihāngīr had set out for the summer encampments on the Ala-dagh (this name probably refers to the ancient Masius, a mountain between Diyār Bakr and Mārdīn), Ḥasan penetrated into the fortress of Diyār Bakr (Āmid) in disguise, while Djihāngīr was forced to shut himself up in Mārdīn [*q.v.*]. This took place in 858/1454, and soon Ḥasan occupied Ruhā and laid siege to Mārdīn (see ʿĀshiḳ-pāshā-zāde, 247-9; Münedjdjim-bashî, iii, 157).

The intervention of Ḥasan's mother, a female diplomat who played a great part in later developments, forced Uzun Ḥasan to return to Diyār Bakr. He sought to recompense himself by a raid on Ḳara Ḳoyunlu territory (Erzerūm, Awnik, Bayburt), but having failed to take Erzindjān returned to Diyār Bakr.

On resuming the siege of Erzindjān, Uzun Ḥasan fell from his horse and was seriously injured. Djihāngīr seized the opportunity to sack the environs of Āmid, but on Ḥasan's return sought refuge with the Ḳara Ḳoyunlu Djihān Shāh. His mother once more installed Ḥasan in Diyār Bakr and Djihāngīr in Mārdīn. The struggle was very soon resumed on a larger scale. Ḥasan marched on Erzindjān and Turdjān, from which he drove ʿArab Shāh, his brother's representative, and then attacked Khurāsān and Ḳaradja-Dagh (to the southwest of Diyār Bakr). The Ḳara Ḳoyunlu Djihān Shāh sent his *amīrs* to the help of Djihāngīr, but Uzun Ḥasan defeated them in 861 (May 1457?; cf. Ibn Taghrībirdī, *Nudjūm*, ed. Popper, vii, 485). Djihāngīr gave his son as a hostage, and another brother of Ḥasan (Uways of Ruhā) also submitted to him. Uzun Ḥasan installed the *amīr* Khurshīd Beg (perhaps his cousin; cf. Münedjdjim-bashî, iii, 376) in Erzindjān. This fortress was the key to the Armenian plateau. About the same time, Ḥasan gave shelter to the Ḳara Ḳoyunlu Ḥasan ʿAlī, who had rebelled against his father Djihān Shāh, but had soon to expel him on account of his heretical opinions. These events occupied the years 858-61/1454-7, after which began the rapid rise of Ḥasan and the extension of his influence over the neighbouring lands.

Operations in Kurdistān

On the Tigris, he took Ḥiṣn Kayfā from the Kurdish *maliks* descended from the Ayyūbids (see Bidlīsī, *Sharaf-nāma*, ii, 149-55) and gave this fortress to his son Khalīl. Siʿirt and Haytham (in Bohtān) were later occupied (see also *ibid.*, ii, 9).

Uzun Ḥasan between Ḳaramān and Trebizond

In the west, the successes of Uzun Ḥasan brought him into conflict with the Ottomans, who under the leadership of Meḥemmed II Fātiḥ had just completed the subjection of the Turkmen [*q.v.*] beyliks of Anatolia. The princes of Ḳaramān [*q.v.*], gravely threatened by the Ottomans, endeavoured to enter into an alliance with their eastern neighbour Uzun Ḥasan. On the other hand, Uzun Ḥasan became involved in the affairs of the Byzantine empire of Trebizond, which was then almost at its end. In 1458, the last emperor of Trebizond, David, gave Uzun Ḥasan the daughter of his brother and predecessor Kalo-Joannes, named Catherine, in marriage (in Europe she is more often called by her title Despina; cf. the Venetian travellers). Trebizond was closely linked with Georgia, while Venice and Rome were closely watching events in these two Christian states. The Muslim sources entirely neglect this complex of international political interests (cf. W. Miller, *Trebizond, the last Greek Empire*, London 1926; Bekir Sıtkı Baykal, *Fatih Sultan Mehmed-Uzun Hasan rekabetinde Trabzon meselesi*, in *Tarih Araştırmalar Dergisi*, ii [1964], 67-81).

The embassies sent by Uzun Ḥasan to Istanbul in 1457 and 1460 revealed to the sultan his rival's ambitions (cf. von Hammer, i, 464-6). Very soon passing to action, Uzun Ḥasan took by surprise the fortress of Ḳoyunlu Ḥiṣār (or Koylu Ḥiṣār on the Kilkit-su above Nīksār) and sacked the suburbs of Toḳat and Amasya (cf. Münedjdjim-bashî, iii, 376).

Having disposed of the Isfendiyār-oghlu [*q.v.*] of Sinope, Meḥemmed II turned his attention to Trebizond and, first of all, to Ḳoyunlu Ḥiṣār. Uzun Ḥasan concentrated his forces near Kemākh, but the detachment sent into the mountains of Munzur (Saʿd al-Dīn, i, 476: *kūh-i Mndz?*) was defeated by Aḥmed Pasha. Uzun Ḥasan then sent his mother to negotiate, and on her appeal the sultan turned towards Bulghar-daghî (east of Gerdjanis, between the Kilkit-su and the Euphrates). In spite of the renewed appeals of Sāra Khātūn (the sultan called her "mother"), who said that Trebizond belonged to her daughter-in-law, the town was taken in 865/1461 and the Comneni dispossessed and exiled. A portion of the treasures taken in Trebizond was given to Sāra Khātūn (ʿĀshiḳ-pāshā-zade, 159-60; Saʿd al-Dīn; Münedjdjim-bashî, iii, 376).

The peace was of short duration, for according to Münedjdjim-bashî, iii, 160-1, Uzun Ḥasan retook Ḳoyunlu Ḥiṣār and advanced as far as the environs of Sīwās, but the Ottomans defeated those of his troops who had entered Anatolia. Uzun Ḥasan sent to Istanbul Khurshīd Beg to ransom the Turkmen prisoners and ask the sultan to renounce his claims on Trebizond. In view of the circumstances (*iḳtidā-yi waḳt*), the request is said to have been granted (! ?) and Uzun Ḥasan returned to Erzindjān and then to Diyār Bakr. (In this part of his story, Münedjdjim-bashî seems to give in somewhat different form the events of 865/1461.)

Death of Djihān Shāh and of the Tīmūrid Abū Saʿīd

Uzun Ḥasan very soon achieved brilliant successes. In 871/1466-7 his rival Djihān Shāh of the Ḳara Ḳoyunlu, who at this time held all Persia, marched on Diyār Bakr (on his plans, see his letter to Meḥemmed II, in Ferīdūn Bey, i, 273). Uzun Ḥasan collected troops and received reinforcements from Mārdīn. On 1 Rabīʿ II 872, Djihān Shāh had reached Mūsh and Čapākhčūr. Here his advance guards were defeated by Sulṭān Khalīl, son of Uzun Ḥasan. Djihān Shāh, who, on account of the excessive cold, had sent most of his troops home, went back to Kīghī, whence he wanted to reach Erzindjān and the valley of Bālā-rūd (Kilkit?). On 13 Rabīʿ II 872/11 Nov. 1467, Uzun Ḥasan attacked him unexpectedly and Djihān Shāh lost his life while trying to escape. The field in the east now being open, Uzun Ḥasan began the conquest of the lands which had been left without a master. He went via Mawṣil to Baghdād, which he besieged for 40 days, but in Ādharbāydjān, the son of Djihān Shāh, Ḥasan ʿAlī, had assembled a large army (Khwāndamīr, *Ḥabīb al-siyar*, iii, 234: 180,000 men) and invoked the help of the Tīmūrid Abū Saʿīd, who set out from Khurāsān in Shaʿbān 872/March 1468 and appointed governors for the whole of Persian ʿIrāḳ. As a result of treachery on the part of certain *amīrs* of Ḥasan ʿAlī, his army quartered at Marand broke up, and Uzun Ḥasan seized the opportunity to advance as far as Ḳarabāgh [*q.v.*]. In the meanwhile, in spite of the protestations of friendship by Uzun Ḥasan, who recalled the loyalty of the Aḳ Ḳoyunlu to the Tīmūrids, Abū Saʿīd had reached Miyāna, but was caught there by the approach of winter. He thought of spending the winter in Ḳarabāgh [*q.v.*], out of which Uzun Ḥasan was to be dislodged, but his march to the Araxes was

disastrous and at Maḥmūdābād [see MŪḲĀN] he was blockaded by Uzun Ḥasan. The negotiations conducted by Abū Saʿīd's mother, however, came to nothing; he took to flight but was captured on 16 Radjab 873/11 Feb. 1469. Two days later, Uzun Ḥasan, seated on the throne (to emphasise his accession?), received the prisoner kindly, but on 22 Radjab Abū Saʿīd was handed over to his rival, the prince Yādigār Muḥammad b. Sulṭān Muḥammad b. Baysunḳur, who put him to death. Abū Saʿīd's *amīrs* were put under the command of Yādigār who, supported by Uzun Ḥasan, began the struggle against Ḥusayn Bayḳara. The latter was temporarily driven from Harāt (6 Muḥarram 875/5 July 1470), but the exactions of the sons of Uzun Ḥasan (Khalīl in Öläng Rādkān and Zaynal in Ḳuhistān) provoked a rising against Yādigār, who was deposed and put to death by Sultan Ḥusayn Bayḳara.

After the disappearance of Abū Saʿīd, the Tīmūrids of Khurāsān remained a purely local dynasty, while Uzun Ḥasan's deputies occupied the remainder of Persia, including Kirmān, Fārs, Luristān, Khūzistān and Kurdistān (see the valuable details on the distribution of the fiefs in the letters of Uzun Ḥasan to Meḥemmed II: Ferīdūn Bey, i, 275, 276; cf. *Ḥabīb al-siyar*, iii, 330). The governorship of Iṣfahān was entrusted to Uzun Ḥasan's eldest son Oghurlu Muḥammad, but that of the more important province of Fārs went to the latter's slightly younger half-brother Sulṭān Khalīl. The discontented Oghurlu Muḥammad was in fact to rebel in 879/1474, but on the appearance of his father's army (see below), fled to Baghdād and thence to the Ottomans. We possess a precious *ʿarḍ-nāma* composed by the well-known scholar Djalāl al-Dīn al-Dawānī (d. 908/1502 [*q.v.*]) which describes a review of the Aḳ Ḳoyunlu provincial army of Fārs during Sulṭān Khalīl's time (see V. Minorsky, *A civil and military review in Fārs in 881/1476*, in *BSOS*, x [1939-42], 141-78). The Ḳara Ḳoyunlu Ḥasan ʿAlī had retired to Hamadhān, but was surprised there and killed by Uzun Ḥasan's forces in 873/1468 (see the *History of the Ḳuṭb-Shāhs*, B.N. ms. Pers. 174, fol. 16b). About the same time, Baghdād also was occupied by the great *amīr* Khalīl-Beg, governor of Mawṣil (Ferīdūn Bey, ii, 276).

After these great successes, it became evident that Uzun Ḥasan alone in Asia was strong enough to bar the Ottoman advance and the enemies of the latter, the rulers of Ḳaramān and the Christians, particularly the Venetians, sought to exploit this new power.

Venetian policy

On 2 Dec. 1463, the Venetian Senate had adopted the plan of an alliance with Uzun Ḥasan and L. Quirini was sent to Persia with this object. On 13 March 1464, the first ambassador from Uzun Ḥasan (a certain Mamenatazab?) arrived in Venice and spent six months there. In 1465 Ḳāsim Ḥasan (?) arrived with a letter from Uzun Ḥasan. The negotiations were interrupted for some time, but the conquest of Euboea (which the Venetians had held for 264 years) by the Ottomans in 1469-70 threw them into consternation. In February 1471, Quirini returned from Persia with Uzun Ḥasan's ambassador Mirath (Murād?), while another Persian representative arrived at the Vatican. It was then that the Venetian Senate sent to Persia the noble Caterino Zeno, who through his mother was a nephew of Despina Caterina, wife of Uzun Ḥasan. On 20 April 1471, Zeno was in Tabrīz. In the same year, Ḥādjdjī Muḥammad (Azimamet) came to Venice with a request for arms and munitions. Giosafa Barbaro was then sent to Persia to take to Uzun Ḥasan six large mortars (*bombarde*), 600 arquebuses (*spingarde*), matchlocks (*schioppetti*), and munitions; 200 fusiliers with their officers accompanied the consignment. In Barbaro's secret instructions (of 11 Feb. 1473), it was laid down that Venice would never conclude peace with the Ottomans until they had been forced to renounce in favour of Persia all claims on Asia Minor as far as the Straits. Barbaro was delayed in Cyprus where he took part in the operations of the Venetian fleet (commanded by P. Mocenigo), which on the appeal of the princes of Ḳaramān, had occupied Silifke and two other points on the coast.

In the meanwhile, Zeno was active in Persia and, according to the European sources (Jorga, ii, 164), the nephew of the last Comnenus, who had sought asylum with Uzun Ḥasan, had invaded the region of Trebizond.

Invasion of Asia Minor

The Ḳaramānids were working alongside of the Venetians to force Uzun Ḥasan's hand. On the appeal of Pīr Aḥmad, Isḥāḳ's successor, Uzun Ḥasan equipped an army which was placed under the command of the vizier ʿUmar Beg b. Bektash (the Amarbei Guisultan Nichenizza? of Zeno, 16) and Uzun Ḥasan's cousin Yūsufča Mīrzā, and which (according to Angiolello, 77) numbered 50,000 men (Zeno, 16: 100,000?). These troops advanced from Diyār Bakr on Toḳat, which they sacked and then on Ḳayṣariyya, where, as Saʿd al-Dīn says, "they revealed their Turkmen character". Caterino Zeno, 18-19, was an eye-witness of a part of these operations. (The attempt to take Bīra from Egypt is perhaps connected with the same expeditions.) After some time, ʿUmar Beg returned to Diyār Bakr while Yūsufča Mīrzā overran Ḳaramān and Ḥamīd again.

Resumption of the war with the Ottomans

Meḥemmed II was gravely concerned with these events and with this diplomatic activity of which he was certainly aware (see Ferīdūn Bey, 285; Ibn Iyās, *Badāʾiʿ al-zuhūr*, ii, 145). Uzun Ḥasan's letters assumed a more and more aggressive tone (see Ferīdūn Bey, i, 278, and the humiliating title of *imārat maʾāb* was given to the sultan in them; and Meḥemmed II's reply, *loc. cit.*, in which he addresses familiarly the *sardār-i ʿadjam*). In autumn 877/1472, the sultan crossed from Istanbul over to the coast of Asia, but was held up there by the cold season. But by 14 Rabīʿ I 877/19 Aug. 1472), the prince Muṣṭafā and the *beglerbegi* of Anatolia Dāwūd Pasha, who had a force of 60,000 men under him, destroyed the Turkmens in the district of Ḳir-eli (west of Konya).

Meḥemmed set out in Shawwāl 877/March 1473. His army numbered 100,000 men in all (cf. Saʿd al-Dīn, i, 529, confirmed by Angiolello, 79-80, who writes as if he were in the Ottoman army). The famous *aḳinči* [*q.v.*] ʿAlī Mikhāl-oghlu [see MĪKHĀL-OGHLU] sent with the advance guard sacked Kemākh and took prisoner the Armenians of this region.

Uzun Ḥasan, who had arrived in the region of Erzindjān in late Rabīʿ I 878, end of July 1473, established himself on the hills on the left bank of the Euphrates, and when Khāṣṣ Murād Pasha rashly crossed the river, he surrounded him and defeated him. Khāṣṣ Murād was drowned in the Euphrates and the total losses of the Ottomans rose to 12,000 men (Angiolello). Caterino Zeno, who was in Uzun Ḥasan's suite, gives 1 Aug. 1473 as the date of this first encounter. The battlefield was in the district of Terdjān (above Erzindjān); the low ground on the Euphrates which Khāṣṣ Murād (Angiolello) wished to utilise begin at the level of Pekeridj. Saʿd al-Dīn, i, 535, is not explicit, but according to Angiolello (and

Zeno), the Ottomans were ready to abandon the campaign. They left the valley of the Euphrates, and leaving Bayburt on the right (towards the northeast), took the road northwards towards Trebizond, evidently with the intention of turning there to the west. But while the Ottoman army was in the canton of Üč-agh̲ïzlï (probably to the north of the mountains which separate Erzind̲j̲ān from the valley of the Kilkit-su), Uzun Ḥasan's troops appeared on the heights of Otluḳ-beli (a mountain which separates the Euphrates valley from the sources of the Čorokh̲) on the right flank of the Ottomans. The latter accepted battle and on 16 Rabīʿ I 878/12 Aug. 1473 (according to Zeno, 10 Aug. 1473) routed the Aḳ Ḳoyunlu army. The *Sardār* of Uzun Ḥasan, Kāfir Isḥāḳ (a Christian?; according to Zeno, there were Georgians in the Aḳ Ḳoyunlu army), fell on the battlefield, as did Uzun Ḥasan's son Zaynal. Uzun Ḥasan himself took to flight, but it was not so precipitous as Saʿd al-Dīn would have it, for Zeno's account of 18 August is dated from the camp of Uzun Ḥasan, four days from Erzind̲j̲ān. In any case, the Ottomans, thanks to their firearms (Zeno), gained a brilliant victory. The captured artisans and experts were taken to Constantinople. The Ḳara Ḳoyunlu mobilised by Uzun received their liberty; the remainder of the Turkmens were put to death (*katl-i ʿāmm*) by order of the sultan. Dārāb Beg, commander of [S̲h̲abīn-] Ḳara Ḥiṣār on the Kilkit-su above Ḳoyunlu Ḥiṣār, hearing of the defeat of his master, handed over the fortress to the Ottomans. On the advice of the Grand Vizier Maḥmūd Pas̲h̲a, who explained the difficulties of keeping the territories still to be conquered, the sultan refrained from pursuing Uzun Ḥasan, but later regretted this decision and the Grand Vizier lost his office (Saʿd al-Dīn, i, 521-44).

Uzun Ḥasan lost no appreciable territory by this defeat, but the moral effect must have been considerable. After the battle, Uzun Ḥasan wrote to Venice (Berchet, 137) that he was going to return to the attack (*cavalcheremo adosso à l'Othoman*) and at the same time sent Caterino Zeno on a mission to plead his cause with the European governments. The Polish and Hungarian ambassadors were sent back with Zeno.

The Venetian Senate, which always attached great importance to the alliance, sent to Persia the secretary P. Ognibene. Barbaro, leaving at Rhodes the representatives of the pope and of King Ferdinand of Sicily, then set out and arrived in Tabrīz on 12 April 1474. Lastly, a new envoy, A. Contarini, left Venice on 13 Feb. 1474, arrived at Tabrīz on 4 Aug. 1474 and at Iṣfahān on 4 Nov. 1474. We also know that at this time the friar Lodovico of Bologna was in Persia, saying that he represented the Duke of Burgundy. But on this occasion, the ambassadors could obtain nothing definite out of Uzun Ḥasan.

In the meanwhile, Uzun Ḥasan had gone to S̲h̲īrāz to put down the rebellion of his son Og̲h̲urlu Muḥammad (see above). On his return from Tabrīz he took leave of Contarini (26 April 1475) who saw a review of his troops (25,000?) but said that the expedition against the Ottomans was postponed to a later date. In 880/1475-6 the plague wrought great havoc in Persia, and Uzun Ḥasan's troops had to take the field against his brother Uways, who was defeated and slain at Ruhā (Ibn Iyās, ii, 160). Very soon the Venetians recognised the futility of their hopes, and less than a year after the death of Uzun Ḥasan signed a peace with the Ottomans (December 1478).

Relations with Georgia

According to Müned̲j̲d̲j̲im-bas̲h̲ï, Uzun Ḥasan thrice invaded Georgia, in 871/1466, in 877 (summer of 1472?) and after his defeat by the Ottomans. According to the *D̲j̲ihān-ārā* this last expedition took place in 881/1476-7; Barbaro (90) who was an eye-witness, took part in the negotiations with the Georgians. The Georgian sources of the 15th century are very confused (Brosset, *Histoire de la Géorgie*, ii/1, 12, 249). The king of K'art'lia, Constantine III (1469-1505) seems to have utilised the support of the Aḳ Ḳoyunlu against his rivals Bagrat of Imerethia and the Atabeg of Akh̲altsikh̲e (Ḳwarḳware < Ḳorḳora).

Relations with Egypt

The frontier between the original fief of Uzun Ḥasan (Diyār Bakr) and the lands of the Mamlūk sultans of Egypt lay roughly along the bend of the Euphrates. The Egyptian historians alone (used by Weil, *Gesch. der Chalifen*, v) tell us of the extensive relations between the Aḳ Ḳoyunlu and the Burd̲j̲ī Mamlūks. The rivalry with the Ottomans forced Uzun Ḥasan to deal very tactfully with the ruler of Cairo (we have references to them from 861/1456), but on the other hand, he had to seek an exit to the Mediterranean in order to be in contact with the Venetians. The lands on the right bank of the Euphrates belonging to the rulers of Egypt and Syria thus formed an impediment to him, and Uzun Ḥasan endeavoured to round off his lands at the expense of the Mamlūks.

In 868/1463-4 the Kurds who had seized the stronghold of Gargar (on the right bank of the Euphrates to the southeast of Malaṭya) sent its keys to Uzun Ḥasan, who in 869/1465 restored Gargar to the *wālī* of Aleppo but at the same time recompensed himself by taking K̲h̲arpert (then occupied by Arslan Dulg̲h̲adïr) and by ravaging Abulastayn [see ELBISTĀN and D̲H̲U 'L-ḲADR].

In 877/1471, Kakh̲tā [*q.v.*] and Gargar were occupied by Uzun Ḥasan's troops, but the *amīr* Yes̲h̲bek al-Dawādār sent by Ḳā'it Bāy [*q.v.*] drove the Aḳ Ḳoyunlu out of Bīra (see Ibn Iyās, ii, 140-4, and Behnsch, *Rerum seculo XV*, in *Mesopotamia gestarum liber*, Breslau 1838, *sub anno* 1783 [1471]). The Ottoman ambassador sent to Cairo stirred up feeling against Uzun Ḥasan, the ally of the Christians, but Ḳā'it Bāy acted with prudence. The *amīr* Rustam and the *ḳāḍī* Aḥmad b. Wad̲j̲īn, who were leaders of the ʿIrāḳ *ḥad̲j̲d̲j̲* in 877/1473, succeeded in getting the *k̲h̲uṭba* read in Medina in the name of *al-malik al-ʿādil Ḥasan al-Ṭawīl k̲h̲ādim al-ḥaramayn*, but the *Amīr* of Mecca, Muḥammad b. Barakāt (see Ibn Iyās, iii, 514), arrested Rustam and his companion and sent them to Ḳā'it Bāy, who a few months later liberated them "to please Uzun Ḥasan" (*ibid.*, ii, 145-6). In 880/1475 Og̲h̲urlu Muḥammad, fleeing from his father, was supported by the Aleppan troops but the latter suffered a severe reverse (*ibid.*, ii, 152). In 882/1477 Ḳā'it Bāy visited the line of the Euphrates and re-established the situation.

Death of Uzun Ḥasan

Returning from Tiflīs, Uzun Ḥasan fell ill, and at the age of 54 died at Tabrīz on the eve of the feast of Ramaḍān of 882/night of 5-6 Jan. 1478, which agrees exactly with Barbaro's statement, 93, sc. the Eve of Epiphany.

The historians (*Ḥabīb al-siyar*, iii, 330; *D̲j̲ihān-ārā*; Müned̲j̲d̲j̲im-bas̲h̲ï, iii, 165) praise his justice and piety. He created many pious endowments (*k̲h̲ayrāt wa-ḥasanāt*). On his mosque in Tabrīz, see TABRĪZ. 2. The *Akh̲lāḳ-i D̲j̲alālī* of Dawānī is dedicated to Uzun Ḥasan. The astronomer ʿAlī Ḳus̲h̲čī lived at the court of Uzun Ḥasan and was sent as ambassador to the Ottoman court (see ʿALĪ AL-ḲŪS̲H̲D̲J̲Ī).

Administrative system

From a lack of documentation, our knowledge of

Uzun Ḥasan's administrative system is sketchy, but Minorsky discerned that the Aḳ Ḳoyunlu rulers apparently endeavoured, under cover of strengthening "Islamic institutions", to introduce an element of centralisation into the system that had originally evolved under the Mongol Il-Khānids [*q.v.*]. It seems that they wished to halt the decline of central authority resulting from the extensive grants of land for salaries, pensions, etc., which were meant to be temporary but which often in practice became hereditary [see e.g. IḲTĀʿ; SOYŪRGHĀL; TIYŪL]. There survive in Turkish archives some examples of Uzun Ḥasan's financial regulations enacted for Diyār Bakr and eastern Anatolia, and Persian historians occasionally mention the *dastūr* and *ḳānūn* of Uzun Ḥasan, which seems to have been applied at least up to the time of the second Ṣafawid Shāh Ṭahmāsp I; but this was probably a fixing and codification of existing, local, customary law rather than a new financial system. On the other hand, he behaved like many other rulers of the time in arbitrarily raising existing taxes and imposing new ones in order to finance his wars. See W. Hinz, *Das Steuerwesen Ostanatoliens im 15. und 16. Jahrhundert*, in *ZDMG*, c (1950), 177-201; A.K.S. Lambton, *Landlord and peasant in Persia*, London 1953, 101, 122-3; Minorsky, *The Aq-Qoyunlu and land reforms*, in *BSOAS*, xvii (1955), 449-62.

The family

The blood of the Aḳ Ḳoyunlu princes was considerably mixed. The mother of Ḳara ʿUthmān, to begin with, was the princess Maria of Trebizond (see the *Chronicle* of Michael Panaretos, ed. Fallmerayer).

Despina, whom Uzun Ḥasan married when he was thirty-four, was certainly not his first wife and in 1471, when her nephew Caterino Zeno visited her, she was living at Kharpert far from the court. She had remained a Christian and was buried in a church of Diyār Bakr (Barbaro, 84). According to Angiolello, 73, Uzun Ḥasan had one son and three daughters by her; the son (Jacob ?) is said to have been strangled by his brothers after the father's death (?). Despina's daughter Martha (whom the *Silsilat al-nasab-i ṣafawiyya*, Berlin 1843, 68, calls Bägi Aḳā; *Ḥabīb al-siyar*: Ḥalīma Begi Aḳā; and Münedjdjim-bashi: ʿĀlam-Shāh Begum) was given in marriage to Shaykh Ḥaydar of Ardabīl and became the mother of the Ṣafawid Shāh Ismāʿīl I (the mother of Shaykh Ḥaydar, Khadīdja Begum, was the sister of Uzun Ḥasan).

The oldest son of Uzun Ḥasan, Muḥammad, was the son of a Kurdish *umm walad* (cf. Ibn Iyās, ii, 160; Caterino Zeno, 36; Contarini, 173). In 879/1474, after a rising in Shīrāz, he took refuge for some time with the Ottoman Bāyezīd II, but was finally killed in Persia by his father's orders (Ibn Iyās, ii, 59).

Uzun Ḥasan's principal wife (*mahd-i ʿulyā*) was Saldjūḳ-Shāh Begum, who played a very active part in the government (cf. *Taʾrīkh-i Amīnī*, fol. 198b). Her sons were Sulṭān Khalīl, Yaʿḳūb, Yūsuf (and perhaps Masīḥ). We do not know the name of Zaynal's mother.

Uzun Ḥasan's viziers were Shams al-Dīn Muḥammad b. Sayyid Aḥmad, Burhān al-Dīn ʿAbd al-Ḥamīd Kirmānī and Madjd al-Dīn Shīrāzī (*Ḥabīb al-siyar*, iii, 330).

Bibliography: For older sources and studies, see Minorsky's *EI*[1] art. The best consideration of sources for the Aḳ Ḳoyunlu in general is now John E. Woods' *The Aqquyunlu* (see below), 16-37, much of which is relevant for Uzun Ḥasan's career and reign. Especially notable is the *Kitāb-i Diyārbakriyya* of Abū Bakr Ṭihrānī-Iṣfahānī (ed. Necati Lügal and Faruk Sümer, 2 vols. Ankara 1962-4), which was written for Uzun Ḥasan and his son Sulṭān Khalīl between 875/1469 and 883/1478, with the ms. going up to 876/1472. General Persian historians like Khwāndamīr contain further information, whilst for Uzun Ḥasan's external relations there is much in the Arabic historiography of the late Mamlūk period and the diplomatic material in Italian archives. The Istanbul archives and libraries have relevant material, especially that relating to Uzun Ḥasan's wars with the Ottomans, and this includes captured letters, intelligence reports, etc., plus *defters* from eastern Anatolia. *Inshāʾ* collections like Ferīdūn Bey's *Münsheʾāt ül-selāṭīn* contain relevant documents, whilst Jean Aubin has described and discussed some Aḳ Ḳoyunlu documents from Persia. Some Aḳ Ḳoyunlu inscriptions from Persia have been published, including one of Uzun Ḥasan's at the Great Mosque of Yazd.

Of recent studies (in addition to those mentioned in the article), see Minorsky, *La Perse au XV*[e] *siècle entre la Turquie et Venise*, Publs. de la Société des études iraniennes 7, Paris 1933, 6-7 (also in *The Turks, Iran and the Caucasus in the Middle Ages*, Variorum, London 1978, no. XII); ʿAbbās al-ʿAzzāwī, *Taʾrīkh al-ʿIrāk bayn al-iḥtilālayn*, iii, *al-Ḥukūma al-turkmāniyya*, Baghdād 1357/1939; Mükrimin Halil Yınanç, *İA* art. *Akkoyunlular*; F. (V. MINORSKY-[C.E. BOSWORTH])

AL-ʿUZZĀ, a pre-Islamic Arabian deity. The name means "The very powerful" or "The all-powerful". On its own, in the pre-Islamic period, it always takes the article (Liḥyanite *hn-ʿzy*, Old Arabic *ʾl-ʿzy*, Nabataean *ʾl-ʿz* plus the Aramaic form *ʿzyʾ*, and South Arabian *ʿzyn*), but in theophoric personal names, and occasionally in sources of the Islamic period, this is sometimes omitted (e.g. South Thamudic *tm-l-ʿzy* as against *tym-ʿzy*, J. Ryckmans, in *SI*, v [1956], 11). A variety of such compounds occurs in pre-Islamic North Arabian inscriptions, though by the rise of Islam only *ʿAbd al-ʿUzzā* is reported in the Ḥidjāz (J. Wellhausen, *Reste arabischen Heidentums*, [2]Berlin 1897, 39).

Very little is known of the nature of al-ʿUzzā. Attempts to identify her with the planet Venus are only achieved through a tenuous series of equations with other deities in which each divinity is assumed to be endowed with all aspects of the others (see references in Wellhausen, 40-5). From this, efforts have been made to equate her with the goddess Aphrodite (e.g. H.W.J. Drijvers, *Cults and beliefs at Edessa*, Leiden 1980, 185); with Ruḍā (A.G. Lundin, in R.G. Stiegner (ed.), *Al-Hudhud*, Graz, 1981, 215-6); with ʿAzīzū at Palmyra (Drijvers, *op. cit.* 152, 162-3); with al-Lāt (Wellhausen, 44-5), with al-Lāt and Manāt (Fahd, *Le panthéon de l'Arabie centrale*, Paris 1968, 176-7), and ultimately with a "common Semitic great goddess" representing a wide variety of astral and chthonic forces (Wellhausen,

45; Lundin, *loc. cit.*; Fahd, *loc. cit.*). The only unequivocal equation of al-ʿUzzā with the planet Venus is in the 10th-century Syriac-Arabic dictionary of Bar Bahlūl (ed. R. Duval, s.v. *estʿrā*); while the only explicit equation of al-ʿUzzā with Aphrodite, is in a 1st century B.C. to A.D. Nabataean-Greek bilingual inscription from the Greek island of Cos (F. Rosenthal, *Die aramaistische Forschung*, Leiden, 1964, 86 and 91 n. 4). Henninger has noted that these strained identifications are based on non-Arab sources from the northern borderlands of the Peninsula and cannot be assumed to apply to Arabia as a whole, or to the cult of al-ʿUzzā in Mecca in particular (in *Anthropos*, lxxi [1976] 136-9). It is possible, but at present unprovable, that al-ʿUzzā was considered by her worshippers to have some of the features of Aphrodite and/or to be in some way a manifestation of the planet Venus, but there is not enough evidence to establish exactly how she was conceived in any particular region or period.

The only representations of al-ʿUzzā which are identified as such in inscriptions, are Nabataean: plain, rectangular baetyls with stylised eyes (e.g. M.R. Savignac, in *Revue Biblique*, xliii [1934] 586-9), of a type common throughout western Arabia, both as divine symbols and as grave markers. However, there are similar baetyls in Petra and the surrounding region representing al-Kutbā, Atargatis, Isis, etc.

In the early centuries A.D. the worship of al-ʿUzzā is found in the Ḥawrān (RES, 2091, *ʾl-ʿzʾ ʾlht bṣ[rʾ]*, "the goddess of Boṣra"), Petra (e.g. RES, 1088), Wādī Ramm (Savignac *loc. cit.*), Sinai (CIS, ii, 611, 1236, each by a *kāhin* of al-ʿUzzā), Dedān (JSLih 58), a Sabaeo-Arabic text from Ḳaryat al-Faw in central Arabia (Ja 2138, see J. Ryckmans, in *JSS*, xxv [1980], 197-8), and (probably as an import from the north) in Sabaic, Qatabanian, and possibly one Minaic, inscriptions (*ibid.*, 196-7).

In the 5th century A.D., Isaac of Antioch speaks of the "Arabs" (*ʿarbāyē*) sacrificing to *ʿuzzī* (ed. Bickell, i, 210-11) and, in the 6th century, there is evidence that she was worshipped by the La**kh**mid royal house in southern Mesopotamia. Al-Mun**dh**ir IV swore by al-Lāt and al-ʿUzzā (*A**gh**ānī*[1], ii, 21 l. 5 from the bottom) and sacrificed prisoners to her (Zacharius of Mitylene, ed. J.P.N. Land, in *Anecdota Syriaca*, iii, 247) while another La**kh**mid prince, al-Nuʿmān, submitted a dispute to her judgement (*Ḥamāsa*, 116).

The Islamic sources suggest that, by the 7th century, worship of al-ʿUzzā was firmly entrenched in Mecca and its environs (Hi**sh**ām Ibn al-Kalbī, *K. al-Aṣnām*, ed. A. Zakī Pa**sh**a, Cairo 1914, 27, tr. N.A. Faris, *The book of idols*, Princeton 1952, 22). Her main sanctuary was in a valley called Ḥurāḍ in Na**kh**lat al-**Sh**aʾmiyya on the road from Mecca to al-Ṭāʾif (Yāḳūt, iv, 765 ff.; Ibn al-Kalbī, 18, tr. 16). Here, in Suḳām, a side ravine of Ḥurāḍ, Ḳuray**sh** dedicated to her a *ḥimā* [*q.v.*] which vied with the *ḥaram* [*q.v.*] or Sacred Territory of the Kaʿba, (Ibn al-Kalbī, 19, tr. 17). At Na**kh**la were three *samura* (acacia) trees, from one of which the goddess revealed herself in the form of an Abyssinian woman with dishevelled hair, when **Kh**ālid b. al-Walīd was sent by the Prophet to cut them down (idem, 25-6, tr. 21-2). A sacred stone was the object of *ziyāra* (Wellhausen, 39), though it is not clear whether this was in the same sanctuary or elsewhere (cf. Doughty's account of the veneration of al-ʿUzzā in the form of a large stone at al-Ṭāʾif, *Travels in Arabia Deserta*, [2]London 1923, ii, 511, 515-16). Finally, there was a cave called **Gh**ab**gh**ab which contained baetyls (Ibn al-Kalbī, 20-1, tr. 18-9) and into which the blood of sacrificed animals was poured (Ibn Hi**sh**ām, 55 l. 6). The man credited with introducing the worship of al-ʿUzzā, Ẓālim b. Asʿad of **Gh**aṭafān, constructed over her a sanctuary which he called, allegedly after the name of a volcanic mountain, Buss (see Wellhausen, 37-8; Fahd, *op. cit.*, 165-6) and from which "oracular communications" were received (Ibn al-Kalbī, 18, tr. 16).

The sanctuary of al-ʿUzzā at Na**kh**la was served by members of the Banū Sulaym [*q.v.*], who were clients of Ḳuray**sh**, and the last such *sādin*, Dubayya b. Haramī al-Sulamī, was killed by **Kh**ālid b. al-Walīd in 8/629-30 (Ibn al-Kalbī, 22, 24-7, tr. Atallah, 19-22). Ibn al-Kalbī insists on the extreme devotion of Ḳuray**sh** to this goddess. As well as *ziyāra* and sacrifice they held an annual festival in her honour (Wellhausen, 39), while the Prophet himself recalled offering a white sheep to al-ʿUzzā "while I followed the religion of my people" (*ibid.*, 19, tr. 16-17). His uncle, Abū Lahab (whose *ism* was ʿAbd al-ʿUzzā) was known for his "intense loyalty" to her (*ibid.*, 23, tr. 20). When in 3/624-5, Abū Sufyān set out to attack Muḥammad he took with him the symbols of al-ʿUzzā and al-Lāt (al-Ṭabarī, i, 1395) and one version of his war-cry is "al-ʿUzzā is for us and not for you" (*ibid.*, i, 1418). ʿAbd al-Muṭṭalib took a dispute over water-rights to the *kāhin* of ʿUzzā in al-**Sh**aʾm (Ibn Ḥabīb, *al-Munammaḳ fī a**kh**bār Ḳuray**sh***, Ḥaydarābād 1964, 98-9).

She was also worshipped by **Gh**aṭafān, **Kh**uzāʿa, Kināna, **Th**aḳīf (though their principal deity was Manāt), **Gh**anm, **Gh**anī and Balī (though Wellhausen, 39, considered that the last three may not have worshipped her at Na**kh**la). Among the *talbiyāt* (or ritual invocations intoned by pre-Islamic tribes on their pilgrimage to Mecca [see TALBIYA]), those of the Ḥums, Ma**dh**ḥi**dj** and **Th**aḳīf submit al-ʿUzzā, along with al-Lāt, Manāt, and other *aṣnām* ("idols") to the High God of Mecca, the Lord of the Kaʿba (M.J. Kister, in *JSAI*, ii [1980], 36-8, 54-5 (nos. 41, 45, 48), and cf. 51 no. 12). On the co-existence of the idols and the High God, see *ibid.*, 47-9 and references there (to which add W.M. Watt, in *Isl.*, lvi [1979], 205-11), and compare the oath of Dirham b. Zayd al-Awsī, "By the Lord of al-ʿUzzā the propitious, and by God betwixt whose House [and Suḳām] Sarif stands" (Ibn al-Kalbī, 19, tr. 18).

In the Ḳurʾān, al-ʿUzzā is mentioned only once, in LIII, 19-20 ("Have you considered al-Lāt and al-ʿUzzā and Manāt, the third, the other"), which is said to have been followed by the "Satanic verses". These three are traditionally described as the *banāt Allāh*, though this phrase does not occur in the Ḳurʾān and has been applied to them by extrapolating from sūras XVI, 57; XXXVII, 149-53; XLIII, 16; and LIII, 21. However, the phrase *banāt Allāh* may originally have meant no more than "celestial beings" (Watt, *Muhammad at Mecca*, Oxford 1953, 106) and is paralleled in the 1st century A.D. by a Palmyrene votive text to the *bnt ʾl* (**Kh**. al-Asʿad and J. Teixidor, in *CRAI* [1985], 286-93) and probably even earlier by Qatabanic and Sabaic dedications to the *bnty ʾl* (i.e. the dual) and *bnt ʾl* (pl.), with in no case any indication as to the identity of these beings (Ryckmans, in *JSS*, xxv [1980] 200-3).
